## TABLE OF CONTENTS (Vol. 1)

apter		
1. 2.	Introduction Two Nucleon Systems	1 4
	<pre>2(A) The Deuteron 2(B) Scattering States at Low Energies</pre>	5 9
3.	Parametrizations of NN Interactions	16
	<ul> <li>3(A) Operators in Phenomenological Potentials</li> <li>3(B) Partial-Wave Expansions</li> <li>3(C) Single-, Double-, and Triple-Scattering Experiments</li> <li>3(D) Scattering-Matrix Formalism</li> <li>3(E) Density-Matrix Formalism</li> <li>3(F) Relations Among Formalisms</li> </ul>	16 19 24 25 27 30
4.	Experimental Results on NN Scattering	33
	<pre>4(A) Review of Experimental Results</pre>	33 40
5.	Meson Exchanges and Phenomenological Potentials	47
	<ul> <li>5(A) Yukawa's Meson-Exchange Theory of Nuclear Forces</li> <li>5(B) The TNS Program and the Two-Pion-Exchange Potential</li> <li>5(C) Pair Suppression</li></ul>	47 52 54 56 58
6.	One-Boson-Exchange Potential	61
	<ul> <li>6(A) One-Vector Exchange Potential</li></ul>	61 63 65 66 70
7.	Two-Pion Exchanges and Modern Potentials	76
	<ul> <li>7(A) Dispersion Relation and Mandelstam Representation</li> <li>7(B) Spectral Functions for TPE</li> <li>7(C) Main Features of the TPE Potential</li></ul>	77 79 81 84 86
8.	Quark Model of Nuclear Forces	91
	<ul> <li>8(A) The Quark Model of Hadrons</li> <li>8(B) Color and Quantum Chromodynamics</li> <li>8(C) Phenomenological Quark Models: Potential Models</li> <li>8(D) The MIT Bag Model</li></ul>	92 96 100 103 109

Chapter I: Nucleon-Nucleon Interactions (C.W. WONG and K.F. LIU)

9.	Nucle	ar Effecitve Interactions	118
	9(A)	Effective Interactions for Valence Nucleons Outside the Closed Shell	118
	9(B) 9(C)	Effective Interactions for the Ground State Properties of Nuclei Effective Interactions for the Particle-Hole Configurations	126 132
10.	Fermi	Liquid Theory of Nuclear Matter	133
	10(A) 10(B)	Landau's Theory of Fermi Liquid Connection to Brueckner-Bethe Theory	133 134
	10(C) 10(D)	A Theory of Interacting Quasiparticles and Collective Excitations Landau Parameters and Sum Rules	138 140
11.	Fermi	Liquid Theory of Finite Nuclei	147
	11 (A) 11 (B) 11 (C) 11 (D)	Linear Response Theory and RPA in Coordinate Space Energy Weighted Sum Rules and Collective Models Single Particle Renormalization and Optical Potential Particle-Particle Effective Interaction	147 151 155 160
	Ackno	wledgement	165
	Refer	ences	166
Chapter	II: Nu	clear Shell Model and Statistical Spectroscopy (S.S.M. WONG)	
1.	Basic	Shell Model Techniques	175
1.	Basic a. b. c. d.	Basis States and Shell Model Space Evaluation of Many-Particle Shell Model Matrix Elements Matrix Diagonalisation and Different Shell Model Techniques Discussion	175 175 178 186 190
1. 2.	Basic a. b. c. d. Distr	Basis States and Shell Model Space Evaluation of Many-Particle Shell Model Matrix Elements Matrix Diagonalisation and Different Shell Model Techniques Discussion	175 175 178 186 190 193
1.	Basic a. b. c. d. Distr a. b. c.	E Shell Model Techniques Basis States and Shell Model Space Evaluation of Many-Particle Shell Model Matrix Elements Matrix Diagonalisation and Different Shell Model Techniques Discussion Tibution of Shell Model Eigenvalue and Excitation Strengths Random Matrix Study of the Eigenvalue Distribution Distribution of Excitation Strengths	175 178 186 190 193 193 200 203
1. 2. 3.	Basic a. b. c. d. Distr a. b. c. Stati	Basis States and Shell Model Space Evaluation of Many-Particle Shell Model Matrix Elements Matrix Diagonalisation and Different Shell Model Techniques Discussion Tibution of Shell Model Eigenvalue and Excitation Strengths Random Matrix Study of the Eigenvalue Distribution Distribution of Excitation Strengths	175 178 186 190 193 193 200 203 206
1. 2. 3.	Basic a. b. c. d. Distr a. b. c. Stati a. b. c. d. e. f.	E Shell Model Techniques Basis States and Shell Model Space Evaluation of Many-Particle Shell Model Matrix Elements Matrix Diagonalisation and Different Shell Model Techniques Discussion Tibution of Shell Model Eigenvalue and Excitation Strengths Random Matrix Study of the Eigenvalue Distribution Fluctuation Distribution of Excitation Strengths Stical Spectroscopy Distribution of Eigenvalues and Spectroscopic Strengths Scalar Trace Configuration Trace Scalar-T and Configuration-T Averages Diagrammatic Method of Evaluating Scalar and Configuration Traces	175 178 186 190 193 200 203 206 206 208 213 213 214 215 220

۷

Chapter	III: Topics in Many Body Theory of Nuclear Effective Interactions (T.T.	.S. KUO)
1.	Introduction Energy Dependent Theory	248 259
	2.1 Self-Consistent Solution of the Secular Equation	260
6	2.2 Perturbation Expansion of $V_{eff}(\omega)$	262
	2.3 Radius of Convergence of $V_{eff}(\omega)$	265
3.	Energy Independent Theory and Intruder States	268
	3.1 The $\hat{Q}$ -Box Approach	271
	3.2 The Intruder State Problem	273
	3.3 A Partial Summation Method	279
	3.4 Hartree-Fock Unperturbed Hamiltonian	283
4.	The Iterative Method of Lee and Suzuki	290
	4.1 Degenerate PH P	293
	4.2 Non-Degenerate PH P	294
	4.3 Convergence Properties of Iterative Methods	297
_		
5.	Feynman-Goldstone Diagrams for Many Body Problems	300
	5.1 Goldstone Linked Diagram Expansion	304
	5.2 Diagram Rules for $\Delta E$	314
	5.3 Hugenholtz Diagrams	322
6	Generalized Folded Diagram Theory of Kup and Kronoislave	221
0.	Generalized Folded Diagram Theory of Kdo and Krencigiowa	331
	6.1 Folded Diagram Factorization	339
r.	6.2 Valence-Linked Expansion of V eff	342
7.	Summary and Discussions	344
	Appendix 1 Non-Crossing Theorem	348
l	References	350
Chapter	IV: Electromagnetic and Weak Interactions in the Nucleus (H.C. LEE and	W.K. CHENG)
1.	Introduction	354
2.	Preliminaries	355
	2.1 Scale. Unit and Dimension	355
	2.2 Invariance. Symmetry and Conservation Law	358
	2.3 Current and Field	362
	2.4 Decay Width and Scattering Cross Section	364
3.	Electromagnetic Interactions in the Nucleus	372
	3.1 Introduction	270
	3.2 Radiation Fields of the Photon	372
	3.3 Charge and Current Densities	373
	3.4 Two Simple Examples: $p+p \rightarrow d+\gamma$ and $\gamma+d \rightarrow p+p$	380
	3.5 Multipole Expansion and Selection Rules	387
	3.6 Width and Strength of Photon Transitions	394
	3.7 Static Electromagnetic Moments	403
	3.8 The Giant Resonance and Sum Rules	408
	3.9 Electron Scattering: Formalism	413
	3.10 Electron Scattering: Selected Topics	424
	3.11 Rotation, Vibration and Core-Polarization	435

4.	Weak	Interactions in the Nucleus	458
	4.1 4.2 4.3 4.4	Introduction Effective Weak Interaction Hamiltonian and Its Symmetry Properties Weak Interactions of the Nucleon Weak Interactions in the Nucleus	458 462 487 502
5.	Unif	ication of Electromagentic and Weak Interactions	523
	5.1 5.2 5.3 5.4	Background - Yang-Mills Fields The SU(2) x U(1) Model Inelastic Neutrino-Nucleus Scattering Neutrino Disintegration of the Deuteron and Neutrino	523 529 537
		Oscillation	545
6.	Meso	n Exchange Currents in the Nucleus	552
	6.1 6.2 6.3 6.4 6.5 6.6 6.7	Introduction Symmetry Properties of $A^{(2)}$ Derivation of $A^{(2)}$ The $A^{(2)}$ Operators Applications Vector Meson-Exchange Currents Parity Nonconservation in the Nucleus	552 553 555 559 562 564 565
