

CONTENTS

| | |
|------------------------|-----|
| Preface | vii |
| Introduction | 1 |

CHAPTER I

VECTOR SPACES AND LINEAR OPERATORS

| | |
|---|----|
| 1. Vector spaces. Hilbert spaces | 7 |
| 2. Linear operators. Matrices | 14 |
| 3. Eigenvectors and eigenvalues. Diagonalization of square matrices | 21 |

CHAPTER II

GROUPS AND GROUP REPRESENTATIONS

| | |
|---|-----|
| 4. Elements of abstract group theory | 24 |
| 5. Group representations | 32 |
| 6. Some properties of irreducible unitary representations | 36 |
| 7. Direct products of representations | 40 |
| 8. Transformation of operators. Irreducible operator sets | 43 |
| 9. Orthogonality of irreducible vector sets and Wigner–Eckart theorem | 45 |
| 10. Lie groups and their representations | 47 |
| 11. The rotation group R_3 | 57 |
| 12. Irreducible representations of the rotation group R_3 | 62 |
| 13. The Lorentz and Poincaré groups | 74 |
| 14. Irreducible unitary representations of the Poincaré group | 80 |
| 15. Representations of semisimple Lie groups. The group SU_3 | 86 |
| 16. The permutation group | 105 |

CHAPTER III

GENERAL PRINCIPLES OF THE RELATIVISTIC THEORY OF REACTIONS

| | |
|--|-----|
| 17. General principles of quantum physics | 116 |
| 18. Invariance principles and group theory | 124 |
| 19. Survey of main invariance principles, conservation laws and good quantum numbers | 130 |
| 20. Collision phenomena. Reactions | 141 |
| 21. Elementary systems and elementary particles | 147 |
| 22. Field aspects. Strong, electromagnetic and weak interactions | 154 |
| 23. Isospin, G -parity and strangeness | 166 |
| 24. The SU_3 symmetry of the strongest interactions | 176 |
| 25. Basic properties of the S matrix | 190 |
| 26. The density matrix | 198 |
| 27. Main problems of the quantum theory of reactions | 205 |

CHAPTER IV

DESCRIPTION OF FREE PARTICLE STATES

| | |
|---|-----|
| 28. One-particle states | 212 |
| 29. Two-particle states | 221 |
| 30. Multiparticle states | 234 |
| 31. Phase space arguments and Dalitz-Fabri plots for three-particle systems | 251 |
| 32. Polarization and alignment of particles | 264 |
| 33. C , G and isospin eigenstates | 272 |
| 34. "Partially localized" multiparticle states | 280 |

CHAPTER V

TRANSITION AMPLITUDES, CROSS SECTIONS AND THEIR PARTIAL WAVE EXPANSIONS

| | |
|---|-----|
| 35. Partial wave expansions of the S matrix elements | 291 |
| 36. Basic properties of the submatrices S_J . Binary reactions | 301 |
| 37. Basic properties of the submatrices S_J . Multiparticle reactions | 308 |
| 38. Cross sections of binary reactions | 312 |
| 39. Classification of binary reactions. Examples of simple types | 325 |
| 40. Cross sections of multiparticle reactions | 334 |
| 41. Decays | 339 |
| 42. Relativistic kinematics | 342 |

CHAPTER VI

SELECTION RULES

| | |
|--|-----|
| 43. General remarks about selection rules | 350 |
| 44. Fast and electromagnetic binary decays | 356 |
| 45. Fast and electromagnetic multiparticle decays | 369 |
| 46. Slow binary decays | 380 |
| 47. Slow three-particle decays and the universal current-current interaction | 386 |
| 48. Decays of neutral K -mesons | 392 |
| 49. Fast and electromagnetic binary reactions | 398 |
| 50. Fast and electromagnetic multiparticle reactions | 404 |

CHAPTER VII

RELATIONS BETWEEN DIFFERENT REACTIONS

| | |
|---|-----|
| 51. Relations implied by the \mathcal{I} , \mathcal{CP} , \mathcal{TCP} and C -invariance | 411 |
| 52. Reciprocity theorem and its applications | 416 |
| 53. Polarization tests for the C , \mathcal{CP} , \mathcal{T} and \mathcal{TCP} -invariance | 419 |
| 54. Relations implied by the \mathbf{I} -invariance | 424 |
| 55. The rule $ \Delta I = \frac{1}{2}$ for slow strangeness changing decays | 432 |
| 56. SU_3 symmetry in fast reactions | 437 |
| 57. Other relations between slow processes | 450 |
| Index | 458 |
