

## CONTENTS

FOREWORD . . . . .	xi
PREFACE . . . . .	xiii
ACKNOWLEDGMENTS . . . . .	xv
PLATES . . . . .	xvii
CHAPTER 1. INTRODUCTION . . . . .	1
PART 1. GENERAL PRINCIPLES	
CHAPTER 2. ORIGIN AND INTERPRETATION OF SPECTRA . . . . .	7
2-1 Introduction . . . . .	7
2-2 The hydrogen spectrum . . . . .	7
2-3 Complex spectra and complex atoms . . . . .	11
2-4 Excitation potentials and ionization potentials . . . . .	13
2-5 Two types of collisions. The metastable state . . . . .	15
2-6 Hyperfine structure of spectral lines . . . . .	16
2-7 Relative intensities of lines in a multiplet . . . . .	16
CHAPTER 3. SOME PHYSICAL FEATURES OF THE D-C ARC DISCHARGE . . . . .	18
3-1 Notes on the mechanism of the arc discharge . . . . .	18
3-2 Excitation in the arc . . . . .	18
3-3 Arc temperature and ionization potential . . . . .	21
3-4 Degree of ionization and temperature . . . . .	24
3-5 Cathode layer enrichment . . . . .	26
3-6 Relative intensities of lines and temperature . . . . .	26
3-7 Measurement of arc temperature . . . . .	29
3-8 Natural shape and width of a line . . . . .	31
3-9 Self-absorption and self-reversal . . . . .	32
CHAPTER 4. POWER FOR THE ARC SOURCE . . . . .	37
4-1 General . . . . .	37
4-2 Current control . . . . .	38
CHAPTER 5. SAMPLE PREPARATION AND OPERATING PROCEDURES . . . . .	41
5-1 Sampling and preparation of specimen . . . . .	41
5-2 Further preparation of specimen prior to arcing . . . . .	46
5-3 Electrode impurities and electrode purification . . . . .	53
5-4 Electrode shapes and sizes . . . . .	57
5-5 Cathode layer excitation . . . . .	61
5-6 Excitation in the presence of an airstream . . . . .	65
5-7 Excitation in noble gas atmospheres . . . . .	65
5-8 Less conventional methods of introducing the elements into the arc column . . . . .	66

CHAPTER 6. QUALITATIVE ANALYSIS . . . . .	67
6-1 The most sensitive lines of the elements . . . . .	67
6-2 Methods of identifying elements . . . . .	70
6-3 Notes on line interference . . . . .	73
6-4 Detection-limit concentrations in the d-c arc . . . . .	74
6-5 Color of the arc image . . . . .	76
6-6 Visual (spectroscopic) analysis . . . . .	77
CHAPTER 7. SELECTIVE VOLATILIZATION. (FRACTIONAL DISTILLATION)	80
7-1 Introduction . . . . .	80
7-2 Order of volatilization in the d-c arc . . . . .	81
7-3 Boiling points and selective volatilization . . . . .	83
7-4 Reduction and elimination of selective volatilization . . . . .	83
7-5 Some advantages of selective volatilization . . . . .	86
CHAPTER 8. GENERAL PRINCIPLES OF QUANTITATIVE ANALYSIS. . . . .	88
8-1 Introduction . . . . .	88
8-2 Some fundamental considerations in quantitative spectrochemical analysis . . . . .	88
INTERNAL STANDARDS (SECTIONS 8-3 THROUGH 8-14)	
8-3 General discussion . . . . .	90
8-4 Choosing an internal standard . . . . .	91
8-5 Factor No. 1 . . . . .	92
8-6 Factor No. 2: Volatilization rates . . . . .	95
8-7 Factor No. 3: Excitation differences . . . . .	96
8-8 Factor No. 4: Self-absorption in the internal standard line . . . . .	99
8-9 Factor No. 5: Separation of internal standard and analysis lines . . . . .	101
8-10 Factor No. 6: Purity of the internal standard . . . . .	102
8-11 Factor No. 7: Ionization potential differences . . . . .	102
8-12 Factor No. 8: Atomic weight differences . . . . .	102
8-13 Factor No. 9: Stability of the intensity ratio of the analysis pair to compositional changes . . . . .	102
8-14 Variable and mutual internal standards . . . . .	104
8-15 Quantitative analysis using line width . . . . .	105
8-16 The presence of self-absorption in the analysis line . . . . .	106
8-17 The possibility of using absorption intensity ratios in quantitative analysis . . . . .	109
8-18 Standards for quantitative spectrochemical analysis . . . . .	111
8-19 Statistical presentation of the reproducibility (precision) and accuracy of a method . . . . .	116
CHAPTER 9. THE EFFECT OF A CHANGE OF MATRIX ON LINE INTENSITY . . . . .	119
9-1 Introduction . . . . .	119
9-2 Some examples . . . . .	119
9-3 Apparent causes of the matrix effect . . . . .	123
9-4 Spectroscopic buffers . . . . .	128

CHAPTER 10. ENRICHMENT PROCEDURES . . . . .	130
10-1 Introduction . . . . .	130
10-2 Chemical-precipitation techniques . . . . .	130
10-3 Ion-exchange enrichment techniques . . . . .	132
10-4 Fire-assay procedures . . . . .	133
10-5 Enrichment by means of special spectrochemical operations . . . . .	133
CHAPTER 11. THE PHOTOGRAPHIC MEASUREMENT OF RADIANT ENERGY AND THE CONSTRUCTION OF A WORKING CURVE . . . . .	139
11-1 The microphotometer, density, and the calibration curve . . . . .	139
11-2 The characteristic curve . . . . .	144
11-3 Recording a graded series of intensities for the construction of a calibration curve . . . . .	148
11-4 The working curve . . . . .	154
11-5 Other methods of obtaining intensities and the working curve . . . . .	159
11-6 Visual determination of line intensity for semiquantitative analysis . . . . .	164
11-7 Correction for the presence of background . . . . .	164
11-8 Correction for the presence of an interfering line . . . . .	167
CHAPTER 12. BAND SPECTRA . . . . .	170
12-1 Introduction . . . . .	170
12-2 Notes on molecular excitation . . . . .	170
12-3 Examples of band spectra emitted by the d-c arc . . . . .	171
12-4 Details of AlO, CN, SiO, and CaO band spectra . . . . .	172
PART 2. THE ELEMENTS	
CHAPTER 13. GENERAL SEMIQUANTITATIVE AND QUANTITATIVE METHODS APPLICABLE TO A LARGE NUMBER OF ELEMENTS . . . . .	179
13-1 General semiquantitative schemes . . . . .	179
13-2 General methods using internal standards . . . . .	182
13-3 General schemes for silicates . . . . .	183
13-4 General schemes for the analysis of soils and biological materials . . . . .	191
CHAPTER 14. LI; RB AND CS . . . . .	194
14-1 Lithium . . . . .	194
14-2 Rubidium and Cesium . . . . .	196
CHAPTER 15. B; BE; SR AND BA . . . . .	202
15-1 Boron . . . . .	202
15-2 Beryllium . . . . .	204
15-3 Strontium and barium . . . . .	205
CHAPTER 16. SC; ZR AND HF; U AND TH; RE . . . . .	210
16-1 Scandium . . . . .	210
16-2 Zirconium and hafnium . . . . .	211
16-3 Uranium and thorium . . . . .	214
16-4 Rhenium . . . . .	217

CHAPTER 17. THE RARE EARTH ELEMENTS (Y AND ELEMENTS 57-71)	218
CHAPTER 18. NI AND CO; V; CR	227
18-1 Nickel and cobalt	227
18-2 Vanadium	230
18-3 Chromium	231
CHAPTER 19. GA; IN; TL	233
19-1 Gallium	233
19-2 Indium	237
19-3 Thallium.	238
CHAPTER 20. PB; CU; SN; GE	242
20-1 Lead	242
20-2 Copper	244
20-3 Tin	246
20-4 Germanium	248
CHAPTER 21. THE NOBLE METALS. AG; AU; PT, PD, RH, IR, OS, AND RU	251
21-1 Silver.	251
21-2 Gold	252
21-3 Elements of the platinum group (Pt, Pd, Rh, Ir, Os, and Ru)	253
CHAPTER 22. W; MO; NB AND TA	258
22-1 Tungsten	258
22-2 Molybdenum	259
22-3 Niobium and tantalum	260
CHAPTER 23. ZN AND CD; AS, SB, BI, AND HG	264
23-1 Zinc and cadmium	264
23-2 Arsenic, antimony, bismuth, and mercury	267
CHAPTER 24. TE AND SE; P; C	272
24-1 Tellurium and selenium	272
24-2 Phosphorus	274
24-3 Carbon	275
CHAPTER 25. FLUORINE AND CHLORINE	277
25-1 Introduction	277
25-2 Structure of CaF bands	277
25-3 Some properties of CaF bands and a few general considerations on their use	278
25-4 The use of SrF and BaF bands	279
25-5 Quantitative procedures using CaF bands	280
25-6 Use of CaF 6036 in a helium atmosphere	282
25-7 Chlorine	282

CHAPTER 26. COMMON ELEMENTS USUALLY PRESENT AS MAJOR CONSTITUENTS . . . . .	284
26-1 Introduction . . . . .	284
26-2 Methods for determining the common elements in silicates . . .	287
26-3 Calcium in feldspars . . . . .	293
26-4 The alkali metals, sodium and potassium . . . . .	294
26-5 Determination of the common elements in materials other than silicate rocks . . . . .	297
26-6 Comments on the detection of the individual common elements and their quantitative determination as trace elements . . . .	301
BIBLIOGRAPHY . . . . .	305
APPENDIX. WAVELENGTH TABLES . . . . .	353
PERIODIC TABLE . . . . .	429
AUTHOR INDEX . . . . .	431
SUBJECT INDEX . . . . .	441
