## VOLUME 1

*Page*

- v PREFACE
- vii CONTENTS OF VOLUMES 1 AND 2
- xxi LIST OF CONTRIBUTORS
- xxv ALPHA-, BETA- AND GAMMA-RAY SPECTROSCOPY, INTRODUCTION by K. Siegbahn

### CHAPTER I

- 1 INTERACTION OF ELECTRONS AND  $\alpha$ -PARTICLES WITH MATTER by G. Knop and W. Paul
- 1 INTERACTION OF ELECTRONS
  - § 1. Elastic scattering of electrons by atomic nuclei 1
  - 2. Energy loss 9
- 25 INTERACTION OF  $\alpha$ -PARTICLES
  - 3. Energy loss 25
  - 4. Elastic scattering 35

### CHAPTER II

- 37 INTERACTION OF  $\gamma$ -RADIATION WITH MATTER by C. M. Davisson
  - § 1. Introduction 37
  - 2. Photoelectric effect 42
  - 3. Scattering by electrons 49
  - 4. Pair production 62
  - 5. Nuclear interactions and Delbrück scattering 70
  - 6. Total attenuation coefficients 74
  - 7. Absorption methods 76

### CHAPTER III

- 79 BETA-RAY SPECTROMETER THEORY AND DESIGN. MAGNETIC ALPHA-RAY SPECTROSCOPY. HIGH RESOLUTION SPECTROSCOPY by K. Siegbahn
  - § 1. Introduction. General discussion of spectrometers 79
  - 2. Some basic relations in  $\beta$ -spectroscopy 82
  - 3. Nomenclature 85
  - 4. The semicircular spectrometer 87
  - 5. The double focussing spectrometer 96
  - 6. Sector field spectrometers 119
  - 7. Some proposed high transmission instruments 139
  - 8. Lens spectrometers 145

- 9. Magnetic  $\alpha$ -ray spectrosopes 167
- 10. Electrostatic spectrometers 172
- 11. Precision spectroscopy 176

#### CHAPTER IV

### 203 CRYSTAL DIFFRACTION SPECTROSCOPY OF NUCLEAR $\gamma$ -RAYS by J. W. Knowles

- § 1. Introduction 203
- 2. Theory of crystal diffraction spectrometers 205
- 3. Curved crystal spectrometers 218
- 4. A flat crystal spectrometer 232

#### CHAPTER V

### 245 THE SCINTILLATION METHOD by J. H. Neiler and P. R. Bell

- § 1. The scintillation counter 245
- 2. Methods for charged particle spectrometry 246
- 3. Methods for  $\gamma$ -rays 253
- 4. Factors affecting resolution 271
- 5. Crystal preparation and mounting 281
- 6. Crystal efficiency and linearity 284
- 7. Coincidence spectrometry 295

#### CHAPTER VI

### 303 PARTICULAR DETECTION METHODS by S. C. Curran and H. W. Wilson; W. M. Gibson, G. L. Miller and P. F. Donovan

#### 303 (A) PROPORTIONAL COUNTERS AND PULSE ION CHAMBERS by S. C. Curran and H. W. Wilson

- § 1. Introduction 303
- 2. Volts per ion pair,  $W$  304
- 3. Statistical fluctuations in pulse size and resolution 306
- 4. Ion chambers for alpha-particle spectroscopy 310
- 5. Proportional-counter alpha-spectroscopy 320
- 6. Proportional counters for beta and gamma-ray spectroscopy 323
- 7. Low background counting 330
- 8. Carbon-14 age determinations 336
- 9. Other applications of proportional counters 337
- 10. High-pressure proportional counters 339
- 11. High-temperature counters 341
- 12.  $4\pi$  counters for absolute activity measurements 342
- 13. Conclusion 344

#### 345 (B) SEMICONDUCTOR PARTICLE SPECTROMETERS by W. M. Gibson, G. L. Miller and P. F. Donovan

- § 1. Introduction 345
- 2. Charge collection 348
- 3. Detector noise 352
- 4. Radiation damage 355

- 5. Electronics 356
- 6. Detectors types 359
- 7. Application to nuclear physics 363

## CHAPTER VII

- 379 SOME EXPERIMENTAL TECHNIQUES by W. C. Parker and H. Slätis; F. S. Goulding; R. A. Allen
- 379 (A) SAMPLE AND WINDOW TECHNIQUE by W. C. Parker and H. Slätis
  - § 1. Introduction 379
  - 2. Thin foil and film technique 381
  - 3. Estimation of foil thickness 384
  - 4. Deposition technique 385
  - 5. Window absorption correction 402
  - 6. Acceleration of electrons 406
- 409 (B) INTENSITY DETERMINATION OF PHOTOGRAPHICALLY RECORDED CONVERSION LINES by H. Slätis
- 413 (C) MULTI-CHANNEL PULSE-AMPLITUDE ANALYZERS by F. S. Goulding
  - § 1. Introduction 413
  - 2. Multi-discriminator analyzers 413
  - 3. Gray-wedge analyzers 415
  - 4. Amplitude-time conversion 416
  - 5. Computer storage techniques applied to analyzers 417
  - 6. Description of a typical analyzer with magnetic-core storage 418
  - 7. Multi-parameter analyzers 421
  - 8. Multi-scaler applications of analyzers 423
- 425 (D) MEASUREMENT OF SOURCE STRENGTH by R. A. Allen
  - § 1. Introduction 425
  - 2. Direct counting methods 427
  - 3. Coincidence counting 443
  - 4. Choice of counting method 455
  - 5. Indirect methods 457

## CHAPTER VIII

- 467 PROCEDURES FOR THE INVESTIGATION OF DISINTEGRATION SCHEMES by A. C. G. Mitchell †; R. van Lieshout, A. H. Wapstra, R. A. Ricci and R. K. Girgis
- 467 (A) GENERAL PROCEDURES by A. C. G. Mitchell † 467
  - § 1. Introduction 467
  - 2. The preparation of the source material 469
  - 3. The calibration of instruments 469
  - 4. The search for  $\gamma$ -rays and the measurement of their energy 470
  - 5. The determination of the relative intensity of  $\gamma$ -rays 475
  - 6. The measurement of the  $\beta$ -rays 485
  - 7. The Fermi plot; end points and  $\beta$ -ray groups 488

- 8. Determination of comparative half-lives  $ft$  491
  - 9. Determination of internal conversion coefficients 492
  - 10. Examples of some disintegration schemes 495
- 501 (B) SCINTILLATION SPECTRA ANALYSIS by R. van Lieshout, A. H. Wapstra, R. A. Ricci and R. K. Girgis
- § 1. Introduction 501
  - 2. General considerations 502
  - 3. Measurement of  $\gamma$ -ray scintillation spectra 507
  - 4. Determination of the response function 519
  - 5. Analysis of a spectrum by the peeling method 524
  - 6. Determination of energies and intensities 526
  - 7. Special applications 532
  - 8. Beta-rays 534
  - 9. Computer analysis of scintillation spectra 537
- 539 (C) THE COINCIDENCE METHOD by A. H. Wapstra
- § 1. Introduction 539
  - 2. Definitions 541
  - 3. Principles; errors 542
  - 4. Hardware 544
  - 5. A versatile coincidence circuit arrangement 547
  - 6. Geometries in electron- $\gamma$ -ray coincidences 549
  - 7. Geometries in  $\gamma$ - $\gamma$  coincidences 551
  - 8. Pile-up dangers 552
  - 9. Applications 553

## CHAPTER IX

- 557 THE SHELL MODEL by M. Goeppert Mayer and J. H. D. Jensen; D. Kurath
- 557 (A) SHELL CLOSURE AND  $jj$  COUPLING by M. Goeppert Mayer and J. H. D. Jensen
- § 1. Introduction 557
  - 2. Magic numbers, or shell numbers 559
  - 3. Level sequence in the shell model 561
  - 4. Remarks on spin-orbit coupling 565
  - 5. Parity and orbital angular momentum 566
  - 6. Nuclei with incompletely filled shells 567
  - 7. Pairing energy 570
  - 8. Level occupation scheme 572
  - 9. Isomerism in nuclei of odd  $A$  572
  - 10. Beta-decay 578
  - 11. Alpha-decay 580
  - 12. Center of mass motion 581
- 583 (B) INTERMEDIATE COUPLING by D. Kurath
- § 1. Modification of the independent-particle model 583
  - 2. Intermediate coupling calculations 583
  - 3. Rotational interpretation 592
  - 4. Other interaction calculations 595

## INTRODUCTION TO CHAPTER X

- 597 EVOLUTIONARY TRENDS IN NUCLEAR SPECTROSCOPY by A. Bohr and  
B. R. Mottelson

## CHAPTER X

- 601 COLLECTIVE NUCLEAR MOTION AND THE UNIFIED MODEL by O. Nathan and  
S. G. Nilsson
- § 1. Introduction. General trends of nucleonic correlations 601  
2. Polarization effects of particles outside of closed shells 617  
3. Spherical nuclei 623  
4. Nuclei with stable quadrupole deformations 644  
5. Microscopic theory of collective motion and the theoretical estimates of the collective  
parameters 684  
Acknowledgement 700

## CHAPTER XI

- 701 ALPHA-DECAY by J. O. Rasmussen
- § 1. Introduction 701  
2. Alpha-decay conservation laws 702  
3. Decay energies and spectra of  $\alpha$ -emission 708  
4. Treatment of  $\alpha$ -decay data 712  
5. Decay rates of spherical nuclei 716  
6. Decay rate theory including non-central interactions 730  
7. Decay rates of odd-mass and odd-odd nuclei 736

## CHAPTER XII

- 745 GAMMA-RADIATION FROM CHARGED PARTICLE BOMBARDMENT;  
COULOMB EXCITATION by D. Alburger
- § 1. Introduction 745  
2. Coulomb excitation 746  
3. Gamma-radiation from nuclear reactions 750  
4. Gamma-ray energy and intensity measurements 754  
5. Particle- $\gamma$  coincidences 761  
6. Angular distributions and angular correlations 762  
7. Gamma-ray lifetime measurements 764

## CHAPTER XIII

- 769 NEUTRON CAPTURE RADIATION SPECTROSCOPY by H. Motz and  
G. Bäckström
- § 1. Introduction 769  
2. The neutron capture process 772  
3. Experimental arrangements for thermal  $\gamma$ -ray spectra 775  
4. Internal conversion and pair production 789  
5. Coincidence techniques 794  
6. Properties of levels 798

7. Decay scheme of the compound nucleus 800  
  General review 801  
  Addendum 803

#### CHAPTER XIV

- 805 GAMMA-RADIATION FROM FISSION by S. A. E. Johansson and P. Kleinheinz

- § 1. Introduction 805  
  2. Experiments and results 806  
  3. Interpretation 821  
  4. Discussion 824

#### APPENDIX 1

- 827 GAMMA-RAY ATTENUATION COEFFICIENTS by C. M. Davisson

#### APPENDIX 2

- 845 ELECTRON BINDING ENERGIES AND KINETIC ENERGY VERSUS MAGNETIC RIGIDITY by S. Hagström, C. Nordling and K. Siegbahn
