

Contents

v Preface

Section 1: Keynote

- 1–20 The foundations of the physics of atomic collisions in Australia
R W Crompton

Section 2: Plenary

- 21–34 The Coulomb three-body problem
A T Stelbovics
- 35–48 Recent experimental work on two-electron correlations
F H Read
- 49–68 Recent trends in ion atom collisions
C L Cocke
- 69–88 Atomic and molecular physics with synchrotron radiation
B Crasemann

Section 3: Review

- 89–104 Interaction of multi charged ions at low velocities with surfaces and solids
H J Andrä, A Simionovici, T Lamy, A Brenac, G Lamboley, A Pesnelle, S Andriamananjara, A Fleury, M Bonnefoy, M Chassevent and J J Bonnet
- 105–126 Collision processes in charge exchange recombination spectroscopy of plasmas
A N Zinoviev
- 127–138 Electron attachment to molecules at ultralow electron energies
A Chutjian
- 139–152 Atom cooling and trapping, and collisions of trapped atoms
A Gallagher
- 153–168 Circular and linear dichroism in atomic and molecular photoelectron emission
N A Cherepkov
- 169–180 Half-collisions in intense laser fields
H Helm

Section 4: Electron–Atom

- 181–190 Intermediate energy R-matrix theory
T T Scholz
- 191–198 Electron–atom scattering calculations using the coupled-channel optical method
I Bray
- 199–208 Collisions of polarized electrons with atoms and molecules
G F Hanne

Section 5: Electron-Impact Ionization

- 209–218 Double ionization of atoms by electron impact e,(3–1)e and (e,3e) techniques
A Lahmam-Bennani and A Duguet
- 219–229 (e, 2e) on inner and outer shells at intermediate energies
L Avaldi, R Camilloni, E Fainelli and G Stefani
- 231–242 New applications of (e, 2e) techniques
E Weigold

Section 6: Electron–Molecule

- 243–252 Resonant electron scattering from adsorbed molecules
J P Gauyacq, V Djamo and D Teillet-Billy
- 253–262 Low energy electron–molecule collision cross sections
S J Buckman, M J Brunger, M J Brennan, D J Alle, R J Gulley and S J Newman
- 263–272 R-matrix calculations of electron scattering from neutral and ionized molecules
C J Gillan
- 273–282 Optical potentials for electron molecule collisions
H-D Meyer
- 283–292 *Ab Initio* calculations on collisions of low energy electrons with polyatomic molecules
T N Rescigno
- 293–302 Electron scattering from polyatomic molecules using exact exchange plus parameter-free polarisation potential
A Jain

Section 7: Electron–Ion

- 303–312 Electron-impact excitation of ions
D C Griffin, M S Pindzola and N R Badnell
- 313–322 Electron–ion interaction cross sections determined by x-ray spectroscopy on EBIT
P Beiersdorfer, R Cauble, S Chantrenne, M Chen, D Knapp, R Marrs, T Phillips, K Reed, M Schneider, J Scofield, K Wong, D Vogel, R Zasadzinski, B Wargelin, M Bitter and S von Goeler
- 323–326 Electron impact double ionization of ions
P Defrance and Yu De Jiang

Section 8: Collisions in Fields

- 327–336 Electron–atom collisions in strong laser fields
A Maquet
- 337–340 Collisional excitation transfer in a magnetic field
T Fujimoto
- 341–350 Collisional and radiative processes in a quantizing magnetic field
M Zarcone

Section 9: Ion–Atom

- 351–360 Recoil ion momentum spectroscopy in fast ion atom collisions
R Dörner, J Ullrich, O Jagutzki, S Lencinas, A Genschmantel and H Schmidt-Böcking
- 361–370 Inner shell alignment in ion–atom collisions
J Pálinkás
- 371–380 Ultrarelativistic atomic collisions
C Bottcher and M R Strayer
- 381–390 Electron capture in very low energy collisions of multicharged ions with H and D in merged beams
C C Havener, F W Meyer and R A Phaneuf
- 391–400 Slow collisions between ions of very high charge and neutral atoms
H Cederquist, H Andersson, E Beebe, C Biedermann, L Broström, Å Engström, H Gao, R Hutton, J C Levin, L Liljeby, M Pajek, T Quinteros, N Selberg and P Sigray
- 401–411 State-selective electron capture in collisions between ions and alkali–metal atoms
J Pascale
- 413–422 Theory of ionization in ion–atom collisions
D S F Crothers

- 423–434 Theory of ion–atom excitation
J E Miraglia and V D Rodríguez
- 435–450 Two-electron transitions in non-resonant charge transfer and related processes
V N Ostrovsky

Section 10: Ion–Molecule

- 451–458 The dissociative ionization of simple molecules by ion impact
C J Latimer
- 459–464 Spectroscopic and dynamical studies of chemiluminescent ion–molecule reactions
T Glenewinkel-Meyer, A Kowalski, B Müller, C Ottinger, D Rabenda, P Rosmus and H-J Werner
- 465–474 Site-specific electronic excitation in ion–molecule collisions
S Kita, H Tanuma and N Shimakura

Section 11: Ion–Surface Interactions

- 475–486 Slow ion–surface interactions studied by means of ion-induced electron emission statistics
H P Winter
- 487–496 Neutralization of ions at metal surfaces
I Urazgil'din, P Eeken and A Niehaus

Section 12: Photoionization

- 497–506 Multiphoton processes in atomic hydrogen
R M Potvliege and R Shakeshaft
- 507–516 Direct and indirect processes in single photon double ionization
P Lablanquie

Section 13: Photoionization and Detachment

- 517–526 Photodissociation of hydrogen: a subtle probe of collision physics
W J van der Zande, L D A Siebbeles, J M Schins and J Los

Section 14: Low-Energy Neutral Collisions

- 527–536 Experimental determination of accurate van der Waals interaction potentials
L Beneventi, P Casavecchia and G G Volpi
- 537–547 The role of initial orbital alignment and orientation in charge transfer processes induced in atomic collisions
D Dowek, J C Houver and C Richter

Section 15: Reactive Collisions

- 549–558 Application of the hyperspherical method to the calculation of reactive cross sections
J M Launay and M Le Dourneuf
- 559–578 Photoinitiated reactions in weakly bound complexes: $\text{Ca}^* + \text{HX} \rightarrow \text{CaX}^* + \text{H}$
B Soep, J C Whitham, J P Visticot and A Keller
- 579–588 Reactive scattering from aligned and oriented molecules
H J Loesch, A Remscheid, E Stenzel, F Stienkemeier and B Wüstenbecker

Section 16: Clusters

- 589–598 Transition from molecular structure to collective excitations in alkali metal clusters
J Chevaleyre
- 599–608 Attachment of slow electrons to molecular clusters
T Kraft, M-W Ruf and H Hotop
- 609–622 Optical and electronic properties of small metal clusters
K H Meiwes-Broer

Section 17: Exotic Systems

- 623–630 Annihilation of positrons on large molecules
T J Murphy and C M Surko
- 631–640 Ionization of atoms by particle and antiparticle impact
H Knudsen

Section 18: Hot Topics

- 641–646 High resolution studies of laser stimulated radiative recombination
F B Yousif, P Van der Donk, Z Kucherovsky, J Reis, E Brannen, J B A Mitchell and T J Morgan
- 647–654 Laser-induced recombination in merged electron and proton beams
U Schramm, J Berger, M Grieser, D Habs, G Kilgus, T Schüßler, D Schwalm, A Wolf, R Neumann and R Schuch
- 655–664 Exchange in electron impact ionization: Triple differential measurements with polarized beams
L Frost, G Baum, W Blask, P Freienstein, S Hesse and W Raith
- 665–674 Coincidence measurements of Auger lineshapes
B Lohmann
- 675–682 Ionization in collisions between Na and Cs atoms
C Gabbanini, S Gozzini, A Lucchesini and L Moi

- 683–692 Ejected electron spectra of doubly excited states from double capture in collisions of bare ions with helium atoms
C D Lin, Z Chen and R Shingal
- 693–699 Evidence for interference between resonant and nonresonant transfer and excitation
M Benhenni, S M Shafrroth, J K Swenson, M Schulz, J P Giese, H Schone, C R Vane, P F Dittner and S Datz
- 701–702 Author Index
- 703–704 Subject Index
