

TABLE OF CONTENTS (Vol. 2)

Chapter V: Microscopic Description of the Nuclear Cluster Theory (Y.C. TANG)

1. Introduction	572
2. Cluster Representation of Nuclear States	576
2.1 Oscillator Cluster Representation	576
2.2 Lowest 4^+ α -Cluster State of ^{8}Be	580
2.3 Qualitative Discussion of α -Cluster States in ^{16}O	585
2.4 Generalized Cluster Wave Functions	587
3. Formulation of the Microscopic Cluster Theory	589
4. The Resonating-Group Method	591
4.1 Basis Wave Functions in the RGM	591
4.2 Derivation of Coupled Equations	594
4.3 Complex-Generator-Coordinate Technique	606
4.4 Redundant Solutions	615
5. The Generator-Coordinate Method	619
5.1 Basis Wave Functions in the GCM	619
5.2 Hill-Wheeler Equation and Equivalence Between RGM and GCM	622
5.3 General Case of Unequal Width Parameters	626
5.4 Procedures for Solving the Equation of Motion	631
6. Examples of MCT Calculations	633
6.1 Bound-State Calculation	634
6.2 Scattering Calculations	635
6.3 Reaction Calculations	642
6.4 Summary	643
7. Antisymmetrization Effects in Nuclear Systems	644
7.1 Effects of Antisymmetrization on the Effective Internuclear Potential	645
7.2 Effects of Antisymmetrization in Nuclear Direct Reactions	657
7.3 Concluding Remarks	659
8. Electromagnetic Calculations with MCT Wave Functions	660
8.1 Electromagnetic Properties of the Seven-Nucleon System	660
8.2 Electron Scattering Elastic and Inelastic Form Factors of ^{12}C and ^{20}Ne	665
8.3 Concluding Remarks	667
9. Conclusion and Outlook	667
Acknowledgements	669
Appendix A: The Orthogonality Condition Model	669
A.1 Description of the Model	669
A.2 Effective Potentials in the OCM	679
A.3 Comparison with RGM and Experimental Results	683
References	686

Chapter VI: Heavy Ion Direct Reactions (Q.K.K. LIU)

1. One-Nucleon Transfer Reaction	694
1.1 Elastic Scattering	694
1.2 Qualitative Features of One-Nucleon Transfer Reactions	699
1.3 Exact DWBA Heavy-Ion Transfer Reaction	717
1.4 Approximate DWBA for Heavy-Ion Transfer Reaction	728
2. Inelastic Scattering	736
2.1 The Coupled Equations	736
2.2 Numerical Solution of the Coupled Equations	738
2.3 Distorted Wave Born Approximation	741
2.4 The Macroscopic Interaction	744
2.5 The Nuclear-Coulomb Interference	747
3. Spin-Dependent Interaction	751
3.1 Symmetry and Spin-Flip	751
3.2 Rotation of the Quantization Axis	752
3.3 The Systematics of P_1	754
4. Conclusion	759
Appendix - Elements of Collision Theory	761
A.1 The Schrödinger Equation	761
A.2 The Cross Section	762
A.3 Partial Wave Expansion of the Plane Wave	764
A.4 Partial Wave Expansion of the Scattering Wave Function	765
A.5 Determination of the Scattering Amplitude $f(\theta)$	766
A.6 The Lippmann-Schwinger Equation (given without proof)	769
A.7 Coordinate Representation of the Green's Function	770
A.8 The Lippmann-Schwinger Equation in Coordinate Representation	773
A.9 The Born Expansion	774
A.10 Partial Wave Expansion of the Green's Function	775
A.11 Coulomb Scattering	777
A.12 Rearrangement Collision	779
A.13 The Transition (T) Matrix	783
A.14 The Post- and Prior-Form of the T-Matrix	784
A.15 Scattering from a Complex Potential	786
A.16 The Two-Potentials Formula	787
References	793

Chapter VII: Heavy Ion Collisions (C.M. KO)

I. Introduction	798
I.1 Motivations for Studying Heavy Ion Collisions	800
I.2 Classifications of Heavy Ion Collisions	800
I.3 Experimental Observations and Theoretical Interpretations	801
II. Time-Dependent Hartree-Fock Theory	816
II.1 Derivation of the TDHF Equation	816
II.2 Solution of TDHF Equation and Results	818

III. Statistical Transport Theory	823
III.1 Introduction	823
III.2 The Random Matrix Model	824
III.3 Derivation of the Transport Equation	826
III.4 Solution of the Transport Equation in One-Dimension	830
III.5 Calculation of Cross Sections	833
IV. High Energy Theory	841
IV.1 Introduction	841
IV.2 The Classical Transport Equation	842
IV.3 The Rows on Rows Model	847
IV.4 The Statistical Model	852
References	854

Chapter VIII: Interacting Boson Model (A. ARIMA)

1. Introduction	858
2. SD Subspace	859
3. Interacting Boson Model	861
4. Discussions	865
References	867

Chapter IX: The Oscillating Behaviour of Backbending (A. FAESSLER)

1. Introduction	869
2. Core-Cluster Coupling Model for Backbending	873
3. Alignment of $h_{11/2}$ Proton Pair	883
4. Summary	887
References	888

Chapter X: Excitation and Decay of the New Giant Multipole Resonances (C.C. CHAN)

I. Introduction	889
II. A Brief Theoretical Framework	891
II.1 The Collective Model Description of Giant Resonances	891
II.2 The Microscopic Model Description of Giant Resonances	891
II.3 The Sum Rule Limits	893
III. Experimental Investigations - Singles Experiments	896
III.1 Inelastic Electron Scattering	896
III.2 Inelastic Light Ion Scattering	900
III.3 Inelastic Heavy Ion Scattering	902
III.4 Inelastic Pion Scattering	904
III.5 Charge Exchange Reactions	905
IV. Systematics of the Giant Multipole Resonances	908
IV.1 Isoscalar Giant Monopole Resonance	908
IV.2 Isoscalar Giant Quadrupole Resonance	912
IV.3 Isoscalar Giant Octupole Resonance	917
IV.4 Other Isoscalar Higher Multipole Resonances	919
IV.5 Isovector Giant Quadrupole Resonance	919
IV.6 Giant Gamow-Teller Resonance	921

V.	Experimental Investigations of the Decay Modes of Giant Resonances ...	923
V.1	Radiative Capture Reactions	923
V.2	Electroproduction Experiments	928
V.3	Hadron Induced Particle-Particle Coincidence Experiments	931
V.4	(e,e'x) Coincidence Experiments	936
VI.	Systematics of the Decay Properties	938
VI.1	Light Nuclei	938
VI.2	Medium Mass Nuclei	940
VI.3	Heavy Mass Nuclei	944
VI.4	Statistical vs. Direct Decay of the Giant Quadrupole Resonance ..	945
VII.	Spreading and Escaping Widths	948
VIII.	Future Research	952
	References	953

Chapter XI: Some Applications of Small Accelerators (N. CUE)

1.	Introduction and Scope	957
2.	Compositional Studies of Layered Materials	961
2.1	Rutherford Backscattering Spectrometry (RBS)	961
2.2	Nuclear Reactions Analysis	971
2.3	Particle Induced X-ray Emission	977
2.4	Summary	981
	References	983
3.	Channeling of Heavy Charged Particles	986
3.1	The Continuum Model	989
3.2	Atom Location and Defect Studies	997
3.3	Blocking Lifetime Studies	1006
	References	1010
4.	Characteristic Radiation of Channeled Relativistic Electrons	1012
4.1	General Features	1013
4.2	Axial Case	1016
4.3	Planar Case	1021
4.4	Prospects for Applications	1024
	References	1025

Chapter XII: Nuclei Far from Stability (J.K.P. LEE)

1.	Introduction	1026
2.	Production Methods	1027
2.1	General Features	1027
2.2	Nuclear Fission	1027
2.3	Proton Induced Reactions	1029
2.4	Heavy Ion Induced Reactions	1031

3. Experimental Methods	1035
3.1 Introduction	1035
3.2 Direct In-Beam Measurements	1035
3.3 Pulsed Beam Technique	1035
3.4 Rabbit System	1036
3.5 Gas-Jet Recoil Transport Systems	1036
3.6 Rapid Chemical Separation	1037
3.7 Electromagnetic Separation of Fast Reaction Products	1039
3.8 On-Line Isotope Separator (ISOL)	1044
4. Nuclear Mass	1049
4.1 Introduction	1049
4.2 Mass Formulae	1050
4.3 Garvey-Kelson Mass Relations	1050
4.4 Mass Measurements	1055
5. Delayed Particle Emitter	1065
5.1 Introduction	1065
5.2 Delayed Particle Spectroscopy N<Z	1067
5.3 Delayed Particle Spectroscopy N>Z	1072
5.4 Other Delayed Emission Precursors	1079
5.5 Proton Radioactivity	1080
References	1081
