CONTENTS

INTRODUCTORY LECTURES

Lecture 1: Computer Methods in Radiation Protection as Viewed by a User 9
Graham R. Stevenson

Lecture 2: The Physics of Radiation Transport 17
Keran O'Brien

LOW ENERGY NEUTRON AND GAMMA-RAY PROGRAMS AND THEIR APPLICATIONS

Lecture 3: The Methods and Applications of Discrete Ordinates in Low Energy Neutron-Photon Transport (ANISN, DOT) Part I: Methods 59
W. W. Engle, Jr.

Lecture 4: The Methods and Applications of Monte Carlo in Low Energy (≤ 20 MeV) Neutron-Photon Transport (MORSE) Part I: Methods. 77
T. A. Gabriel

Lecture 5: The Methods and Applications of Discrete Ordinates in Low Energy Neutron-Photon Transport (ANISN, DOT) Part II: Applications 97
W. W. Engle, Jr.

Lecture 6: The Methods and Applications of Monte Carlo in Low Energy (≤ 20 MeV) Neutron-Photon Transport (MORSE) Part II: Applications 99
T. A. Gabriel

Lecture 7: The European Shielding Information Service - ESIS 121
C. Ponti

Lecture 8: Cross Section Processing Codes and Data Bases (AMPX). 123
W. W. Engle, Jr.

Lecture 9: Radiation Shielding Information Center and Biomedical Computing Technology Information Center 125
T. A. Gabriel

Lecture 10: Approximate Methods in Reactor Shielding Calculations 127
C. Ponti

ELECTROMAGNETIC CASCADE SHOWER PROGRAMS AND THEIR APPLICATIONS

Lecture 11: The Physics of Electromagnetic Cascade 141
Keran O'Brien

Lecture 12: Solution of the Electromagnetic Cascade Shower Problem by Analog Monte Carlo Methods - EGS 173
Walter R. Nelson

Lecture 13: Some Examples for the Application of the Monte Carlo Code EGS 197
Herbert Dinter

Lecture 14: Calculation of the Average Properties of Electromagnetic Cascades at High Energies (AEGIS) 211
A. Van Ginneken

Lecture 15: Electron Dosimetry Using Monte Carlo Techniques 223
Keran O'Brien

Lecture 16: Application of EGS to Detector Design in High Energy Physics 239
Walter R. Nelson

Lecture 17: Application of EGS and ETRAN to Problems in Medical Physics and Dosimetry 253
Walter R. Nelson

HADRONIC CASCADE PROGRAMS AND THEIR APPLICATIONS

Lecture 18: Introduction to Hadronic Cascades 269
Tony W. Armstrong

Lecture 19: Particle Production Models, Sampling High-Energy Multiparticle Events from Inclusive Single-Particle Distributions 279
J. Ranft

Lecture 20: The Intranuclear-Cascade-Evaporation Model 311
Tony W. Armstrong

Lecture 21: Calculation of the Average Properties of Hadronic Cascades at High Energies (CASIM) 323
A. Van Ginneken

Lecture 22: The FLUKA and KASPRO Hadronic Cascade Codes 339
J. Ranft

Lecture 23: The HETC Hadronic Cascade Code 373
Tony W. Armstrong

UNFOLDING METHODS AND SPECTRUM ANALYSIS

Lecture 24: Unfolding Techniques for Activation Detector Analysis 389
J. T. Routti and J. V. Sandberg

Lecture 25: Bremsstrahlung Spectrum Analysis by Activation Method (LYRA, DIBRE, REFUM) 409
Takashi Nakamura

Lecture 26: Application of Activation-Spectrum Analysis Method to Shielding (TAURUS, LYRA, DIBRE, SAND-II) 443
Takashi Nakamura

Lecture 27: Activation Detectors and Their Gamma Spectrum Analysis 479
M. J. Koskelo and J. T. Routti

INVITED PRESENTATIONS FROM STUDENTS AND SUMMARY LECTURE

Monte Carlo Calculation of Exposure Rates in Dwelling Rooms 501
Laszlo Koblinger

Integral Equation for Radiation Transport - ASFIT 503
V. Sundara Raman

Thermal Effects Induced by High Energy Protons in Target and Absorber Materials 507
P. Sievers

Summary Lecture 511
Graham R. Stevenson

Participants 513

Index 515
