Algorithms and Programs	xvii
List of Symbols	xxi
INTRODUCTION	1
1. CLASSICAL MECHANICS, QUANTUM MECHANICS	4
The Three Laws of Mechanics	5
The Equations of Motion	5
Work, Kinetic Energy and Potential	8
Conservation of Energy	12
Linear Harmonic Oscillator	12
Motion of a Body Consisting of Particles	19
The Kinetic Energy of Translational Motion	22
Intermolecular Forces	25
The Pair Potential	27
The Law of Corresponding States: Four Hypotheses	30
Transition to Quantum Mechanics	39
The Schrödinger Equation	49
2. PRESSURE AND TEMPERATURE	60
Mechanical Equilibrium and the Measurement of Pressure	61
Thermal Equilibrium and the Zeroth Law of Thermodynamics	63
Empirical Temperature	64
Absolute Temperature Scale	67
The Carnap Criteria	71
3. EQUATIONS OF STATE	72
Size of the Molecules and the Covolumen	78
The Virial Equation and the Compressibility Factor	82

Molecular and Macro Parameters of the Law of Corresponding States	87
The Virial Equation of State and the Second Virial Coefficient	90
Two-Parameter Cubic Equations of State	97
The Redlich–Kwong Equation of State	101
The Peng–Robinson Equation of State	107
The Lee–Kessler Equation of State	114
The Equation of State of Liquids	120
Nonpolar Molecules	123
Polar Molecules	156
Appendix A: Double Cubic Spline	161
4. CONSERVATION PRINCIPLES	162
The Isolated Body	162
Classification and Description of the Thermodynamical Systems	164
The First Law of Thermodynamics	166
Appendix A: Mathematical Relationships Between the Variables of the Multivariable Equation of State	167
Appendix B: On a Mathematical Property of Homogeneous Linear Functions	169
5. EQUILIBRIUM	171
The Second Law of Thermodynamics	171
The Fundamental Equation of Thermodynamics and Intensive Variables	173
Entropy Representation of the Fundamental Equation of Thermodynamics	175
Conditions of Equilibrium Expressed in Terms of Intensive Properties	176
Identity of Thermodynamic Temperature and Absolute Temperature	178
The Condition of Equilibrium: The General Case	182
The Euler Relation	184
The Gibbs–Duhem Relation: The Degrees of Freedom of Homogeneous Phases	185
Degrees of Freedom of Heterogeneous Systems	187
6. THERMODYNAMIC POTENTIAL FUNCTIONS	188
The Energy Minimum Principle	189
The Legendre Transformation	191
Free Energy	196
The Enthalpy	198
The Free Enthalpy	199
Relations Between Thermodynamic Functions	201

7. ELEMENTS OF STATISTICAL THERMODYNAMICS	213
Canonical Ensemble	215
Quantum States and Microstates	221
Partition Function and Thermodynamic Properties	244
Factorization of the Partition Function	249
Partition Function of Translational Motion	251
Partition Function of the Harmonic Oscillator	260
Partition Function of the Rotator	267
The Third Law of Thermodynamics	282
8. THE ENTHALPY	284
Enthalpy and Internal Energy	284
The Throttling Effect	285
Calculation of Enthalpy	288
Enthalpy of the Ideal Gas	304
Pressure Correction of Enthalpy	310
Calculation of the Enthalpy of Multicomponent Homogeneous Phases: Concept of the Pseudo-One-Component Phase	317
9. CALCULATION OF THE THERMODYNAMIC PROPERTIES OF A ONE-COMPONENT HOMOGENEOUS PHASE	320
The Basic Case: P, T are Known	321
One of the Independent Variables is Temperature	353
One of the Independent Variables is Pressure	359
One of the Independent Variables is the Molar Volume	364
The Independent Variables are $h, u, \text{ or } s$	368
Summary of Single-Phase Cases	369
10. PHASE EQUILIBRIUM IN ONE-COMPONENT SYSTEMS	372
Isothermal Change of Molar Free Enthalpy with Pressure	372
Fugacity	375
Degrees of Freedom of Two-Phase Systems	377
The Clausius–Clapeyron Equation	377
Calculation of Equilibrium Vapor Pressure	379
The Two-Phase Range	383
11. MIXTURES	387
Concept of the Ideal Mixture and its Three Models	388
Free Enthalpy of Mixing	401
Thermodynamics of Real Mixtures	409

Calculation of Thermodynamic Excess Quantities	430
Molecular Structure and Thermodynamic Excess	
Properties of Mixtures	456
The Regular Mixture	460
Local Inhomogeneity	475
The NRTL Equation	476
The Wilson Equation	483
The UNIQUAC Equation	493
The UNIFAC Equation	499
Comparison of Different Equations	508
Two-Component Systems of Limited Solubility	510
12. VAPOR-LIQUID EQUILIBRIA	517
Vapor-Liquid Equilibrium for Binary Mixtures	517
Azeotrope Mixtures	533
General Case of Vapor-Liquid Equilibria	536
Calculation of Vapor-Liquid Equilibrium	
Using an Equation of State	538
Calculation of Vapor-Liquid Equilibrium Based on	
Separate Models for the Fugacity and Activity Coefficients	547
Special Cases of the Vapor-Liquid Equilibrium Calculation	580
Multiphase Equilibrium	581
13. EQUILIBRIUM OF CHEMICAL REACTIONS STOICHIOMETRY	590
Stoichiometry	591
Chemical Equilibrium	608
Enthalpy and Free Enthalpy of Reaction	614
Displacement of Equilibrium	623
Standard Free Enthalpy of Reaction and the Reaction Constant	633
Calculation of Equilibrium Composition	640
Appendix: Data File	661
Substance Index for Appendix	719
Index	723
