LIST OF CONTRIBUTORS	xv
INTRODUCTION by K. Siegbahn	xviii

CHAPTER I

INTERACTION OF ELECTRONS WITH MATTER by W. Paul and H. Steinwedel	1
§ 1. Introduction 1 — § 2. Elastic Scattering of Electrons by Atomic Nuclei 1 — § 3. Energy Loss 9	

CHAPTER II

INTERACTION OF γ -RADIATION WITH MATTER by Charlotte M. Davisson	24
§ 1. Introduction 24 — § 2. Photoelectric Effect 26 — § 3. Scattering 32 — § 4. Pair Production 41 — § 5. Total Absorption Coefficients 47 — § 6. Absorption Methods 49	

CHAPTER III

β -RAY-SPECTROMETER THEORY AND DESIGN. HIGH RESOLUTION SPECTROSCOPY by K. Siegbahn	52
§ 1. Introduction. General Discussion of Spectrometers 52 — § 2. Some Basic Relations in β -Spectroscopy 54 — § 3. Nomenclature 56 — § 4. The Semicircular Spectrometer 58 — § 5. The Double Focusing Spectrometer 66 — § 6. Other Flat Spectrometers 73 — § 7. Lens Spectrometers 77 — § 8. Coincidence Spectrometers 86 — § 9. Electrostatic Spectrometers 90 — § 10. Precision Spectroscopy 90	

CHAPTER IV

CRYSTAL DIFFRACTION SPECTROSCOPY OF NUCLEAR γ -RAYS by J. W. M. DuMond	100
§ 1. Early History and Elementary Ideas Relative to Both Flat and Bent Crystal Gamma and X-Ray Spectrometers 100 — § 2. Adaptation of the Transmission Type Bent Crystal Spectrometer Principle to the Precision Measurement of Very Short Wavelengths (Nuclear γ -Rays) 109 — § 3. Typical Results Obtained with the Mark I Crystal Diffraction γ -Ray Spectrometer 123	

CHAPTER V

THE SCINTILLATION METHOD by P. R. Bell	132
§ 1. The Scintillation Counter 133 — § 2. Methods for Various Radiations 133 — § 3. Factors Affecting Resolution 143 — § 4. Crystal Preparation and Mounting 147 — § 5. Crystal Efficiency and Linearity 151 — § 6. Total Absorption Gamma Spectrometers 155 — § 7. Coincidence Spectrometry 159	

CHAPTER VI

PARTICULAR DETECTION METHODS by S. C. Curran, H. Fulbright, G. Bishop and R. Wilson.	165
(I) PROPORTIONAL COUNTER SPECTROMETRY by S. C. Curran	165
§ 1. The Principle of Operation 165 — § 2. The Gas Gain 166 — § 3. The Energy Expenditure per Ion Pair and Calibration 167 — § 4. Statistical Fluctuations in Pulse Size and Resolution 168 — § 5. Pulse Shape and Amplifier Design 172 — § 6. Geometries of Source and Counter, Wall Effect and Magnetic Field 173 — § 7. Photoabsorption, Fluorescence Yield and the Escape Peak 176 — § 8. Pulse Amplitude Analysis 177 — § 9. Coincidences, Internal and External 178 — § 10. Proportional Counter Work at Low Intensity 179 — § 11. Notes on Recent Applications 182	
(II) BETA SPECTROSCOPY BY USE OF A HIGH PRESSURE PROPORTIONAL COUNTER by H. Fulbright	184
§ 1. Introduction and Description of Apparatus 184 — § 2. Analysis of the Operation of the Counter 186 — § 3. Calibration 189 — § 4. Resolving Power Corrections 190 — § 5. Results 191	
(III) SPECIAL METHODS IN GAMMA-RAY SPECTROSCOPY by G. Bishop and R. Wilson	192
§ 1. Photoneutron Threshold Reactions 192 — § 2. Measurement of Photoneutron Energies 193 — § 3. Measurement of Photoproton Energies 194 — § 4. Comparison with Other Methods 197 — § 5. Polarisation of γ -Rays 198 — § 6. Other Reactions 199	

CHAPTER VII

THE COINCIDENCE METHOD by A. C. G. Mitchell	201
§ 1. Introduction 201 — § 2. The Disposition of Apparatus 202 — § 3. General Procedures for Coincidence Counting 204 — § 4. The Calculation of Errors 206 — § 5. Remarks on the Measurement of Beta-Ray Energies by Absorption 208 — § 6. The Measurement of the Energy of γ -Rays by the Absorption of Compton-Electrons 209 — § 7. Analysis of the Coincidence Method 211 — § 8. Measurement of Internal Conversion Electrons 216 — § 9. The Use of Coincidence Counting for Determining the Efficiency of γ -Counters 219 — § 10. Coincidence Counting Using a Magnetic Spectrometer 221 — § 11. Future Developments 223	

CHAPTER VIII

BETA-SPECTROMETER MEASUREMENTS by A. C. G. Mitchell and H. Slätis	224
(I) INVESTIGATIONS OF DISINTEGRATION SCHEMES — ENERGIES AND INTENSITIES OF β - AND γ -COMPONENTS AND THEIR COUPLING by A. C. G. Mitchell	224
§ 1. Introduction 224 — § 2. The Preparation of the Source Material 226 — § 3. The Calibration of Instruments 226 — § 4. The Search for γ -Rays and Measurement of their Energy 228 — § 5. Special Considerations for Complex Spectra 233 — § 6. The Determination of the Relative Intensities of γ -Rays 234 — § 7. The Measurement of β -Rays 236 — § 8. The Fermi Plot; End Points and β -Ray Groups — § 9. Determination of Comparative Half-Lives- <i>ft</i> 245 — § 10. Determination of Internal Conversion Coefficients and <i>K/L</i> Ratios 246 — § 11. Examples of Some Disintegration Schemes 251	
(II) SOURCE AND WINDOW TECHNIQUE by H. Slätis	259
§ 1. Introduction 259 — § 2. Preparation of Foils for Backings and Windows 260 — § 3. Estimation of Foil Thickness 263 — § 4. Preparation of Samples 263 — § 5. Window Absorption Correction 269 — § 6. Acceleration of Electrons 272	

CHAPTER IX

THE THEORY OF ALLOWED β -DECAY by M. E. Rose	273
§ 1. Introduction 273 — § 2. The Role of β -Decay in Nuclear Physics 274 — § 3. The Conservation Laws and the Neutrino 274 — § 4. The β -Interaction 275 — § 5. Allowed Transitions 277 — § 6. The Energy Spectrum 279 — § 7. Kurie Plots for Allowed Spectra 283 — § 8. <i>ft</i> Values 284 — § 9. Orbital Electron Capture 289	

CHAPTER X

THE THEORY OF FORBIDDEN β -DECAY by E. Konopinski	292
§ 1. Introduction 292 — § 2. The Effects Responsible for Forbidden Decays 292 — § 3. General Selection Rules and Matrix Elements 296 — § 4. Spectra and Half-Lives 301 — § 5. The "Unique" Forbidden Transitions 304 — § 6. Once-Forbidden Spectra and Half-Lives 306 — § 7. Twice-Forbidden Spectra and Half-Lives 309 — § 8. The Law of β -Decay 311 — Appendix 312	

CHAPTER XI

EXPERIMENTS ON THE SHAPES OF β -SPECTRA. THE INTERACTION IN β -DECAY by C. S. Wu	314
§ 1. Introduction 314 — § 2. The Allowed Spectra 314 — § 3. Fierz Interference Terms for the Allowed Transitions 319 — § 4. Fermi and Gamow-Teller Interaction 320 — § 5. Rest Mass of the Neutrino 325 — § 6. Forbidden Transitions 327 — § 7. The	

Unique Forbidden Spectra 328 — § 8. Half-Lives of the Unique Transitions 333 — § 9. First Forbidden Spectra 336 — § 10. Spectrum of RaE and Pseudoscalar Interaction 339 — § 11. Effect of Pseudoscalar Interaction on the Shape of Allowed β -Spectra 344 — § 12. Twice Forbidden Spectra 345 — § 13. Mu-Meson Beta Spectrum 349

CHAPTER XII

NEUTRINO RECOIL EXPERIMENTS by O. Kofoed-Hansen. 357
 § 1. Introduction 357 — § 2. Two-Body Decays 357 — § 3. β -Decay 363 — § 4. Difficulties with Bound Mother Particle 366 — § 5. Interpretation of β -Recoil Experiments 367

CHAPTER XIII

THEORY OF MULTIPOLE RADIATION by S. A. Moszkowski. 373
 § 1. Introduction 373 — § 2. The Multipole Radiation Field 376 — § 3. γ -Decay Transition Probabilities of a Single Particle 382 — § 4. Gamma Decay Transition Probabilities for Configurations Consisting of Several Independent Particles 393

CHAPTER XIV

THEORY OF INTERNAL CONVERSION by M. E. Rose 396
 § 1. Introduction 396 — § 2. General Theoretical Considerations 399 — § 3. The Calculations: I 401 — § 4. The Calculations: II 405 — § 5. The Internal Conversion Coefficients 406.

CHAPTER XV

THE SHELL MODEL by J. H. D. Jensen 414
 § 1. General Considerations 414 — § 2. Magic Numbers, or Shell Numbers 415 — § 3. Level Sequence in the Shell Model 417 — § 4. Remarks on Spin-Orbit Coupling 422 — § 5. Parity and Orbital Angular Momentum 423 — § 6. Nuclei with Incompletely Filled Shells 424 — § 7. Pairing Energy and Level Occupation Scheme 427

CHAPTER XVI

NUCLEAR SHELL SYSTEMATICS by M. Goepfert-Mayer, M. Goldhaber and A. W. Sunyar 433
 (I) CLASSIFICATIONS OF β -TRANSITIONS by M. Goepfert-Mayer. 433
 § 1. Introduction 433 — § 2. Nuclei of Odd A 433 — § 3. Nuclei with Even A 447 — § 4. Light Nuclei 452
 (II) CLASSIFICATION OF NUCLEAR ISOMERS by M. Goldhaber and A. W. Sunyar 453
 § 1. Introduction 453 — § 2. Selection Rules 454 — § 3. Experimental Procedures 456 — § 4. Some General Experimental Results 461

CHAPTER XVII

COLLECTIVE NUCLEAR MOTION AND THE UNIFIED MODEL by A. Bohr and B. R. Mottelson	468
§ 1. Collective Oscillations of a Shell Structure 468 — § 2. Nuclear Coupling Scheme 470 — § 3. Spins and Moments 475 — § 4. Nuclear Transition Probabilities 477 — § 5. Systematics of Nuclear Rota- tional Structure 483	

CHAPTER XVIII

MEASUREMENT OF SHORT LIFETIMES OF EXCITED STATES by R. E. Bell and K. G. Malmfors	494
(I) MEASUREMENT BY DELAYED COINCIDENCES. COMPARISON METHODS by R. E. Bell	494
§ 1. Introduction 494 — § 2. Fast Coincidence Techniques 496 — § 3. The Delayed Coincidence Method 505 — § 4. The Shortest Life- times by Delayed Coincidence Methods 507 — § 5. Examples of Comparison Methods for Lifetime Measurement 516	
(II) RESONANT SCATTERING OF γ -RAYS by K. G. Malmfors.	521
§ 1. Resonant Scattering Experiments 521 — § 2. Competing Non-Resonant Scattering Processes 528	

CHAPTER XIX

ANGULAR DISTRIBUTION OF NUCLEAR RADIATION by H. Frauen- felder, R. J. Blin-Stoyle, M. A. Grace and H. Halban, S. R. de Groot and H. A. Tolhoek	531
(I) ANGULAR CORRELATION by H. Frauenfelder	531
§ 1. Introduction 531 — Part A. Free Nuclei 534 — § 2. Naive Theory of γ - γ Directional Correlation in Free Nuclei 534 — § 3. General Theory of Angular Correlation 539 — § 4. γ - γ Directional Correlation 549 — § 5. Polarization Correlation 559 — § 6. Direc- tional Correlation Involving Conversion Electrons 561 — § 7. α - γ Directional Correlation 564 — § 8. β - γ Directional Correlation 568 — Part B. The Influence of Extranuclear Fields 572 — § 9. Survey 572 — § 10. The Determination of Nuclear g -Factors 576 — § 11. The Determination of the Quadrupole Coupling 581 — § 12. Time- Dependent Interactions 588 — § 13. The Influence of K -Capture 591 — § 14. The Determination of the True Correlation 595 — Part C. Experimental Methods 596 — § 15. The Treatment of Experimental Data 596	
(II) EXPERIMENTS WITH ORIENTED NUCLEI by R. J. Blin-Stoyle, M. A. Grace and H. Halban	600
§ 1. Introduction 600 — § 2. Production of Oriented Nuclei 600 — § 3. Properties and Detection of Oriented Nuclei 604 — § 4. Angular Distribution and Polarization of Radiation 604 — § 5. Experimental Results with Oriented Nuclei 607 — § 6. Conclusions 611	

(III) THEORY OF ANGULAR EFFECTS OF RADIATIONS FROM ORIENTED NUCLEI by S. R. De Groot and H. A. Tolhoek . . .	613
§ 1. Introduction 613 — § 2. Orientation of Nuclei 613 — § 3. The Angular Distribution of Nuclear Radiation 614 — § 4. The Directional Distribution of Gamma Radiation 616 — § 5. Polarization Distribution of Gamma Radiation 617 — § 6. The Influence of Transitions Preceding the Gamma Radiation 619 — § 7. The Directional Distribution and Polarization of Beta Radiation 621 — § 8. Other Topics 623	

CHAPTER XX

SOME INTERNAL EFFECTS IN NUCLEAR DECAY by I. Bergström, R. Wilson and C. S. Wu	624
(I) AUGER ELECTRONS EMITTED FROM RADIOACTIVE ATOMS by I. Bergström	624
§ 1. Introduction 624 — § 2. Classification of Auger Electrons 625 — § 3. Energies of Auger Electrons 626 — § 4. Intensities of Auger Electrons 628 — § 5. Applications Depending on the Fluorescence Yield 634	
(II) INTERNAL PAIR FORMATION by R. Wilson.	636
§ 1. Introduction 636 — § 2. Theoretical Predictions 636 — § 3. Exact Calculations 638 — § 4. Schrödinger Approximation 639 — § 5. Summary of Theoretical Predictions 640 — § 6. Magnetic Spectrometer 641 — § 7. Detection by Annihilation Radiation 644 — § 8. Counter Telescopes 646 — § 9. Cloud Chamber Measurements 647 — § 10. Internal Pair Formation at high Energies 647 — § 11. Summary 648	
(III) INTERNAL BREMSSTRAHLUNG by C. S. Wu	649
§ 1. Introduction 649 — § 2. Energy Distribution of Internal Bremsstrahlung 650 — § 3. Experimental Results 653 — § 4. Angular Distribution of Internal Bremsstrahlung 655 — § 5. Bremsstrahlung Due to Electron Capture Process 656	

CHAPTER XXI

PARTICULAR PROBLEMS STUDIED WITH SCINTILLATION TECHNIQUES by P. E. Cavanagh, H. Fulbright, S. De Benedetti, R. E. Bell and M. Deutsch	660
(I) ORDINARY COMPTON EFFECT AND DOUBLE COMPTON EFFECT by P. E. Cavanagh	660
§ 1. Ordinary Compton Effect 660 — § 2. The Double Compton Effect 665	
(II) USE OF A SCINTILLATION COUNTER SPECTROMETER IN A SEARCH FOR DOUBLE BETA DECAY by H. Fulbright.	668
§ 1. Introduction 668 — § 2. The Experimental Method 669 — § 3. Results 672	

(III) ANNIHILATION OF POSITRONS by S. De Benedetti	672
§ 1. Introduction 672 — § 2. Two-Quanta Polarization 674 — § 3. The Momentum of the Annihilating Pairs 675 — § 4. Three- Quantum Annihilation 677	
(IV) ANNIHILATION OF POSITRONS IN LIQUIDS AND SOLIDS by R. E. Bell	680
(V) POSITRONIUM by M. Deutsch	689

CHAPTER XXII

ILLUSTRATIVE DISINTEGRATION STUDIES by R. E. Bell, D. E. Alburger, A. C. G. Mitchell and P. Preiswerk	696
(I) DISINTEGRATION OF I^{131} by R. E. Bell	696
(II) ENERGY LEVELS OF Pb^{206} FROM THE DECAY OF Bi^{206} by D. E. Alburger	707
(III) A STUDY OF THE SEQUENCE $I^{130} \rightarrow Xe^{130} \leftarrow Cs^{130} \rightarrow Ba^{130}$ AND THE LEVELS OF Xe^{130} by A. C. G. Mitchell	720
§ 1. Experiments on I^{130} 720 — § 2. The Disintegration of Cs^{130} 728	
(IV) DISCUSSION OF THE SCHEME OF RADIOACTIVE DECAYS LEADING TO Cd^{111} by P. Preiswerk.	730
§ 1. Summary of Measurements 730 — § 2. Interpretation 735	

CHAPTER XXIII

BETA AND GAMMA DISINTEGRATION OF SOME HEAVY RADIO- ELEMENTS ($Z > 80$) by N. Feather	740
§ 1. Active Species of the $A = 4n$ and $A = 4n + 2$ Series 740 — § 2. Active Species of the $A = 4n + 1$ and $A = 4n + 3$ Series 756 — § 3. Characteristics of the Capture-Active Species of Large Z 760 — § 4. Miscellaneous: Series Branching; Isomerism 762	

CHAPTER XXIV

GAMMA RADIATION FROM CHARGED PARTICLE REACTIONS by D. E. Alburger	767
§ 1. Introduction 767 — § 2. Gamma Radiation from Charged Particle Bombardment 768 — § 3. Energy and Intensity Measure- ments 773 — § 4. Particle Gamma Coincidence and Angular Corre- lations 787 — § 5. The Life times of Nuclear States 789 — § 6. Future Developments 791	

CHAPTER XXV

NEUTRON CAPTURE GAMMA RAYS by B. B. Kinsey	795
§ 1. Introduction 795 — § 2. Experimental Methods 795 — § 3. Experimental Results 799 — § 4. Interpretation of Gamma-Ray	

Intensities 811 — § 5. Intensities and Transition Probabilities of Different Multipole Orders 813 — § 6. Absolute Emission Probabilities 815 — § 7. Total Radiation Widths 819

CHAPTER XXVI

MEASUREMENT OF DISINTEGRATION RATE by J. L. Putman . . .	823
§ 1. Introduction 823 — § 2. Types of Counters 825 — § 3. Counting Methods 827 — § 4. Calorimetric Methods 847 — § 5. Measurement of Charge Lost by a Source 849 — § 6. Use of Ionization Chambers 850	
APPENDIX I. GAMMA-RAY ABSORPTION COEFFICIENTS by Ch. M. Davisson	857
APPENDIX II. FERMI FUNCTIONS by M. E. Rose	875
APPENDIX III. FORBIDDEN SHAPE FACTORS by M. E. Rose	884
APPENDIX IV. INTERNAL CONVERSION COEFFICIENTS by M. E. Rose	905
APPENDIX V. ANGULAR CORRELATIONS by H. Frauenfelder	910
APPENDIX VI. ABSORPTION ENERGIES by R. D. Hill	914
APPENDIX VII. Th(B+C+C'') SPECTRUM by K. Siegbahn and T. R. Gerholm	920
APPENDIX VIII. Bq vs keV by T. R. Gerholm	926
AUTHOR INDEX	933
SUBJECT INDEX	946
