

TABLE OF CONTENTS

Preface	v
PART ONE. SLOW-NEUTRON SCATTERING	
Chapter I. Production and Detection of Slow Neutrons	1
§ 1. Neutron sources	1
§ 2. Slow- neutron detectors	9
Chapter II. Basic Theory of the Interaction of Slow Neutrons with Matter	15
§ 1. Scattering by a fixed nucleus without spin	15
§ 2. Scattering by a fixed nucleus with spin. Spin incoherence . .	20
§ 3. Scattering by a free nucleus. Scattering by an ideal gas . . .	26
§ 4. The Fermi Quasi- Potential	35
§ 5. Isotopic incoherence	40
§ 6. Scattering by an isotropic oscillator	43
Chapter III. Coherent Elastic Scattering of Slow Neutrons	51
§ 1. Diffraction from a single crystal	51
§ 2. Scattering from polycrystals	59
§ 3. Refraction and reflection of neutrons	62
Chapter IV. Slow- Neutron Spectrometry. Measurement of Scattering Cross Sections and Amplitudes	65
§ 1. Crystal spectrometer	65
§ 2. Selection by time of flight	68
§ 3. Polycrystalline filters	85
§ 4. Measurement of scattering cross sections and amplitudes . .	89
Chapter V. General Problems of the Theory	94
§ 1. The Van Hove theory	94
§ 2. The static approximation and elastic scattering	104
§ 3. The incoherent approximation	106
§ 4. Arbitrary scattering systems	108
§ 5. The detailed balance condition. The dispersion relation . . .	110
§ 6. Short scattering times	112
§ 7. The semiclassical approximation	126
Chapter VI. Scattering of Slow Neutrons by Crystals	129
§ 1. The dynamics of atoms in crystals	129
§ 2. Elastic scattering	136
§ 3. One- phonon scattering	141
§ 4. Multi- phonon scattering	154

§ 5.	The incoherent approximation	156
§ 6.	Correlation functions for crystals	175
§ 7.	The Gaussian approximation for multi- phonon scattering	181
Chapter VII.	Slow Neutron Scattering in Gases and Liquids	182
§ 1.	Neutron scattering in parahydrogen and orthohydrogen	182
§ 2.	The General Theory of scattering by molecules	187
§ 3.	The mass-tensor approximation	192
§ 4.	Neutron scattering in liquids	196
Chapter VIII.	Magnetic Neutron Scattering	210
§ 1.	Magnetic interaction	210
§ 2.	Neutron scattering by magnetic materials	213
§ 3.	Polarized neutrons.	217
PART TWO. THERMALIZATION AND DIFFUSION OF NEUTRONS		
Chapter IX.	Kinetic Equation for Neutrons	220
§ 1.	Derivation of the kinetic equation	220
§ 2.	The P_1 approximation	221
§ 3.	The diffusion approximation	225
§ 4.	Moderation of neutrons. Age- theory approximation.	232
Chapter X.	Stationary Neutron Distribution	241
§ 1.	Thermalization in an infinite medium	241
§ 2.	Thermalization in an infinite medium. Epithermal energy range	244
§ 3.	Thermalization in an infinite medium. Gas model	250
§ 4.	Diffusion and its effects on the spectrum	256
§ 5.	Comparison of theory with experiment. Effect of the chemical bond	260
§ 6.	Use of experimental scattering law data to calculate neutron spectra	275
Chapter XI.	Nonstationary Neutron Distribution	283
§ 1.	Thermalization in an infinite medium	283
§ 2.	Diffusion and its effect on the spectrum	287
§ 3.	Experimental study of nonstationary diffusion	291
Appendices 1—4		297
