ACKNOWLEDGMENTS . . . . .	v
GLOSSARY OF SYMBOLS AND UNITS . . . . .	vii

## I. Introduction

A. Importance of the Fundamental Physical Constants . . . . .	1
B. Justification for a New Least-Squares Adjustment at This Time . . . . .	2
C. Significance of the Output Values of a Least-Squares Adjustment of the Constants . . . . .	6
D. Outline of Paper . . . . .	8

## II. Review of Experimental Data

### A. Introduction

1. Auxiliary Constants, Stochastic Input Data, and Adjustable Constants . . . . .	11
2. Conversion Factors as Adjustable Constants . . . . .	12
3. Form of the Operational Equations Used in the Adjustments . . . . .	14
4. Treatment of Error . . . . .	18

### B. Auxiliary Constants

1. Comparisons of As-Maintained Electrical Units . . . . .	21
2. Velocity of Light, $c$ . . . . .	26
3. Ratio of the Absolute Ohm to the NBS Ohm, $\Omega_{\text{ABS}}/\Omega_{\text{NBS}}$ . . . . .	32
4. Acceleration Due to Gravity, $g$ . . . . .	35
5. Magnetic Moment of the Electron in Units of the Bohr Magneton, $\mu_e/\mu_B$ . . . . .	47

## CONTENTS

6. Magnetic Moment of the Proton in Units of the Bohr Magnetron, $\mu_p/\mu_B$ . . . . .	50
7. Atomic Masses and Mass Ratios . . . . .	56
8. Rydberg Constant for Infinite Mass, $R_\infty$ . . . . .	58
9. Summary of the Auxiliary Constants . . . . .	67
<b>C. Stochastic Input Data</b>	
1. Josephson-Effect Value of $e/h$ . . . . .	68
2. Ratio of the NBS Ampere to the Absolute Ampere, $K \equiv A_{\text{NBS}}/A_{\text{ABS}}$ . . . . .	71
3. Faraday Constant, $F$ . . . . .	77
4. Gyromagnetic Ratio of the Proton, $\gamma_p$ . . . . .	85
5. Magnetic Moment of the Proton in Units of the Nuclear Magnetron, $\mu_p/\mu_n$ . . . . .	112
6. X-Ray Experiments . . . . .	129
(a) Measurements of $hc/e$ . . . . .	132
(b) Measurements of $N$ . . . . .	135
(c) Measurements of $A$ . . . . .	138
(d) Measurements of $\lambda_C$ . . . . .	140
7. Summary of the Stochastic Input Data . . . . .	142
<b>III. Least-Squares Adjustment to Obtain Values of the Constants Without QED Theory</b>	
<b>A. Preliminary Search for Discrepant Data</b>	
1. Inconsistencies among Data of the Same Kind . . . . .	153
2. Inconsistencies among Dissimilar Data . . . . .	156
<b>B. Least-Squares Search for Discrepant Data</b>	
1. Summary of Least-Squares Procedure . . . . .	165
2. Analysis of Variance . . . . .	169
<b>C. Final Adjustment to Obtain Best Values of the Constants Without QED Theory . . . . .</b>	
	180
<b>IV. Implications for Quantum Electrodynamics</b>	
<b>A. <math>g</math> Factors</b>	
1. Free Electron and Positron . . . . .	195
2. Free Muon . . . . .	201

<b>B. Ground-State Hyperfine Splittings</b>	
1. Atomic Hydrogen . . . . .	211
2. Muonium . . . . .	217
3. Positronium . . . . .	226
<b>C. Fine Structure of Hydrogenic Atoms</b>	
1. Lamb Shift in H and D, $n = 2$ . . . . .	227
2. Fine Structure Splitting in H and D, $n = 2$ . . . . .	243
3. Other Fine Structure Measurements . . . . .	260
<b>D. Comparison of Experimental Data via the Fine     Structure Constant . . . . .</b>	<b>263</b>
<b>V. Final Recommended Set of Fundamental Constants</b>	
A. Selection of Input Data . . . . .	275
B. Final Adjustment and Recommended Constants . . . . .	291
<b>VI. Summary and Conclusions</b>	
A. Conclusions Concerning Quantum Electro- dynamics . . . . .	299
B. Conclusions Concerning Superconductivity . . . . .	307
C. Weaknesses in the Present Adjustment, and Future Work . . . . .	309
D. Further Fundamental-Constant Experiments Utilizing Macroscopic Quantum Phase Coherence in Superfluids . . . . .	312
E. Recommendation for Reporting Results . . . . .	319
<b>VII. Notes Added in Proof . . . . .</b>	<b>323</b>
<b>APPENDIX</b>	
Variance-Covariance Matrices . . . . .	337
<b>REFERENCES . . . . .</b>	<b>343</b>
