v Preface

Chapter 1: Nuclear structure

Section 1.1: Introduction, theory and general contributions

- 1–14 Recent progress in nuclear structure physics
P von Brentano
- 15–25 The interacting boson model and strongly deformed nuclei
F Iachello
- 26–27 Interacting bosons close to and far from magic nuclei
Y K Gambhir, P Ring and P Schuck
- 28–37 Bandmixing and the IBA
R F Casten and D D Warner
- 38–45 E2 transitions in deformed nuclei and the IBA
D D Warner and R F Casten
- 46–48 Structure of IBA wave functions in transition regions
R F Casten and D D Warner
- 49–51 MI transitions in even–even deformed nuclei and the IBA
D D Warner
- 52–53 Is it possible to test the interacting boson approximation?
V Paar
- 54–55 A quasiparticle cluster–vibration model (QVCM) and the particle-number projection rule
K Allaart, P Hofstra and V Paar
- 56–58 The parabolic rule (PR) for odd–odd nuclei (proton–neutron PR and proton–phonon–neutron PR)
V Paar and S Brant
- 59–60 The SU(6) particle – quadrupole phonon coupling model in the SU(3) limit and the signature effect
V Paar and S Brant
- 61–62 Asymptotic wave functions for particle–vibration coupling with the SU(3) limit of the SU(6) quadrupole phonon model
V Paar and L F Canto
- 63–74 Do we understand all low-lying collective states near closed shells?
K Heyde, P Van Isacker, G Wenes, M Waroquier, J Sau and J Van Maldeghem

- 75–88 Low-energy collective and single-particle excitations
P Quentin, J Libert, M Meyer and J Sauvage-Letessier
- 89–103 Band structure and nuclear dynamics
G Scharff-Goldhaber
- 104–106 Scaling properties of nuclear deformations
F Brut and R Arvieu
- 107–108 Attenuation of the recoil term in the particle–rotor model
G Vandenput
- 109–120 Recent results of shell-model calculations (regularities in spectra)
P W M Glaudemans
- 121–132 Relevance of high-precision spectroscopy in nuclear structure research
H G Börner, G Barreau, S A Kerr and K Schreckenbach
- 133–146 Complementarity of charged-particle and (n, γ) reactions
J A Cizewski
- 147–160 Spectroscopy of 2p states and 3p states
K Abrahams, M G Delfini, J B M de Haas, J Kopecky, J F A G Ruyl, F Stecher-Rasmussen and T A A Tielens

Section 1.2: Nuclear spectroscopy

- 161–162 The $^{23}\text{Na}(\vec{n}, \vec{\gamma})^{24}\text{Na}$ reaction
T A A Tielens and J Kopecky
- ⊖ 163–164 Precise gamma energies up to 8 MeV and complete (n, γ) level schemes of ^{28}Al and ^{36}Cl
H H Schmidt, P Hungerford, H Daniel, T von Egidy, B Krusche, K P Lieb, R Brissot, G Barreau, H G Börner, S Kerr, C Hofmeyr and R Rascher
- 165–166 Precision determination of γ -ray energies from the $^{27}\text{Al}(n, \gamma)$ reaction and the level scheme of ^{28}Al
P A Sushkov, V L Alexeev, L P Kabina, I A Kondurov and D D Warner
- 167–168 A controversy in the analysis of (n, γ) and (p, γ) data
C van der Leun, O P van Praussen and G J L Nooren
- 169–170 The $^{36}\text{S}(n, \gamma)^{37}\text{S}$ reaction with thermal neutrons
S Raman, W Ratynski and E T Jurney
- 171–172 Nuclear structure studies of ^{41}K using the $^{40}\text{K}(n, \gamma)$ reaction
B Krusche, K P Lieb, L Ziegeler, H Daniel, T von Egidy, R Rascher, G Barreau, H G Börner and D D Warner
- 173–174 Gamma-ray directional distribution and correlation measurements in ^{60}Co
W D Hamilton, P Hungerford, H Postma, S M Scott, M Snelling, D D Warner and K E Wilcock

- 175–176 Study of low-spin states in $^{75,77}\text{Se}$ populated in slow-neutron capture
Y Tokunaga, H G Börner, H Seyfarth, G Barreau, K Schreckenbach, H Faust, R Brissot, Ch Hofmeyr, R Weinreich and O W B Schult
- 177–178 Inelastic neutron scattering from ^{89}Y
G I Crawford, J D Kellie, S J Hall, P W Martin, M N Islam and G L Cleland
- 179–180 Structure of the transitional nuclei ^{100}Mo and ^{98}Mo
G Molnár, I Diószegi, B Fazekas, Á Veres and M Sambataro
- 181–182 Spectroscopy of ^{100}Ru and ^{102}Ru by resonance neutron capture
C Coceva and P Giacobbe
- 183–184 Nuclear spectroscopy of ^{108}Ag using the (p, d) transfer reaction in comparison with neutron-capture investigations
G P A Berg, W Hürlimann, I Katayama, S A Martin, J Meissburger, J Römer, H Seyfarth and B Styczen
- 185–187 The $^{107}\text{Ag}(n, \gamma)^{108}\text{Ag}$ reaction
T Mitsunari, T D Mac Mahon, H Seyfarth, K Schreckenbach, W R Kane, I A Kondurov, P Sushkov, Y Loginov and M Bogdanovic
- 188–189 Level scheme of ^{110}Ag from the (n, γ) reaction
P A Sushkov, I A Kondurov, M Bogdanovic, T Mitsunari, T D Mac Mahon, H A Baader, D Breitig, H R Koch, H Seyfarth, O W B Schult, H G Börner, R Brissot, G Barreau, S Kerr, H Faust and K Schreckenbach
- 190–191 Investigation of intruder states in ^{114}Cd
A Mheemeed, K Schreckenbach, G Barreau, T von Egidy, J Valentin, H R Faust, H G Börner, R Brissot and M Stelts
- 192–193 The level scheme of ^{114}Cd up to 3.5 MeV from (d, p) and (n, γ) measurements
P Hungerford, H H Schmidt, T von Egidy, H J Scheerer, A Mheemeed, K Schreckenbach, G Barreau, H R Faust, H G Börner, R Brissot, S A Kerr and M Stelts
- 194–195 The $h_{11/2}$ negative-parity band structures in $^{119,121}\text{Xe}$. Comparison between experiment and IBFA calculations
J Gizon, V Barci, A Gizon, J Genevey, J Crawford and M A Cunningham
- 196–197 The low-lying excited states of ^{128}I from the (n, γ) reaction
V L Alexeev, A I Egorov, L P Kabina, Yu L Khazov, I A Kondurov, E K Leushkin, Yu E Loginov, V V Martynov, V L Rumiantsev and S L Sakharov
- 198–199 The level scheme of ^{134}Cs
M Bogdanovic, R Brissot, G Barreau, K Schreckenbach, S Kerr, I A Kondurov, Yu E Loginov, V V Martynov and P A Sushkov
- 200–201 The $^{135}\text{Ba}(n, \gamma)^{136}\text{Ba}$ reaction
K Schreckenbach, H Faust, S Blakeway, W Gelletly, W F Davidson, R F Casten, D D Warner and M F Stelts

- 202–204 Investigation of the gamma radiation from the $^{142}\text{Nd}(\text{n}, \text{n}'\gamma)$ reaction
A M Demidov, L I Govor, Yu K Cherepantsev, T J Al-Janabi and H M Yuhana
- 205–207 Investigation of the gamma radiation from the $^{148}\text{Nd}(\text{n}, \text{n}'\gamma)$ reaction
A M Demidov, L I Govor, Yu K Cherepantsev, T J Al-Janabi and H Matti
- 208–211 Investigation of the gamma radiation from the $^{150}\text{Nd}(\text{n}, \text{n}'\gamma)$ reaction
A M Demidov, L I Govor, Yu K Cherepantsev, T J Al-Janabi and K Mahmud
- 212–213 Study of low-lying states of the odd nuclei $^{151,153}\text{Eu}$ in the $(\text{n}, \text{n}'\gamma)$ reaction
V Bondarenko and P Prokofjev
- 214–215 Some rotational bands in ^{154}Eu
M K Balodis, P T Prokofjev, N D Kramer, L I Simonova, K Schreckenbach, W F Davidson, J A Pinston, D D Warner, P Hungerford, H H Schmidt, H J Scheerer, T von Egidy, P H M Van Assche and A M J Spits
- 216–217 Absolute transition probabilities in the doubly odd nucleus ^{154}Eu
H Rotter, C Heiser, L K Kostov, K D Schilling, W Andrejtscheff and M K Balodis
- 218–219 Investigation of the reactions $^{152}\text{Gd}(\text{n}, \gamma)$ ^{153}Gd and $^{153}\text{Gd}(\text{n}, \gamma)$ ^{154}Gd
A M J Spits, P H M Van Assche, H G Börner, W F Davidson and D D Warner
- 220–221 Energy levels of ^{157}Gd populated by the $(\text{n}, \text{n}'\gamma)$ reaction
V Bondarenko, P Prokofjev and G Rezvaja
- 222–223 Neutron capture by oriented dysprosium
W D Hamilton, P Hungerford, S M Scott, D D Warner and K E Wilcock
- 224–226 Identification of 0^+ bands from ARC spectroscopy in ^{164}Dy
D D Warner and R F Casten
- 227–229 The experimental level scheme of ^{168}Er
W F Davidson
- 230–231 Study of the $^{171}\text{Yb}(\text{n}, \gamma)$ ^{172}Yb reaction at isolated resonances
F Bečvář, J Honzátko, M Králík, Nguyen Dang Nhuan, T Stadnicov and S A Telezhnikov
- 232–233 Investigation of ^{177}Lu 150.392 keV isomeric state feeding
M P Stojanović, J Simić and S Koički
- 234–235 Study of ^{184}W by average resonance capture
R F Casten, D D Warner, P von Brentano and K Schiffer
- 236–237 Curved-crystal study of de-excitation gamma rays in ^{184}W following neutron capture
W F Davidson, C W Reich, R C Greenwood and H R Koch
- 238–239 The nuclear structure of ^{195}Pt
D D Warner, H G Börner, G Barreau, R F Casten and M L Stelts

- 240–242 Strengths of E0 transitions in ^{188}Os and ^{196}Pt and the structure of IBA wave functions in the Os–Pt transition region
W R Kane, R F Casten, D D Warner, K Schreckenbach, H Faust and S Blakeway
- 243–244 Spectrometry of gamma transitions feeding the 312 keV isomeric state in ^{198}Au from the $^{197}\text{Au}(\text{n}, \gamma)^{198}\text{Au}$ reaction
J Simić, S Kočki and M P Stojanović
- 245–246 The decay $^{185m}\text{Hg} \rightarrow ^{185g}\text{Hg}$
C Bourgeois, P Kilcher, M G Porquet, B Roussièr, J Sauvage-Letessier and the ISOCELE collaboration
- 247–249 Spin assignment of the lowest octupole bandhead in ^{236}U
H R Faust
- 250–262 Neutron-capture gamma-ray spectroscopic measurements in the actinide region
R W Hoff, R W Lougheed, G Barreau, H Börner, W F Davidson, K Schreckenbach, D D Warner, T von Egidy and D H White
- 263–265 Excited levels of ^{238}Np from spectroscopic measurements of the reaction $^{237}\text{Np}(\text{n}, \gamma)^{238}\text{Np}$ and ^{242m}Am alpha decay
R Hoff, W Ruhter, L Mann, J Landrum, R Dupzyk, S Drissi, J Kern, W Strassman, H Börner, G Barreau and K Schreckenbach

Chapter 2: Neutron resonances, the neutron-capture mechanism and strength functions

Section 2.1: Theory

- 267–292 Current perspectives on statistical models of nuclear reactions
J E Lynn
- 293–297 Distribution of radiative strength and relations with collective excitations
B Castel
- 298–312 Neutron resonances and other highly excited states in the quasiparticle–phonon nuclear model
V G Soloviev
- 313–315 Partial radiative E1 and M1 strength functions in ^{55}Fe and ^{59}Ni
V G Soloviev and Ch Stoyanov
- 316–318 Statistical compared with valence-neutron capture in ^{98}Mo
D G Gardner
- 319–321 Continued study of the parameterization of the E1 gamma-ray strength function
M A Gardner and D G Gardner

- 322–335 Non-statistical effects and the doorway state
G Rohr
- 336–338 Mean total radiative widths of neutron resonances and E1 transitions between nuclear compound states
V I Bondarenko and M G Urin
- 339–341 On effective charge in the frame of the optical-model description of partial E1 radiative strength functions
V G Guba and M G Urin
- 342–355 The principles of resonance-averaged gamma-ray spectroscopy
R E Chrien
- Section 2.2: Neutron resonances and the capture mechanism*
- 357–374 Selected topics in thermal- and resonance-neutron capture
S Raman
- 375–376 Direct capture in the $^{34}\text{S}(\text{n}, \gamma)^{35}\text{S}$ reaction with thermal neutrons
R F Carlton, S Raman and E T Jurney
- 377–378 The use of oxide targets in 2 keV average neutron-capture measurements
J S Tang and S Raman
- 379–380 Parity of the 398 eV resonance in ^{35}Cl
A Z Hussein, S Raman and J A Harvey
- 381–382 Thermal-neutron absorption cross section of sulfur and the $^{252}\text{Cf} \nu$ problem
E T Jurney, S Raman and R R Spencer
- 383–392 Thermal-neutron-capture cross section measurements
M A Lone
- 393–394 Consequences of intermediate coupling for interference in resonance neutron capture
B J Allen
- 395–397 The role of valence-neutron capture in the magic neutron nuclides
B J Allen
- 398–400 Fast-neutron-capture γ -ray spectra in ^{88}Sr
B J Allen and F Z Company
- 401–403 Average neutron-capture γ -ray spectra in ^{139}La and ^{141}Pr
B J Allen and F Z Company
- 404–405 Search for valence effects in p-wave capture in ^{88}Sr
B J Allen, R Shelley, T van der Veen, A Brusegan and G Vanpraet
- 406–407 Failure of valence-neutron capture in ^{96}Zr
A Brusegan, F Corvi, G Rohr and B J Allen
- 408–410 Resonance interference in ^{54}Fe s-wave capture
A Brusegan, F Corvi, G Rohr, R Shelley, T van der Veen and B J Allen

- 411–412 Neutron resonance study of ^{86}Kr
B Fogelberg, J A Harvey, R L Macklin, S Raman and P H Stelson
- 413–414 Contributions of statistical, valence and direct mechanisms to the $^{40}\text{Ca}(\text{n}, \gamma)$ reaction below 2 MeV
G Longo, G Reffo, F Fabbri and A Mengoni
- 415–416 Parity assignment of the pronounced structure in radiative capture of neutrons by ^{238}U below 100 keV
M S Moore, F Corvi, L Mewissen and F Poortmans
- 417–418 Mechanism of neutron capture in $^{47,48,49}\text{Ti}$
J F A G Ruyl
- 419–420 The direct capture mechanism of thermal neutrons by aluminium
Shi Zong-Ren, Zeng Xian-tang and Guo Tai-chang

Section 2.3: The gamma strength function

- 421–422 Photon strength functions for ^{90}Y , ^{94}Nb , ^{160}Tb and ^{182}Ta
S Joly
- 423–425 Mass dependence of the giant resonance model
J Kopecky
- 426–427 Radiative E2 strength in neutron capture
J Kopecky
- 428–430 On the dipole nature of statistical gamma-ray spectra following neutron capture
H Postma
- 431–432 On the multipolarity of soft γ transitions between compound states
Vo Kim Thanh, V A Vtyurin and Yu P Popov
- 433–434 Test of Axel–Brink predictions in the $^{167}\text{Er}(\text{n}, \gamma)^{168}\text{Er}$ reaction
S Kahane, G G Slaughter and S Raman
- 435–436 Anomalous transitions in ^{144}Nd and ^{146}Nd in ‘2 keV’ (n, γ) measurements
S Raman, O Shahal, D A McClure and M J Kenny
- 437–438 Grouping of average intensities of γ rays from neutron capture in resonances of ^{121}Sb
F N Belyaev, V P Bolotsky, S P Borovlev and M V Polozov

Section 2.4: The (n, α) reaction

- 439–450 The (n, α) and ($\text{n}, \gamma\alpha$) reactions on resonance neutrons
Yu P Popov
- 451–452 Influence of final-state structure on α -particle transition rates in the compound nucleus
J Andrzejewski, F Bečvář, Vo Kim Thanh, V A Vtyurin and Yu P Popov

- 453–454 On the constancy of average α widths of ^{144}Nd and ^{148}Sm compound nuclei excited by neutrons with energies up to 30 keV
J Andrzejewski, Vo Kim Thanh, V A Vtyurin, Yu P Popov, V I Salatskij and G Khuukhenkhuu
- 455–456 An indication of the interference effect in the alpha-particle channel
M Asghar and A Emsallem
- 457–459 The (n_{th}, α) reaction in the actinide region
P D'Hondt, C Wagemans, E Allaert, A De Clercq, G Barreau and A Emsallem
- 460–461 The (n_{th}, α) reaction on deformed nuclei
A Emsallem, M Asghar, C Wagemans and P D'Hondt
- 462–464 Study of (n, α) and (n, p) reactions with resonance neutrons
C Wagemans and H Weigmann

Chapter 3: Reactions with fast neutrons

- 465–476 Fast-neutron radiative capture
L Nilsson
- 477–491 The role of simple direct models in fast-nucleon radiative capture
M Potokar
- 492–493 Neutron capture in ^{28}Si and ^{32}S in the energy region 2.7–14.0 MeV
A Lindholm, L Nilsson, I Bergqvist and N Olsson
- 494–504 Fast polarized neutron capture in the giant resonance region
H R Weller
- 505–506 An approach for a consistent description of γ -ray spectra from $(n, x\gamma)$ reactions induced by fast neutrons
B Basarragtscha, D Hermsdorf and D Seeliger
- 507 Non-equilibrium emission of light charged particles and neutrons in heavy-ion reactions at 7–10 MeV/nucleon
C Borcea, E Gierlik, R Kalpakchieva, Yu Ts Oganessian, T Pawlat, Yu E Penionzhkevich, K D Schilling, M V Blinov, S S Kovalenko and E M Kozulin
- 508–509 The E2 isovector giant resonance as seen through the capture of fast neutrons
D M Drake, K Aniol, I Halpern, D Storm, S Joly, S Wender and L Nilsson
- 510–511 $(n, \text{charged particle})$ reactions on 1p-shell nuclides at 14 MeV
R C Haight
- 512–513 The radiative capture of 14.2 MeV neutrons by ^{56}Fe and ^{238}U and the pre-equilibrium model of fast-neutron capture
Huang Zheng-de, Cao Zhong, Wang Hui-zhu, Liu Ji-shi, Ding Da-zhao, Ma Zhong-yu, Sun Zi-yang, Zhang Jing-shang and Zhen Yi-shong
- 514–515 Study of the ^{208}Pb (n, γ_0) reaction between 0.8 and 5.9 MeV
S Joly, G Grenier, D M Drake and R Rigaud

- 516–517 Neutron-capture cross sections for scandium, zirconium, terbium and rhenium between 0.5 and 2.5 MeV
J Voignier, S Joly and G Grenier
- 518–519 Fast-neutron radiative capture cross sections and d-wave strength functions
V N Kononov, E D Poletaev, B D Yurlov, M V Bokhovko, L E Kazakov and V M Timokhov
- 520–523 Simple single doorway-state model and consistent analysis of the fast-neutron radiative capture reaction
M Potokar
- 524–525 Direct–semidirect model analysis of $^{40}\text{Ca}(\vec{n}, \gamma_0)$
M Potokar
- 526–528 Mass dependence of the strength of the imaginary dipole form factor in fast-neutron capture
R Martinčić, A Likar, F Cvelbar and M Mikuz
- 529–530 The $^{40}\text{Ca}(n, ^3\text{He})^{38}\text{Ar}$ reaction at $E_n = 14.6$ MeV
D Miljanic, M Zadro and D Rendic
- 531–532 The $^2n^*$ contributions in neutron spectra from $(n, 2n)$ reactions
M Zadro and D Miljanic
- 533–534 Polarization effects induced by isoscalar quadrupole resonance in the $^{40}\text{Ca}(\vec{n}, \gamma_0)$ reaction
F Saporetti and R Guidotti

Chapter 4: Related topics

Section 4.1: Precise masses and gamma energies

- 535–547 Determination and use of nuclear masses
A H Wapstra
- 548–550 Consistency of gamma-ray energy standards
C van der Leun, P de Wit and C Alderliesten

Section 4.2: Stellar nucleosynthesis

- 551–557 Stellar nucleosynthesis and (n, γ) reactions
J Audouze
- 558–572 Population of isomeric states by keV neutron capture: clues to stellar s-process nucleosynthesis
H Beer and F Käppeler
- 573–574 Isomeric branching ratio of $^{175}\text{Lu}(n, \gamma)$ and s-process nucleosynthesis
B J Allen, G C Lowenthal, J W Boldeman and J R de Laeter

Section 4.3: Gamma-induced reactions

- 575–589 Experiments with monoenergetic high-energy gamma rays
R Moreh
- 590–591 Resonances in $^{207,208}\text{Pb}$ excited by neutron-capture gamma rays
Y Birenbaum, Z Berant, A Wolf and R Moreh
- 592–593 Study of E1–E2 interference in the (γ, n) reaction on ^{208}Pb and ^{209}Bi
Y Birenbaum, Z Berant, S Kahane, R Moreh and A Wolf
- 594–595 Study of molecular orientation using nuclear techniques
R Moreh and O Shahal
- 596–597 Evidence for inelastic Raman scattering of 8.9–11.4 MeV photons from ^{197}Au
R Bar-Noy, Z Berant and R Moreh
- 598–612 Recent developments in elastic photon scattering in the energy range between 0.1 and 10 MeV
M Schumacher, F Smend, P Rullhusen, W Mückenheim and H G Börner
- 613–625 Photofission of the actinide nuclei
E W Lees
- 626–627 Ground-state photoneutron angular distributions for ^{15}N
W F Davidson, N K Sherman, J D Watson, P Kuo, B Roth, J W Jury and K G McNeill
- 628–629 The polarization of photoneutrons from ^{16}O and ^2H
J L Robertson, S J Hall, J D Kellie and G I Crawford
- 630–632 Photon absorption cross sections of Al, Si and ^{208}Pb
N K Sherman and W F Davidson

Section 4.4: Neutrons

- 633–634 An experimental limit on the electric dipole moment of the neutron
I S Altarev, Yu B Borisov, N V Borovikova, A B Brandin, V F Ezhev, S N Ivanov, V M Lobashev, V A Nazarenko, V L Ryabov, A P Serebrov, R R Taldaev and E B Shulgina
- 635–637 Experiments with cold and ultracold neutrons at the ILL, Grenoble
W Mampe
- 638–639 An intense beam of thermal neutrons obtained by transmission through a system of focussing mirrors
F Stecher-Rasmussen

Section 4.5: Applications

- 641–654 Practical applications of neutron-capture reactions and prompt gamma rays
M D Glascock

- 655–668 Neutron-capture prompt gamma-ray spectrometry as a quantitative analytical method
D L Anderson, W H Zoller, G E Gordon, W B Walters and R M Lindstrom
- 669–678 Atomic physics information from (n, γ) experiments
K Schreckenbach
- 679–681 Use of monoenergetic neutrons in medicine and biology
N Ryde and B Bergman
- 682–683 On-line neutron-capture gamma analysis of ore concentrates
S Uusitalo, E Mäkinen and D O Riska
- 684–685 On measuring neutron radiative capture rates of indicators forming a single probe in water
N H S Haidar

Section 4.6: Fundamental physics

- 687–689 Search for the two-photon decay of a new light penetrating particle – axion?
– at a nuclear reactor
W R Ermer, H Faissner, E Frenzel, E Hermans, H R Koch, O Schult, H Seyfarth and R Yogeshwar

Chapter 5: Summary and history

- 691–703 (n, γ) research in the thirties
R Fleischmann
- 704–715 Symposium summary
O W B Schult

717–722 **Appendix:** List of participants

723–726 **Author Index**

727–728 **Index of Reactions**
