Contents

I. General Properties of Particles and Radiation, by *David M. Ritson* 1
1. Introduction 1
2. Interaction with the Electromagnetic Field 2
3. Coulomb Scattering by Nuclei 4
4. Multiple Coulomb Scattering 7
5. Total Ionization Losses and Probable Ionization Losses. 11
6. Range-Energy Curves and Ionization Potentials 13
7. Delta-Ray Losses 14
8. Ionization Plateau and Density Effect 16
9. Collision Processes and the "Geometric Cross Section" .. 18
10. Fluctuations in Ionization Losses 18
11. Fluctuations in Range 23
12. Kinematic Considerations on Decay Processes 24
13. Kinematic Correlations in Decay Processes 32
14. Electromagnetic Interactions 36
15. Electromagnetic Radiation Processes 44
16. Electromagnetic Cascade Showers 48
17. Neutral-Particle Detection 50

II. Diffusion Cloud Chambers, by *R. Schluter* 55
1. Introduction 55
2. Theory of the Diffusion Cloud Chamber 56
3. Basic Structural Features 67
4. Photography and Measurement 71
5. Special Features 76
6. Examples 78

III. Bubble Chambers, by *I. A. Pless* 87
1. Principal Features of Bubble Chambers 87
2. Theory of Bubble Chambers 90
3. Operation of Bubble Chambers 94
4. Construction of Bubble Chambers 95
5. Optical Systems 102
6. Measuring Techniques 108
7. Conclusion 111

IV. Nuclear Emulsions, by *Mildred Widgoff* 115
1. Historical Introduction 115
2. The Photographic Process 120
3. Destruction of the Latent Image 123
4. Storage of Emulsions 125
5. Special Techniques 128
6. Processing Techniques 137
7. Scanning 143
8. Characteristics of Tracks 148
9. Range Measurements 151
10. The Range-Energy Relation; Theoretical and Experimental 153
11. Measurement of Ionization Loss 160
12. Multiple Coulomb Scattering 168
13. Curvature in a Magnetic Field 182
14. Identification of Particles 182
15. Determination of Charge 189
16. Conclusion 194
17. Appendix I 195
18. Appendix II 198

V. Digital Computers, by *D. O. Caldwell* and *J. E. Flanagan* ... 207
1. Introduction 207
2. General Information 211
3. Programming 216
4. Programming Aids 226
5. Computer Characteristics 240
6. A Typical Computer Application 246
7. Appendix 253
8. Note Added in Proof 266

VI. Ionization Counters, by *R. Wilson* 271
1. Introduction 271
2. Energy Measurement by Ionization Loss 272
3. Electrostatics of Pulse Formation 282
4. Use of the Output Pulse 288
5. Examples of Use 295

VII. Scintillation and Cerenkov Counters 301
Part I., by *D. M. Ritson*
1. Introduction 301
2. Theory of Fluorescence 301
3. Photomultiplier Tubes 305
4. Magnetic Shielding of Photomultipliers 311
5. Light-Collection Problems 312
6. Radioactive Test Sources 316
7. Solid Scintillation Chambers and Hodoscopes 316
8. Theory of Cerenkov Counters 318

9. Threshold Cerenkov Detector 320
10. Light-Focusing Cerenkov Counters 322
11. Total-Energy-Loss Counters 325

Part II, by *R. Weinstein*

1. Systems Employing Scintillators and Cerenkov Counters. 326
2. Momentum Measurements 327
3. Thin Detectors 331
4. Counter Telescopes 335
5. Nuclear Absorption 342
6. Multicounter Telescopes 343
7. Coulomb Scattering 344
8. Pulse-Height Resolution of Detectors 348
9. Neutral-Particle Detection 353
10. Time of Flight 355
11. Examples of Counter Systems 357

VIII. Use of Transistors in High-Energy Physics Research, by *V. L. Fitch* 365
1. Introduction 365
2. Pertinent Properties of Germanium and Silicon 366
3. The *p-n* Junction 370
4. The *p-n-p* Junction Transistor 377
5. Circuits 393

IX. Beam Optics, by *D. Luckey* 403
1. Introduction 403
2. Various Elements for Beam Optics 403
3. Combination of Simple Elements 419
4. Magnetic Field Design 436
5. Experimental Determination of System Performance 449
6. High-Intensity Pulsed Magnetic Fields in Particle Physics, by *R. Schluter* 453

X. Target Preparation, by *G. S. Janes* 465
1. Introduction 465
2. Materials 465
3. Gas Targets 468
4. Liquid Targets 469
5. Styrofoam-Insulated Liquid Targets 470
6. Vacuum-Insulated Liquid Targets 471
7. Deuterium Systems 472
8. Gas Handling 475
9. Monitoring of Liquid Target Cells 476
10. Thermal Efficiency 476
11. Radiation Losses 477
12. Conduction through the Target Structure 478

13. Ortho-Para Conversion 478
14. Vacuum Design 478
15. Materials 479
16. Construction of Joints 480
17. Thin Windows 481
18. The Liquid Hydrogen Cell 481
19. Transfer Techniques 483
20. Safety 483

XI. Beam Monitoring Methods 487

Part I: Monitoring High-Energy Proton Beams, by *D. O. Caldwell*

1. Introduction 487
2. Relative Monitors 487
3. Absolute Monitors—Faraday Cup 501
4. Beam Integration and Integrator Calibration 504

Part II: Monitoring High-Energy Electron and x-ray Beams, by *G. S. Janes*

1. Introduction 508
2. Maximum-Beam-Energy Monitors 510
3. Monitoring the Total Energy in the Beam 511
4. Monitoring the Number of Incoming Photons or Electrons 514
5. Time and Space Distribution 517

Appendix I. Physical and Universal Constants 521

Appendix II. Shielding Figures for Various Materials 521

Appendix III. Information on Radiation Units and Permissible Radiation Levels for Experimental Purposes 522

Appendix IV. Comparison of Techniques and Accuracy Attainable 524

Appendix V. Ionization and Range Curves Including Corrections for Density Calculated by R. M. Sternheimer 526

Appendix VI. Pulsed Spark Counters, Spark Chambers, and Geiger Tubes 530

Index 533
