	Pages
<b>M. L. GOLDBERGER</b> <b>INTRODUCTION TO THE THEORY AND AP- PLICATIONS OF DISPERSION RELATIONS</b>	15
I. Historical Background and Non-Relativistic Theory.....	17
1) Historical Background .....	17
2) Heuristic Considerations .....	21
3) Non-Relativistic Theory .....	27
II. Two-Dimensional Representation .....	55
III. Dispersion Relations in Relativistic Field Theory .....	79
A. Reduction Formula .....	79
1) The Asymptotic Condition and the Reduction Formulae .	79
B. Dispersion Relations .....	91
1) The Scalar Vertex Function .....	91
2) Dispersion Relations for Forward Scattering .....	107
IV. Applications of Dispersion Relations to Pion-Nucleon Scattering..	116
V. Applications of the Forward Scattering Dispersion Relations and Introduction to Dispersion Relations for Non-Forward Scattering .....	140
1) Forward Scattering Dispersion Relations .....	140
2) Dispersion Relations for Non-Forward Scattering .....	147
3) Application of Non-Forward Dispersion Relations .....	151
 <b>A. S. WIGHTMAN</b> <b>L'INVARIANCE DANS LA MECANIQUE                           QUANTIQUE RELATIVISTE</b>	 159
I. Les groupes de Lorentz et de Poincaré .....	161

V. Relations de dispersion pour le vertex .....	361
VI. Relations de dispersion pour les réactions à deux particules	370
Bibliographie .....	384

A.O.G. KÄLLEN      PROPERTIES OF VACUUM EXPECTATION  
VALUES OF FIELD OPERATORS

I. The Field Concept .....	389
II. The Particle Concept .....	393
III. General Physical Assumptions .....	399
IV. Reduction Formulae .....	403
V. The Two-Point Function .....	410
VI. The Three-Point Function .....	418
VII. An Integral Representation for the Three-Point Function...	434
VIII. Some Properties of the n-Point Function .....	440
IX. Some Properties of the Analyticity Domain of the Four-Point Function .....	447

G.F. CHEW      DOUBLE DISPERSION RELATIONS AND  
UNITARITY AS THE BASIS FOR A DYNA-  
MICAL THEORY OF STRONG INTER-  
ACTIONS

I. Introduction .....	457
II. The Lorentz-Invariant Amplitude and the Substitution Law .	462
III. The Mandelstam Representation .....	466
IV. Generalization to Include Charge and Spin .....	471
V. Physical Interpretation of Singularities .....	473
VI. Partial-Wave Amplitudes .....	475
VII. Determination of a Partial-Wave Amplitude from Its Un- physical Singularities .....	478
VIII. Asymptotic Behavior of Partial-Wave Amplitudes and Fund- amental Interaction Constants .....	484

Relations de dispersion et particules élémentaires

IX. Pion-Pion Scattering : General Formulation .....	487
X. S-Dominant Solutions of the $\pi - \pi$ Problem .....	494
XI. P-Dominant Solutions of the $\pi - \pi$ Problem .....	495
XII. The Vertex Function of One Variable : Pion Electromagnetic Structure as an Example .....	498
XIII. The Processes $\pi + N \leftrightarrow \pi + N$ and $\pi + \pi \leftrightarrow N + \bar{N}$ .....	503
XIV. Nucleon Electromagnetic Structure .....	509
XV. Conclusion .....	512
References .....	512

S.B. TREIMAN                      THE WEAK INTERACTIONS                      515

I. Introduction .....	517
1) The Strangeness Scheme .....	519
2) C, P, T Symmetries .....	521
3) Classification of Weak Reactions .....	526
II. Leptonic Reactions .....	527
1) Two-Component Theory of the Neutrino .....	527
2) $\mu$ -Meson Decay .....	531
3) Lepton Conservation .....	535
4) Characterization of $\Delta S = 0$ Leptonic Couplings .....	536
5) Beta Decay .....	542
6) Conserved Vector Current Theory .....	547
7) Electron, $\mu$ -Meson Universality .....	552
8) $\mu$ -Meson Capture .....	554
9) Interim Summary .....	560
10) $\Delta S \neq 0$ Leptonic Processes .....	561
11) Decay of Neutral K Particles .....	565
III. Non-Leptonic Weak Reactions .....	568
IV. Universal Models .....	577
Appendix .....	589
References .....	593
Table 1 .....	597
Table 2 .....	598

Y. YAMAGUCHI	STRONG INTERACTIONS OF STRANGE PARTICLES	599
a)	Isospin, Strangeness and Isosymmetry Properties .....	601
	1) Introduction .....	601
	2) Isospin and Strangeness - Gell-Man - Nishijima Scheme ..	603
	3) Charge Independence - Elementary Discussion .....	607
	4) Formulation of Strong Interactions .....	612
	5) Elementary Consequences of High Symmetry Hypothesis ..	623
	6) Violation of Charge Independence and Electromagnetic Interactions .....	628
b)	Spin-Parity .....	632
	1) Determination of Spin .....	632
	2) Parity of the Particles .....	636
	3) Parity Determination .....	637
c)	Phenomenologies - Mostly K - N and $\bar{K}$ - N Collisions .....	645
	1) Neutral K-Complex .....	645
	2) Stark Effect in ( $K^- p$ ) Atoms .....	647
	3) $K^- - N$ and $\bar{K} - N$ Scattering, Effective Range Theory .....	649
	4) $\bar{K} - N$ Scattering with $m_{K^-} \neq m_{\bar{K}^0}$ .....	652
	5) Further Comments on KN Reactions .....	656
d)	Application of Dispersion Theory .....	660
	1) Poleology - Determination of Relative Parity and Coupling Constants .....	660
	2) Application of Forward K - N Dispersion Relations .....	664
