CONTENTS

PART I. DETECTION METHODS

Hans H. Staub

2. Fundamental Principles of Particle Detection A. The Motion of Ions and Electrons in Gases. B. Ionization Chambers. C. Proportional Counters. D. Geiger-Müller Counters. E. Crystal Counters. F. Scintillation Counters. G. Cloud Chambers. H. The Photographic Plate. I. Cerenkov Counter. 3. Electronic Instruments 72 A. Amplifiers. B. Discriminators and Scaling Circuits. C. Miscellaneous Circuits. D. Integrating Instruments. 4. Typical Constructions and Methods of Operation of Counters and Cloud Chambers A. Counters for Alpha-Particles and Protons. B. Neutron Detectors. C. Detectors for Beta- and Gamma-Rays. D. Cloud Chambers.

PART II. PASSAGE OF RADIATIONS THROUGH MATTER

Hans A. Bethe and Julius Ashkin

1. The Passage of Heavy Particles through Matter

A. The Range-Energy Relation. B. Relation between Energy Loss and Ionization. C. Straggling. Determination of the Mean Range from the Extrapolated Range. D. Elastic and Inelastic Scattering of Heavy Particles by Atoms.

2. Penetration of Beta-Rays through Matter

1. Introduction

A. Energy Loss. B. Intensity and Angular Distribution of the Radiation Emitted by a Fast Electron. C. Secondary Electrons. D. Elastic Scattering of Electrons by Atoms. E. Multiple Scattering of Charged Particles. F. Penetration through Foils. Energy Measurements.

3. Penetration of Gamma-Rays A. Photoelectric Effect. B. Compton Scattering. C. Pair Creation. D. The Total Absorption Cross Section. E. Nuclear, Meson, and Other Small Effects.

PART III. NUCLEAR MOMENTS AND STATISTICS

Norman F. Ramsey

1. Introduction to Nuclear Moments and Statistics A. General Characteristics.

2

Contents

2.	 Interaction of a Nucleus with Atomic and Molecular Fields A. Electrostatic Interaction. B. Magnetic Interaction. C. Appendix A. Form of Nuclear Electrical Quadrupole Moment Interaction. D. Appendix B. Theoretical Restrictions on the Orders of Electrical Multipoles. E. Appendix C. Magnetic Hyperfine Structure Constants. 	360
3.	Experimental Methods of Measuring Nuclear Moments and Statistics A. Hyperfine Structure in Optical Atomic Spectra. B. Band Spectra Meas- urements. C. Molecular and Atomic Beam Non-Resonance Methods. D. Molecular Beam Resonance Methods. E. Neutron Beam Resonance Method. F. Nuclear Resonance Absorption and Induction Methods. G. Microwave Spectroscopy Methods. H. Miscellaneous Methods.	383
4.	Results of Measurements of Nuclear Moments and Statistics A. Results of Experiments to Determine an Absolute Scale for Nuclear Mag- netic Moment Measurements. B. Magnetic Shielding and Resonance Shifts. C. Nuclear Moment Tables. D. Significance of Some Nuclear Moment Re- sults.	426
	Part IV. Nuclear Two-Body Problems and Elements of Nuclear Structure	
Norman F. Ramsey		
1.	Introduction A. Neutrons and Protons as Elementary Constituents of Nuclei. B. Nature of Nuclear Forces.	468
2.	Nuclear Two-Body Problems	474
	A. The Deuteron. B. Scattering of Neutrons by Free Protons. C. Photodis- integration of the Deuteron. D. Neutron-Proton Capture. E. Proton-Proton Scattering. F. Meson Theories of Nuclear Forces.	
3.	Heavier Nuclei	536
	A. Nuclear Three- and Four-Body Problems. B. Nuclei Heavier than Helium.	
	Part V. Charged Particle Dynamics and Optics, Relative Isotopic Abundances of the Elements, Atomic Masses	
	K. T. Bainbridge	
1.	Introduction	559

- The Deflection and Focusing of Charged Particles in Magnetic and Electric Fields 566
 A. Combined Cylindrical Condenser Electric Field and Uniform Magnetic Field. B. The Focusing of Charged Particles by a Spherical Condenser. C. Sectorial Magnetic Field. D. Ion Optics. E. Mass Spectrographs. Double Focusing for All Masses. F. Crossed Electric and Magnetic Fields. Tro-
- 3. The Relative Abundance of Isotopes 614 A. Introduction. Applications of Abundance Measurements. B. Mass

choidal Trajectories. G. Focusing in Non-Uniform Fields.

viii

Contents

Spectrometers. C. Possible Sources of Error in Mass Spectrometer Measurements.

4. The Measurement of Isotopic Weights

A. Mass Spectrograph Measurement of Isotopic Weights. B. Mass Spectrometer Measurement of Isotopic Weights. C. Radiofrequency Spectrometers for Accurate Isotopic Weight Determination. D. Isotopic Weights from Microwave Spectra. E. Nuclear Reactions. F. Isotopic Weights. Tables: Mass Spectrograph Doublet Measurements. Nuclear Reaction Q Values. Isotopic Weights.
