

# INDICE

A. MOLINARI - Preface . . . . .	pag.	xI
B. D. DAY - Brueckner-Bethe calculations of nuclear matter.		
1. Introduction . . . . .	»	1
2. Derivation of coupled-cluster equations . . . . .	»	2
3. First approximation to the coupled-cluster equations: lowest-order Brueckner theory . . . . .	»	20
4. Approximation beyond lowest-order Brueckner theory: the hole-line expansion . . . . .	»	37
5. Tests of the hole-line expansion and alternative approximations: the Bochum truncation and generalized ring series	»	54
6. Summary . . . . .	»	65
Appendix . . . . .	»	69
S. ROSATI - FHNC variational theory for strongly interacting Fermi systems.		
1. Introduction . . . . .	»	73
2. Correlated wave functions . . . . .	»	75
2'1. Correlation and distribution functions . . . . .	»	75
2'2. Expansion of the squared Slater determinant . . . . .	»	78
2'3. Expectation value of the kinetic energy . . . . .	»	81
3. Cluster expansion . . . . .	»	82
3'1. State-independent correlation functions . . . . .	»	82
3'2. The cluster expansion . . . . .	»	84
3'3. Diagrammatic rules for Jastrow state-independent correlation factor . . . . .	»	86
3'4. State-independent correlations and irreducible cluster expansion . . . . .	»	88
3'5. Fermi hypernetted-chain equations . . . . .	»	91
3'6. Numerical solution of the FHNC equations . . . . .	»	97

4. Applications of the FHNC method . . . . .	pag. 98
4'1. Choice of the correlation factor $f(r)$ . . . . .	» 98
4'2. The hard-sphere Fermi system . . . . .	» 100
4'3. Calculations for a simple nuclear-matter model . . . . .	» 103
Appendix A. - The excitation value of the kinetic energy in terms of the distribution functions . . . . .	» 106
Appendix B. - Energy expectation value at the second and third order of the cluster expansion . . . . .	» 109

#### D. M. BRINK – Hartree-Fock mean-field theories in finite nuclei.

1. Introduction . . . . .	» 113
2. The one-body density matrix . . . . .	» 115
3. The Hartree-Fock mean-field approximation . . . . .	» 116
3'1. . . . .	» 116
3'2. The time-dependent Hartree-Fock equation . . . . .	» 118
3'3. The random-phase approximation . . . . .	» 120
3'4. Adiabatic TDHF approximation . . . . .	» 122
4. Effective interactions . . . . .	» 125
4'1. Skyrme's effective interaction . . . . .	» 125
4'2. Density-dependent interactions . . . . .	» 131
4'3. Gogny's interaction . . . . .	» 133
4'4. The BKN interaction . . . . .	» 133
4'5. Realistic interactions . . . . .	» 134
4'6. Which effective interaction? . . . . .	» 134
5. Landau parameters . . . . .	» 135
6. Some recent calculations . . . . .	» 137

#### R. LEONARDI – Sum rule approach to the nuclear collective motion.

1. Introduction . . . . .	» 143
2. Strength function, energy-weighted sum rules and polarizabilities . . . . .	» 144
3. Time-dependent state of the perturbed system and the dynamic polarizability . . . . .	» 148
4. The dynamic polarizability of the harmonic oscillator . . . . .	» 151
5. Effective mass, effective restoring force and polarizability . . . . .	» 154
6. The polarizability in the Hartree-Fock approximation . . . . .	» 156
7. The Hartree-Fock polarizability and RPA sum rules . . . . .	» 158
8. RPA sum rules for specific excitation operators $F$ . . . . .	» 160
9. Static polarizability and $S_{-1}$ sum rule . . . . .	» 167

**I. TALMI – Simple models of complex nuclei.**

1. Introduction. Effective interactions . . . . .	pag. 172
2. Collective states and interacting bosons. . . . .	» 178
3. Pairing and seniority for identical nucleons . . . . .	» 188
4. Coupling of valence protons and neutrons. . . . .	» 200
5. The interacting-boson model . . . . .	» 206

**H. FESHBACH – Hadron-nucleus interactions.**

1. Introduction . . . . .	» 216
2. Proton-nucleus scattering in the multiple-scattering approximation . . . . .	» 218
3. Pion-nucleus scattering . . . . .	» 231
4. Hypernuclei . . . . .	» 250
5. The collision of ultrarelativistic hadron projectiles with nuclei . . . . .	» 258

**T. E. O. ERICSON – Pion condensation and critical effects.**

1. Purpose of lectures . . . . .	» 277
2. Trivial $\pi^-$ condensation . . . . .	» 278
3. Pions in external fields (or potentials) . . . . .	» 279
4. Scalar external potential $U(\mathbf{x})$ . . . . .	» 280
5. Velocity-dependent potential . . . . .	» 282
5'1. Essence of $\pi$ nuclear optical potential . . . . .	» 282
5'2. States in a uniform velocity-dependent potential . . . . .	» 283
6. Condensation in an external field . . . . .	» 287
7. Neutron matter model for «spin-isospin sound» . . . . .	» 291
8. Critical effects in $\pi$ condensation . . . . .	» 294
8'1. Pion field in the static limit . . . . .	» 295
8'2. Nuclear critical opalescence . . . . .	» 298

**G. VENEZIANO – Quantum chromodynamics.**

1. Introduction: QCD as a gauge theory . . . . .	» 304
2. Classical chromodynamics (CCD) . . . . .	» 306
3. Quantization and renormalization . . . . .	» 308
4. The short-distance regime . . . . .	» 311
5. The large-distance regime . . . . .	» 314

**S. FUBINI – Spontaneous breaking of symmetries.**

Chiral symmetry . . . . .	» 318
1. General properties . . . . .	» 318

2. Effective Lagrangians . . . . .	pag. 322
3. The Higgs mechanism. . . . .	» 329
 T. REGGE - Unified gravity theories. . . . .	
	» 333
 M. L. RISTIG - Momentum distributions in quantum fluids and nuclear matter.	
1. Introduction . . . . .	» 340
2. Bose formalism . . . . .	343
2'1. Structure of one-body density matrix . . . . .	» 343
2'2. Hypernetted-chain equations . . . . .	» 346
2'3. Uniform limit . . . . .	» 348
2'4. Low temperatures . . . . .	» 349
3. Bose fluids . . . . .	» 351
3'1. Charged-boson matter . . . . .	» 351
3'2. Spin-aligned hydrogen . . . . .	» 354
3'3. Liquid $^4\text{He}$ . . . . .	» 355
4. Fermi formalism . . . . .	» 357
4'1. Decomposition of functions $n(r)$ and $n(k)$ . . . . .	» 357
4'2. Fermi HNC equations . . . . .	» 359
4'3. Approximations . . . . .	» 361
5. Fermi fluids . . . . .	» 363
5'1. Electron plasma . . . . .	» 363
5'2. Model nuclear matter. . . . .	» 365
5'3. Fermi hard-sphere system. . . . .	» 367
5'4. Liquid $^3\text{He}$ and $^3\text{He}\uparrow$ . . . . .	» 368
 S. BOFFI - Single-particle response of finite nuclei.	
1. Introduction . . . . .	» 373
2. Relevant definitions. . . . .	» 374
3. Natural-orbital basis . . . . .	» 377
4. The spectroscopic-amplitude equation . . . . .	» 378
5. Discrete spectrum. . . . .	» 380
6. Continuous spectrum . . . . .	» 382
7. ( $e, e'p$ ) reactions . . . . .	» 386
7'1. Electron-nucleon interaction . . . . .	» 387
7'2. Spectral strength . . . . .	» 389
7'3. Comparison with experiment . . . . .	» 390
8. ( $\gamma, p$ ) reactions . . . . .	» 393
8'1. Direct mechanism . . . . .	» 394
8'2. Final-state interactions . . . . .	» 394
8'3. Comparison with experiment . . . . .	» 396
9. Conclusions. . . . .	» 400

**F. PALUMBO – Spin-isospin phases in nuclear matter and in nuclei.**

1. Introduction . . . . .	pag.	403
2. OPE potential . . . . .	»	403
3. Nuclear binding by the OPE potential . . . . .	»	405
4. Connection with pion condensation . . . . .	»	406
5. One-dimensional localization . . . . .	»	407
6. Role of the core of $NN$ potential . . . . .	»	408
7. Isospin and parity in SIP . . . . .	»	408
8. Coherent effects of a weak axial neutral current . . . . .	»	409
9. SIP without spatial order . . . . .	»	410

**M. B. JOHNSON – Self-consistent theory of hadron-nucleus scattering. Application to pion physics.**

1. Introduction . . . . .	»	412
2. Open questions . . . . .	»	414
3. Self-consistent hadron-nucleus scattering . . . . .	»	417
4. Realization of self-consistent theory in a model . . . . .	»	419
5. Solution of the self-consistent theory, first order . . . . .	»	424
6. Solution of the self-consistent theory, second order . . . . .	»	430
7. Comparison of self-consistent theory to experiment . . . . .	»	433
8. Summary and discussion . . . . .	»	437

**M. ERICSSON – Precursor phenomena of pion condensation. » 441**

**R. G. LEICHT and B. ZIEGLER – Photon scattering by plane polarized photons.**

1. Introduction . . . . .	»	454
2. The formalism of photon scattering . . . . .	»	455
2'1. The scattering cross-section . . . . .	»	455
2'2. Polarization . . . . .	»	456
2'3. Angular distributions . . . . .	»	457
2'4. « Magic » angle $\theta = 120^\circ$ . . . . .	»	458
2'5. Efficiencies for interference effects . . . . .	»	459
2'6. Inelastic scattering . . . . .	»	460

**U. GASTALDI and R. KЛАPISCH – The LEAR project and physics with low-energy antiprotons.**

1. Introduction . . . . .	»	462
2. The low-energy antiproton facility . . . . .	»	463

<b>3. Physics . . . . .</b>	<b>pag. 473</b>
3'1. Introduction . . . . .	» 473
3'2. Protonium . . . . .	» 475
3'2.1. The $\bar{p}p$ atomic cascade and the initial state of $\bar{p}p$ annihilation . . . . .	» 476
3'2.2. Protonium spectroscopy . . . . .	» 476
3'3. Baryonium . . . . .	» 479
3'4. Annihilation . . . . .	» 488
3'5. The proton electromagnetic form factor in the time- like region . . . . .	» 492
3'6. Charmonium fine spectroscopy with LEAR as mini- collider . . . . .	» 496
3'7. Other experiments . . . . .	» 497
3'7.1. Search for heavy hypernuclei . . . . .	» 498
3'7.2. Mass-spectrometric measurement of $\bar{p}p$ mass difference . . . . .	» 498
<b>R. CENNI - <math>\Delta</math> and <math>\pi</math> propagation in infinite nuclear matter.</b>	<b>» 504</b>
<b>M. JAMINON, C. MAHAUX and P. ROCHUS - The shell model potential from a relativistic Hartree-Fock approach.</b>	
1. Introduction . . . . .	» 513
2. The relativistic quantum field model . . . . .	» 514
3. Hartree approximation . . . . .	» 515
3'1. Relativistic form . . . . .	» 515
3'2. Nonrelativistic form . . . . .	» 517
3'3. Wine bottle bottom shape . . . . .	» 520
4. Hartree-Fock approximation . . . . .	» 522
4'1. Schrödinger-equivalent potential in nuclear matter . .	» 522
4'2. Hartree-Fock approximation . . . . .	» 523
5. Discussion . . . . .	» 525
<b>S. STRINGARI and E. LIPPARINI - Symmetry energy and the dipole excitation strength.</b>	<b>» 527</b>
