Editor's Note	iv
Peter G. O. FREUND	
Universality and Symmetry Principles in Hadron Physics	
1. Introduction	1
1) A minimal goal for a theory of strong interactions.	1
2. Universality Principles	2
2) Universal vector meson couplings.	2
3) Universal pseudoscalar and axial vector couplings	3
4) Universal tensor and scalar meson couplings	4
5) Reggeized Universality	4
3. Symmetries of Strong Interactions	6
6) The $U(6) \times U(6) \times O(3)_L$ rest symmetry and its supermultiplets.	6
7) The Collinear $U(6)_W \times O(2)_{L_z}$ group. The Kineton Method	8
8) Predictions of $U(6)_W \times O(2)_{L_z}$ Symmetry	10
4. Simultaneous use of Symmetry and Universality Principles	12
9) Relation between Universality and Symmetries	12
10) Formulation of Universality for $U(6) \times U(6) \times O(3)$ Multiplets	14
11) Consequences of $U(6) \times U(6) \times O(3)$ and Universality	15
12) Conclusions	21
References	22
Yoshio YAMAGUCHI	
Chiral Dynamics	
Introduction and Summary	24
1. Chiral $SU_2 \times SU_2$ dynamics	24
1) A chiral description for pseudoscalar mesons	24
2) Chiral description of nucleons.	29
3) Chiral invariant theory of meson-nucleon system	31
4) Matrix formalism	33
2. Chiral $U_3 \times U_3$ Theory	35
5) Representation and transformation of pseudoscalar mesons	35
6) Transformation property for quarks	38
7) Strong dynamics including chiral gauge fields	39
References	41
S. M. BERMAN	
Soft Pions and Current Algebras	
1. Comment	43
2. Introduction	43
1) Reduction Formula	43
2) The Goldberger-Treiman Relation	44
3. Charges, Noether Theorem	48
1) Charges	48

2) Noether Theorem	49
4. Applications	51
1) Kroll-Ruderman Theorem	51
2) The Callan-Treiman Relation	55
3) The K_{e_4} Decays	58
Appendix 1.	
Complete Proof of the Divergence Conditions and the Noether Theorem	62
Appendix 2.	
Remarks on Isospin Generators and Cabibbo Theory	66
Gell-Mann, Ne'eman Remark on the Cabibbo Theory	66
Appendix 3.	
Low-Energy Theorem for Pion Photoproduction from the PCAC Hypothesis	68
1. Introduction	68
2. The Low-Energy Theorem	68
3. Comparison with Experimental Results	71
4. Conclusion	73
T. D. LEE	
Algebra of the Observed Current Operators	
1. Review	74
1) Introduction	74
2) Current Algebra	75
3) Spectral Representation and the Schwinger Term	76
2. Field-Current Identity	80
1) General Discussion	80
2) Algebra of Fields	80
3) Propagator	82
3. Application to $(J_{\mu}^T)_{I=1}$	84
1) Spectral Function	84
2) Lagrangian	85
3) Feynman Graphs and ρ -propagator	87
4) Commutation Relations and Sum Rules	89
5) Photon Propagator	90
6) Remarks	91
7) Form Factor	93
8) Algebra of $(J_{\mu}^T)_{I=1}$	94
4. Iso-scalar Electromagnetic Current	94
1) General Discussions	94
2) ϕ - ω Mixing	96
3) Special Models	98
5. Algebra of the Observed Currents	99
1) U_1 Algebra	99
2) SU_2 Algebra	100
References	101

T. D. LEE

C, P, T Symmetries

1. General Discussion	102
1) Symmetry Principles and Their Violations	102
2) Time Reversal Symmetry	103
3) Implication of Non-conservation	104
4) Group Extension	105
2. Possible Existence of C_{st} and T_{st} Violating Electromagnetic Interaction	107
1) General Discussion	107
2) Some Necessary Properties of K_μ	108
3) Classification	110
4) Some Further Properties of Q_K	111
5) Experimental Consequences of K_μ	113
6) Application of Field Current Identity	114
References	115

K. NISHIJIMA

A Model of *CP* Violation

1. Introduction	116
2. The Primary Interaction	117
3. The Selection Rule $ \Delta S < 2$ and New Constraints	118
4. The <i>S</i> Wave Hyperon Decays	123
5. The <i>CP</i> -Violating Decay $K_L^0 \rightarrow 2\pi$	127
6. The Electric Dipole Moment of the Neutron	129
References	131

M. GOURDIN

TCP Invariance, Time-reversal Invariance, and *K*-meson Decay

1. Introduction	132
2. Quantum Mechanics	133
3. The <i>TCP</i> Invariance	135
4. Time-reversal Invariance	138
5. The 2π -meson Mode	139
6. The 3π -meson Mode	150
7. Conclusion	154
References	154
Figure Captions	156

N. NAKANISHI

Daughter trajectories and Bethe-Salpeter ghosts	161
