

CONTENTS

1.	Introduction	1
2.	Nuclear Size and Nuclear Shapes	5
2.1	Scattering Methods	6
2.2	Electromagnetic Methods	11
2.3	Nuclear Shapes	30
2.4	Electric Moments	31
2.5	Magnetic Moments	39
3.	The Two-Nucleon Problem	46
3.1	Introduction	46
3.2	The Ground State of the Deuteron	49
3.3	Excited States of the Deuteron	53
3.4	Neutron-Proton Scattering at Low Energies	55
3.5	Scattering Length	58
3.6	Spin Dependence of Neutron-Proton Scattering	59
3.7	Singlet State in n - p System	62
3.8	Effective Range Theory in n - p Scattering	63
3.9	Significance of the Sign of the Scattering Length	66
3.10	Coherent and Incoherent Scattering	66
3.11	Tensor Forces and the Deuteron Problem	72
3.12	Proton-Proton Scattering at Low Energy	80
3.13	Analysis of n - p and p - p Scattering	84
3.14	Interpretation of p - p and n - n Scattering	92
3.15	Polarization	94
3.16	Photodisintegration of the Deuteron	97
4.	Phenomenology of the Two-Nucleon Interaction	111
4.1	Introduction	111
4.2	Phase-Shift Analysis	112

4.3	<i>S</i> -Matrix Approach	115
4.4	Experimental Scattering Parameters	119
4.5	Phase-Shift Analysis of Experimental Parameters	122
4.6	Phenomenological Two-Nucleon Potential	123
4.7	Meson Theoretical Potential	134
4.8	Conclusion	138
5.	Semi-Empirical Mass Formulas and Nuclear Fission	141
Part I.	Semi-Empirical Mass Formulas	141
5.1	Potential Energy	143
5.2	Kinetic Energy	146
5.3	Coulomb Energy	150
5.4	Pairing Energy	150
5.5	Shell Effect	154
5.6	Atomic Masses	156
5.7	Significance of Atomic Mass	159
Part II.	Nuclear Fission	160
5.8	Cross Section	160
5.9	Spontaneous Fission	162
5.10	Mass and Energy Distribution of Fragments	164
5.11	Liquid-Drop Model	166
5.12	Barrier Penetration	173
5.13	Comparison with Experiment	174
5.14	Statistical Model of Fission	175
5.15	Photofission	179
6.	Nuclear Reactions I: Compound Nucleus and Statistical Model	184
6.1	Nuclear Reactions and Cross Sections	184
6.2	Resonance: Breit-Wigner Dispersion Formula for $l = 0$	189
6.3	Breit-Wigner Dispersion Formula for All Values of l	196
6.4	The Compound Nucleus	200
6.5	Continuum Theory of Cross Section σ_C	204
6.6	Statistical Theory of Nuclear Reactions	205
6.7	Evaporation Probability and Cross Sections for Specific Reactions	208
6.8	Experimental Results	210

7.	Nuclear Model I: Nuclear-Shell Model	227
7.1	Introduction	227
7.2	Single-Particle Potentials	228
7.3	Spin-Orbit Potential	234
7.4	Analysis of Shell Model Predictions	236
7.5	Single-Particle Model	238
7.6	Total Spins J for Various Configurations $(j)^k$	239
7.7	Nuclear Isomerism	243
7.8	Magnetic Moment	244
7.9	Configuration Mixing	245
7.10	Individual (Independent)-Particle Model	248
7.11	Russell-Saunders Coupling (L-S Coupling)	251
7.12	j - j Coupling Scheme	253
7.13	Transformation between the L-S and the j - j Coupling Schemes	255
7.14	Coefficient of Fractional Parentage (cfp)	255
7.15	Beta decay	258
8.	Nuclear Model II: Unified (Collective) Model	262
8.1	Introduction	262
8.2	Nuclear Rotational Motion: Rotational Energy Spectrum and Nuclear Wave Functions for Even-Even Nuclei	263
8.3	Odd- A Nuclei: Energy Spectrum and Wave Function	266
8.4	Nuclear Moments	271
8.5	Collective Vibrational Excitations	280
8.6	Collective Oscillations: Liquid-Drop Model	281
8.7	Quadrupole Deformation	286
8.8	Nuclear Moments	288
8.9	Davydov and Filippov's Model	292
8.10	Nilsson Potential	301
8.11	Coupling between Modes of Collective Excitation	311
8.12	Rotation-Particle Coupling	313
8.13	Core Excitation	315
9.	Many-Body Treatment of the Nucleus	320
9.1	Introduction	320
9.2	Reaction Matrix	322
9.3	Transformation to Coordinate Space: Nuclear Matter	325
9.4	Two-Particle Wave Function	327
9.5	Partial Wave Analysis	329

9.6	Treatment of the Problem with a Hard Core in the Two-Nucleon Potential	333
9.7	Bethe-Goldstone's Treatment of the Repulsive Core	335
9.8	Theory of the Finite Nucleus	341
10.	Nuclear Reactions II: Optical Model	353
10.1	Introduction	353
10.2	Optical Model at Low Energies	356
10.3	Kapur-Peierls Dispersion Formulas for Potential Scattering	358
10.4	Dispersion Formula for the Many-Body Case	363
10.5	Lane, Thomas and Wigner Model: Giant Resonances	366
10.6	Optical Model, Experimental	369
10.7	Conclusion	389
11.	Nuclear Reactions III: Direct Reactions	393
11.1	Introduction	393
11.2	Kinematics of the Stripping and Pick-up Reactions	395
11.3	Theory of the Stripping and Pick-up Reactions	398
11.4	Reverse Reaction	404
11.5	Stripping Reaction	406
11.6	Distorted-Wave Method	417
11.7	Direct Processes (Inelastic Scattering or Surface Reaction)	421
12.	Electromagnetic Interactions with Nuclei	434
12.1	The Multipole Expansion	434
12.2	Sources of Multipole Radiation	442
12.3	Multipole Moments	445
12.4	Angular Distribution of the Multipole Radiation	448
12.5	Parity Considerations and Selection Rules	450
12.6	γ -Decay Transition Probabilities in Nuclear Systems	451
12.7	Quantum Mechanical Derivation of the Transition Probabilities	453
12.8	The Cross Section of $p + n \rightleftharpoons D + \gamma$	456
12.9	The Internal Conversion Phenomenon	470
12.10	Gamma-Gamma Angular Correlation	480
13.	Beta Decay	496
13.1	Introduction	496
13.2	Experimental Verification of the Existence of the Neutrino	497

13.3	Interaction Operators	503
13.4	Interaction Hamiltonian for Beta Decay	504
13.5	Transition Probability for Beta Decay	506
13.6	Nuclear Matrix Elements for Unpolarized Initial and Final Nucleus	508
13.7	Nuclear Matrix Elements for Beta Decay of Polarized Nuclei	510
13.8	Fermi and Gamow-Teller Selection Rules for Allowed Beta Decay	511
13.9	Matrix Elements between Lepton States for Unpolarized Electron and Neutrino	513
13.10	Polarization of Electrons in Beta Emission	520
13.11	Beta Decay from Oriented (Polarized) Nuclei	523
13.12	General Expressions	527
13.13	Two-Component Theory of the Neutrino	531
13.14	Conservation of Leptons	534
13.15	Conservation of Vector Current (CVC) Theory	535

Appendix **541**

Mathematical Preliminaries **541**

A.1	Expression for ∇ , ∇^2 and $\mathbf{l} = \mathbf{r} \times \mathbf{p}$ in Different Coordinate Systems	541
A.2	Spherical Harmonics	543
A.3	Three-Dimensional Square-Well Potential	545
A.4	Plane-Wave Expansion in Spherical Harmonics	548
A.5	Spherical Harmonics: Transformation Properties under Rotation	548
A.6	Properties of the D -Matrices	550
A.7	Addition of Two Angular Momenta	552
A.8	Explicit Expressions for the Clebsch-Gordan Coefficients	554
A.9	Coupling of Three Angular Momenta	555
A.10	Further Discussion of the Rotation Matrix D	558
A.11	The Wigner-Eckart Theorem	560
A.12	Scattering of a Particle by a Central Potential	563
A.13	The Scattering Matrix: S -matrix	566
A.14	Scattering by a Coulomb Field	568
A.15	Scattering by Combined Nuclear and Coulomb Potentials	572
A.16	Tensor Operator	573
A.17	Scattering Phase-Shift Analysis with Tensor Forces	576
A.18	Isotopic Spin of the Nucleon	582

xii CONTENTS

A.19	Two-Nucleon Wave Function in Isospin Space	583
A.20	Complete Wave Function for the Two-Nucleon System: Pauli Principle	584
A.21	Dirac Equation	585
