

VOLUME 2**XLIII CONTENTS OF VOLUMES 1 AND 2****CHAPTER XV**

- 863 **THEORY OF MULTIPOLE RADIATION** by S. A. Moszkowski

- § 1. Introduction 863
- 2. The multipole radiation field 866
- 3. Gamma-decay transition probabilities for a single particle 871
- 4. Gamma-ray transition probabilities for some many-particle configurations 883

CHAPTER XVI

- 887 **THEORY OF INTERNAL CONVERSION** by M. E. Rose

- § 1. Role of internal conversion in nuclear spectroscopy 887
- 2. Formal consideration of the internal conversion process 889
- 3. Qualitative discussion of the internal conversion coefficients 893
- 4. Effects of finite nuclear size 894
- 5. Numerical values of internal conversion coefficients 899
- 6. Some comments on small effects 903

CHAPTER XVII

- 905 **COINCIDENCE TECHNIQUES AND THE MEASUREMENT OF SHORT MEAN LIVES** by R. E. Bell

- § 1. Coincidence circuits 905
- 2. Measurement of short mean lives of excited states 910
- 3. The delayed coincidence method 911
- 4. Physical limits on time resolution 916
- 5. Statistical limits on coincidence measurements 917
- 6. Evaluation of delayed coincidence experiments 921
- 7. A fast time-to-amplitude converter 922
- 8. Calibration methods and auxiliary apparatus 924
- 9. Direct timing methods 926
- 10. Recoil and Doppler methods 927

CHAPTER XVIII

- 931 **EXPERIMENTS ON TRANSITION RATES AND INTERNAL CONVERSION** by M. Goldhaber and A. W. Sunyar; G. T. Ewan and R. L. Graham; T. R. Gerholm and B. G. Pettersson

- 931 (A) **CLASSIFICATION OF NUCLEAR TRANSITION RATES** by M. Goldhaber and A. W. Sunyar

- § 1. Introduction 931
- 2. Selection rules 932
- 3. Experimental procedures 934
- 4. Some general experimental results 938

945	APPENDIX
§ 1. <i>K</i> -isomerism	945
2. Electric monopole (<i>E</i> 0) transitions	947
3. References to recent review articles	949
951	(B) INTERNAL CONVERSION STUDIES AT VERY HIGH RESOLUTION by G. T. Ewan and R. L. Graham
§ 1. Introduction	951
2. Multipolarities from conversion line intensity ratios	953
3. Application to nuclear level schemes	957
4. Natural widths of conversion lines	968
5. Relative and absolute energy standards	972
6. Concluding remarks	979
981	(C) SOME CONSEQUENCES OF THE FINITE NUCLEAR SIZE by T. R. Gerholm and B. G. Pettersson
§ 1. Introduction	981
2. Survey of experimental results	984
3. <i>E</i> 0 transitions	987
4. <i>M</i> I transitions	989
5. <i>E</i> I transitions	994
6. Conclusions	995
CHAPTER XIX	
997	ANGULAR DISTRIBUTION OF NUCLEAR RADIATION by H. Frauenfelder and R. M. Steffen; S. R. de Groot, H. A. Tolhoek and W. J. Huiskamp
997	(A) ANGULAR CORRELATIONS by H. Frauenfelder and R. M. Steffen
§ 1. Introduction	997
1001	PART I. FREE NUCLEI
2. Naive theory of γ - γ directional correlation in free nuclei	1002
3. General theory of angular correlation	1007
4. Gamma-gamma angular correlation	1027
5. Directional correlation involving conversion electrons	1045
6. Alpha-gamma directional correlation	1051
7. Beta-gamma angular correlation	1055
1101	PART II. THE INFLUENCE OF EXTRANUCLEAR FIELDS
8. Survey	1101
9. Theory of extranuclear perturbations	1104
10. The determination of <i>g</i> -factors of excited nuclear states	1151
11. Determination of the static quadrupole coupling	1170
12. The influence of preceding decays on angular correlations	1182
1188	PART III. EXPERIMENTAL METHODS
13. The determination of the true correlation	1188
14. The treatment of the experimental data	1189
1196	APPENDIX A
1197	APPENDIX B

1199 (B) ORIENTATION OF NUCLEI AT LOW TEMPERATURES by S. R. de Groot, H. A. Tolhoek and W. J. Huiskamp

- § 1. Introduction 1199
- 2. Theoretical description of nuclear orientation 1200
- 3. The angular distribution of nuclear radiation 1201
- 4. The directional distribution of γ -radiation 1203
- 5. Polarization distribution of γ -radiation 1207
- 6. The influence of transitions preceding the γ -radiation 1208
- 7. Theoretical results concerning β -radiation 1211
- 8. Directional distribution of α -particles 1221
- 9. Methods of nuclear orientation 1222
- 10. Gamma-radiation experiments 1232
- 11. Beta-asymmetry and beta-anisotropy experiments 1244
- 12. Alpha-radiation 1254
- 13. Fission 1256
- 14. Interaction of polarized nuclei with polarized neutrons 1256
- 15. Other topics 1258
- 16. Conclusions and outlook 1259

CHAPTER XX

1263 MEASUREMENTS OF SPINS AND MOMENTS OF GROUND STATES OF RADIOACTIVE NUCLEI by W. A. Nierenberg and I. Lindgren

- § 1. Introduction 1263
- 2. Important definitions 1264
- 3. The method of the spin Hamiltonian 1266
- 4. Experimental method 1270

CHAPTER XXI

1281 NUCLEAR RESONANCE FLUORESCENCE OF γ -RADIATION by K. G. Malmfors; R. L. Mössbauer

1281 (A) RESONANCE SCATTERING OF γ -RAYS by K. G. Malmfors

- § 1. Introduction 1281
- 2. General discussion 1282
- 3. Survey of experiments and methods 1285
- 4. Summary of results 1289

1293 (B) RECOILLESS NUCLEAR RESONANCE ABSORPTION AND ITS APPLICATIONS by R. L. Mössbauer

- § 1. Introduction 1293
- 2. The concept of recoilless γ -transitions 1293
- 3. Basic aspects of recoilless nuclear transitions 1294
- 4. Experimental procedures 1299
- 5. General applications 1302
- 6. Recoilless scattering from crystals 1308
- 7. The frequency distribution of the transmitted radiation and its time dependence 1310
- 8. Conclusion 1312

CHAPTER XXII

1313 THE CONSERVATION LAWS IN β -DECAY by C. S. Wu

- § 1. Introduction 1313
- 2. The conservation of energy in β -decay 1314
- 3. The law of the conservation of parity 1315
- 4. Invariance of time reversal 1316
- 5. Invariance under charge conjugation 1318
- 6. The *CPT*-theorem, *CP*-invariance 1319
- 7. Beta-coupling constants and non-conservation of *P*, *T* and *C* 1320
- 8. The conservation of leptonic and muonic numbers 1321

1323 APPENDICES

CHAPTER XXIII

1327 THE THEORY OF NUCLEAR β -DECAY by E. J. Konopinski and M. E. Rose

- § 1. The role of β -processes in nuclear spectroscopy 1327
- 2. The observational basis 1327
- 3. The law of β -interaction 1333
- 4. Allowed β -emissions 1337
- 5. Forbidden β -emissions 1345
- 6. Electron capture 1357

CHAPTER XXIV

1365 THE EXPERIMENTAL DETERMINATION OF THE β -INTERACTION by C. S. Wu; O. Kofoed-Hansen; M. Goldhaber, L. Grodzins and A. W. Sunyar; H. Frauenfelder and R. M. Steffen; F. Reines; S. P. Rosen and H. Primakoff1365 (A) THE SHAPE OF β -SPECTRA by C. S. Wu

- § 1. Introduction 1365
- 2. The allowed spectra 1365
- 3. Fierz interference terms for the allowed transitions 1369
- 4. Forbidden transitions 1371
- 5. The unique forbidden spectra 1372
- 6. Half-lives of the unique transitions 1376
- 7. First forbidden spectra 1379
- 8. Beta-spectrum of RaE 1381
- 9. Experimental test of the conserved vector current theory on the β -spectra of B^{12} and N^{12} 1384
- 10. Experimental results 1387
- 11. Small deviations in allowed spectra? 1388

1391 (B) THE REST MASS OF THE NEUTRINO by C. S. Wu

- § 1. Introduction 1391
- 2. Experimental results 1394

1397 (C) NEUTRINO RECOIL EXPERIMENTS by O. Kofoed-Hansen

- § 1. Introduction 1397
- 2. Two-body decays 1397

- 3. Beta-decay 1401
- 4. Neutron decay 1407
- 5. Difficulties with bound mother particle 1410
- 6. Interpretation of β -recoil experiments 1411

- 1415 (D) THE VIOLATION OF PARITY INVARIANCE by C. S. Wu
 - § 1. Pseudoscalar quantities in β -decay 1415
 - 2. The polarized Co⁶⁰ experiment 1416
 - 3. The two-component theory of the neutrino 1420

- 1423 (E) HELICITY OF THE NEUTRINO by M. Goldhaber, L. Grodzins and A. W. Sunyar

- 1431 (F) THE HELICITY OF β -PARTICLES by H. Frauenfelder and R. M. Steffen
 - § 1. Introduction 1431
 - 2. Theoretical background 1432
 - 3. Experimental methods 1437
 - 4. Results 1449

- 1453 (G) POLARIZATION OF RADIATION FOLLOWING β -DECAY by R. M. Steffen and H. Frauenfelder
 - § 1. Introduction 1453
 - 2. Polarization of nuclear state after β -decay 1454
 - 3. Theory of β - γ circular polarization correlation 1455
 - 4. Experimental methods of measuring the circular polarization of γ -radiation 1456
 - 5. Beta-gamma circular polarization correlation measurements 1465
 - 6. Polarization of conversion electrons following β -decay 1477
 - 7. Determination of the circular polarization of γ -rays with the Mössbauer effect 1489

- 1491 (H) INVERSE β -DECAY by F. Reines
 - § 1. Introduction 1491
 - 2. Examples of inverse β -decay under study 1493

- 1499 (J) DOUBLE β -DECAY by S. P. Rosen and H. Primakoff
 - § 1. Introduction 1499
 - 2. Experimental evidence 1503
 - 3. Theory of β^\mp -decay 1506
 - 4. Comparison of experimental and theoretical β^\mp -half-lives 1514
 - 5. Conclusion 1515

- 1517 (K) THE COUPLING CONSTANTS by O. Kofoed-Hansen
 - § 1. Introduction 1517
 - 2. The experimental evidence 1517
 - 3. The semi-empirical approach 1521
 - 4. Conclusions 1522

CHAPTER XXV

- 1523 SOME 'INTERNAL' EFFECTS IN NUCLEAR DECAY by I. Bergström and C. Nordling; A. H. Snell; R. Wilson; B. G. Pettersson

- 1523 (A) THE AUGER EFFECT by I. Bergström and C. Nordling
 - § 1. Introduction 1523
 - 2. Classification of Auger electrons 1524

	3. Energies of Auger electrons 1529
	4. Intensities of Auger electrons 1532
	5. Nuclear applications 1541
1545	(B) THE ATOMIC AND MOLECULAR CONSEQUENCES OF RADIOACTIVE DECAY by A. H. Snell
	§ 1. Introduction 1545
	2. Physical principles 1545
	3. Experimental 1546
	4. Experimental results: Effects in atoms 1548
	5. Effects in molecules 1553
	6. Effects in solids 1554
1557	(C) INTERNAL PAIR FORMATION by R. Wilson
	§ 1. Introduction 1557
	2. Theoretical predictions 1557
	3. Exact calculations 1559
	4. Schrödinger approximation 1560
	5. Summary of theoretical predictions 1561
	6. Magnetic spectrometer 1562
	7. Magnetic pair spectrometer 1564
	8. Detection by annihilation radiation 1565
	9. Counter telescopes 1566
	10. Cloud chamber measurements 1567
	11. Internal pair formation at high energies 1567
	12. Summary 1568
1569	(D) THE INTERNAL BREMSSTRAHLUNG by B. G. Pettersson
	§ 1. Internal bremsstrahlung in β -decay 1569
	2. Experimental results 1571
	3. Internal bremsstrahlung in electron capture 1574
	4. Circular polarization of internal bremsstrahlung 1577
1579	(E) THE INTERNAL COMPTON EFFECT by B. G. Pettersson
	§ 1. Introduction 1579
	2. Theory 1579
	3. Experiments 1581
 CHAPTER XXVI	
1583	POSITRON ANNIHILATION AND POSITRONIUM by M. Deutsch and S. Berko
	§ 1. The annihilation process 1583
	2. Positronium physics 1586
	3. Positronium chemistry in gases 1591
	4. Positronium chemistry in condensed materials 1594
	5. Free annihilation and solid state physics 1596

APPENDIX 3

1599	TABLE OF LIFETIME MEASUREMENTS OF EXCITED NUCLEAR STATES by J. Lindskog, T. Sundström and P. Sparrman
------	---

APPENDIX 4

1621 TABLE OF NUCLEAR SPINS AND MOMENTS by I. Lindgren

APPENDIX 5

1639 TABLES OF INTERNAL CONVERSION COEFFICIENTS by L. A. Sliv and I. M. Band

APPENDIX 6

1673 TABLES OF THE CONVERSION MATRIX ELEMENTS AND PHASES by I. M. Band,
M. A. Listengarten and L. A. Sliv

APPENDIX 7

1683 PARTICLE PARAMETERS FOR ANGULAR CORRELATIONS OF CONVERSION
ELECTRONS by I. M. Band, M. A. Listengarten and L. A. Sliv (edited by J. E. Thun)

APPENDIX 8

1687 TABLE OF ANGULAR CORRELATION COEFFICIENTS by M. Ferentz and
N. Rosenzweig (edited by E. Karlsson)

APPENDIX 9

1691 FINITE SOLID ANGLE CORRECTIONS by M. J. L. Yates

1705 AUTHOR INDEX

1731 SUBJECT INDEX
