1

QUARK DEGREES OF FREEDOM IN A FEW NUCLEON SYSTEM

1.1.	A. V. RADYUSHKIN. QCD of the few quark systems	2
1.2.	V.A. RUBAKOV. Nucleon decay and the parameters of the sigma model	17
1.3.	V. VANAGAS. The hamiltonians of the constant non-Abelian fields	28
1.4.	J. M. NAMYSLOWSKI. Non-perturbative corrections of quark forces in nucleon	37
1.5.	M. K. BANERJEE. A chiral model of N and Δ with vector mesons	46
1.6.	I. M. NARODETSKII. Hadron interactions in the quark compound bag model	55
1.7.	K. BRÄUER. NN-interaction and the quark-model in the frame of the resonating group method	71
1.8.	I. I. OBUKHOVSKY. Quark configurations and the core problem in NN-forces	80
1.9.	N. M. PETROV. Phenomenological consideration of six-quark states in few-nucleon systems	93
1.10.	L. S. KISSLINGER. The hybrid quark-hadron model and its applications	99
1.11.	I. Z. MACHABELI. The group approach to the investigation of the six quark system	113
1.12.	M. M. MUSAKHANOV. On the role of the quark and meson degrees of freedom in the weak P-odd nucleon-nucleon interactions	121
1.13.	V. D. KEKELIDZE. Observation of a narrow baryon resonance — a possible five-quark state	130
	POSTER PAPERS	139

*) The name of speakers are presented only.

2

HADRON-HADRON INTERACTION

2.1.	K. KILIAN. Physics with antiprotons at LEAR	142
2.2.	I. S. SHAPIRO. Some topics on low-energy antibaryon physics	160
2.3.	P. D. BARNES. The hyperon-nucleon interaction in hypernuclear systems	173
2.4.	R. A. KVATADZE. Search for narrow dibaryon resonances	188
2.5.	Yu. E. POKROVSKII. The QCD model of hadron cores of the meson theory. The structure and interaction of hadrons and dibaryon resonances	197
2.6.	I. I. STRAKOVSKY. Experimental situation for the $\pi^+d \rightarrow pp$ reaction and diproton resonances	209
2.7.	R. MACHLEIDT. A consistent meson-theoretic description of the NN-interaction	218
2.8.	D. W. L. SPRUNG. Recent progress in understanding the deuteron	234
	POSTER PAPERS	248

3

FEW BODY PROBLEMS

3.1.	L. P. KOK. Few-body problem with Coulomb interactions	252
3.2.	S. P. MERKURIEV. Few body systems in the configuration space	269
3.3.	R. I. JIBUTI. Hyperspherical approach to the solution of the Faddeev equations	284
3.4.	Yu. A. KUPERIN. New results on the numerical solving of the Faddeev equations	294
3.5.	R. J. SLOBODRIAN. Direct evidence on the three body force in the deuteron break-up near threshold	304
3.6.	J. V. MEBONIA. Unitarity effect in the processes of three-particle scattering	313
3.7.	I. V. CHUVILO. Investigation of the $^3\text{H-p}$ and $^3\text{He-p}$ interactions at medium energies	323

3.8.	I. V. SIMENOG. A model-independent description of few-body system with strong interaction	332
	POSTER PAPERS	340

4

RELATIVISTIC FEW BODY SYSTEMS

4.1.	F. GROSS. Relativistic effects in few body systems	344
4.2.	S. N. SOKOLOV. Coordinates in relativistic hamiltonian mechanics	359
4.3.	A. A. KHELASHVILI. Relativistic equations for the two fermion bound states and quarkonium problem	373
4.4.	G. RUPP. Relativistic two- and three-nucleon calculations with separable potentials	382
4.5.	V. R. GARSEVANISHVILI. Light front formalism for a few body systems and some of its applications	387
4.6.	L. L. FRANKFURT. Investigation of few-nucleon systems in hard nuclear processes, light cone dynamics and QCD	396
4.7.	W. GRUEBLER. Polarization effects in π -d scattering: a search for dibaryon-resonances	407
4.8.	A. I. MACHAVARIANI. Reactions in π NN-NN systems in the frame of quantum-field approach	421
4.9.	E. E. Van FAASSEN. Relativistic NN scattering equations with isobaric degrees of freedom	430
	POSTER PAPERS	436

5

ELECTROMAGNETIC INTERACTIONS

5.1.	P. V. SOROKIN. Photodisintegration experiments on lightest nuclei	440
5.2.	C. CIOFI degli ATTI. Electro- and photo-disintegration of three-particle systems and relativistic wave functions	463
5.3.	S. V. TRUBNIKOV. The deuteron: relativistic and non-relativistic approaches and the extraction of the neutron charge form factor	480

5.4.	B. GOULARD. Mesonic exchange currents in 3-nucleon systems	491
5.5.	A. A. VOROBYOV. Muon catalyzed fusion as a method for investigation of some few body systems	505
5.6.	A. L. ZUBAREV. μ -mesic atoms and μ -mesic molecules	514
	POSTER PAPERS	523
	LIST OF PARTICIPANTS	525
