

CONTENTS

INTRODUCTION	1
------------------------	---

CHAPTER 1

MATHEMATICAL DATA

1. FOUR-PLACE LOGARITHMS	2
2. POWERS OF TEN	4
3. POWERS OF TWO	6
4. CUBE ROOTS	8
5. THE LEAST-SQUARES METHOD	10
6. QUADRATIC INTERPOLATION	17
Table 1.51 The Gaussian distribution and its integral	15
Fig. 1.51 Probability that χ^2 exceeds a given number	16

CHAPTER 2

ATOMIC CONSTANTS

ATOMIC CONSTANTS	18
----------------------------	----

CHAPTER 3

ELEMENTS AND ISOTOPES

1. NAMES OF THE ELEMENTS	21
2. TRADITIONAL NAMES OF NATURAL RADIOACTIVE SUBSTANCES	22
3. ISOTOPES AND ATOMIC WEIGHTS	23

CHAPTER 4

HEAVY PARTICLES

1. ABSORPTION OF HEAVY PARTICLES	26
2. MAGNETIC RIGIDITY VERSUS ENERGY FOR HEAVY PARTICLES	31
3. ALPHA DISINTEGRATION HALF-LIVES	37
4. SPONTANEOUS FISSION HALF-LIVES	38
Fig. 4.12 Range straggling of protons in air	27

CHAPTER 5

ELECTRONS

1. ABSORPTION AND BACKSCATTERING OF ELECTRONS	40
2. MAGNETIC RIGIDITY VERSUS ENERGY FOR ELECTRONS	31, 42
3. SHAPES OF CONTINUOUS BETA SPECTRA	42
4. TRANSITION PROBABILITIES AND REDUCED HALF-LIVES	58
Table 5.32, 34 Reduced Fermi functions	46-47; 52-53
Table 5.33, 35 Beta decay functions L_0 , L_1 , L_2 , M_1 and M_2	48-50; 54-56
Fig. 5.31, 32 Screening corrections	51; 57

Table 5.41 Constants for computing capture ratios	61
Fig. 5.41-44 Graphs for determining log ft values	62-64
Table 5.42, Fig. 5.45 K capture to positon emission ratios	64-65

CHAPTER 6

GAMMA RAYS

1. ABSORPTION OF PHOTONS	66
2. ENERGY OF SCATTERED GAMMA RAYS	70
3. GAMMA DECAY HALF-LIVES	71
4. INTERNAL CONVERSION	75
Fig. 6.31-33 Graphs for determining gamma ray half-lives	72-74

CHAPTER 7

X-RAYS AND AUGER ELECTRONS

1. ELECTRON BINDING ENERGIES	76
2. INTENSITY RATIO OF K X-RAY COMPONENTS	80, 81
3. FLUORESCENT YIELD IN THE K SHELL	81, 82
4. K AUGER ELECTRONS	83
5. THE L SHELLS	85
6. SLATER SCREENING CONSTANTS	88
Table 7.2-3 Relative intensities of K X-ray components, fluorescent yield in the K shell and average K X-ray binding energies	81
Fig. 7.41 Ratios of intensities of the KLL, KLY and KXY Auger groups	84
Fig. 7.51 Fluorescent yields and Coster-Kronig yields in the L subshells	87
Fig. 7.52 Numbers of holes in the L shells caused by a hole in the K shell	87

CHAPTER 8

ANGULAR DISTRIBUTIONS AND CORRELATIONS

1. ANGULAR DISTRIBUTIONS	89
2. ANGULAR CORRELATIONS	90
3. PHOTONS	91
4. ALPHA RAYS	91
5. BETA RAYS	92
6. K CONVERSION ELECTRONS	94
7. EMISSION OR ABSORPTION OF NUCLEAR PARTICLES	94
8. LONGITUDINAL POLARIZATION OF BETA RAYS	95
9. TABLES OF F COEFFICIENTS	95
Table 8.11-12 F coefficients for even ν	96-103
Table 8.51 F coefficients for odd ν	104

CHAPTER 9

NUCLEAR MODELS

1. ATOMIC MASSES OF NUCLIDES	107
2. NUCLEAR SHELL MODEL	108
3. THE COLLECTIVE MODEL	113
4. MAGNETIC MOMENTS AND QUADRUPOLE MOMENTS	114
5. GAMMA AND BETA DECAY PROBABILITIES	116
6. COULOMB EXCITATION	120
7. CLEBSCH-GORDAN COEFFICIENTS	121

Table 9.21–22 Directly measured ground-state spins of nuclei	109, 112
Fig. 9.21–22 Nilsson diagrams	110–111
Table 9.52 Asymptotic selection rules	119

CHAPTER 10

CALIBRATION STANDARDS

1. GAMMA AND ELECTRON LINE ENERGIES	126
2. HEAVY PARTICLE ENERGIES	128
3. GAMMA RAY INTENSITY MEASUREMENTS	129
Fig. 10.33 Ratio of escape peak to photo peak in scintillation spectra	130
Fig. 10.34 Absorption coefficients of gamma rays in NaI(Tl)	131
