

Contents

Preface	<i>page ix</i>
Glossary of Symbols	xi
1 Introduction	1
2 Explosions in Gases	8
THERMAL EXPLOSIONS	
Theory of Thermal Explosions	
Thermal Explosion Limits	
BRANCHING-CHAIN EXPLOSIONS	
Chain Reactions	
Branching-chain Explosion Limits: <i>The first, or lower, limit; The second, or upper, limit; The third limit.</i>	
3 Flames and Combustion Waves	26
PRE-MIXED FLAMES	
Properties of Pre-mixed Flames	
Stabilization of Flames on Burners	
Mechanism of Flame Propagation: <i>Thermal propagation of flames: the ignition point; The preheating zone; The reaction zone; Further theories of thermal propagation; Diffusional propagation of flames; Advanced treatments of flame propagation.</i>	
DIFFUSION FLAMES	
Properties of Diffusion Flames	
Theory of Diffusion Flames	
The Chemistry of Diffusion Flames	
4 Detonation Waves in Gases	54
Shock Waves	
Structure of Detonation Waves	

Departures from Ideal Behaviour Initiation of Detonation	
5 The Chemistry of Combustion	<i>page 72</i>
Description of Important Reactions The Hydrogen–Oxygen Reaction: <i>Effect of surfaces.</i> The Oxidation of Carbon Monoxide Other Oxidation Reactions	
6 Combustion of Hydrocarbons	85
Characteristics of Hydrocarbon Combustion Degenerate Branching Summary of Predominant Reactions: <i>Initiation: fuel + oxygen; Reactions of R• radicals; Reactions of RO₂• radicals; Reactions of peroxides and hydroperoxides; Reactions of RO• radicals; Reactions of aldehydes; Reactions of RCO• radicals; Reactions of RCO₃• radicals; Reactions of peracids; Degenerate branching intermediates; Reactions of •OH and HO₂• radicals.</i> Chain Cycles in Slow Combustion The Oxidation of Hydrocarbons: <i>The oxidation of methane; The oxidation of higher hydrocarbons.</i> High-Temperature (Flame) Combustion of Hydrocarbons: <i>The high-temperature oxidation of methane; Atmospheric pollution.</i>	
7 Special Aspects of Gaseous Combustion	108
EMISSION OF LIGHT Introduction Non-Equilibrium Energy Distributions IONIZATION Equilibrium Ionization Mechanism of Ion Formation Aerodynamic Effects CARBON FORMATION Nature of Soot Mechanism of Formation	

COOL FLAMES	
The Cool-flame Phenomenon	
Mechanism of Formation	
8 Combustion in Mixed and Condensed Phases	<i>page</i> 126
REACTION IN SOLIDS	
Introduction	
Detonation in Solids	
Deflagration in Solids	
REACTIONS IN MIXED PHASES	
Gas-phase Combustion	
Heterogeneous Combustion	
9 High Explosives	142
Introduction	
Explosive Materials	
Military Explosives	
Commercial Explosives	
Detonators	
Blasting	
Shaped Charges	
Air-blast	
10 Rocket Propulsion	155
Introduction	
The Expansion Nozzle: <i>Equilibrium and 'frozen' flow.</i>	
Impulse of Rocket Engines	
Choice of Propellant System: <i>Engineering considerations.</i>	
Classification of Propellants	
Performance of Typical Liquid Propellants: <i>Density specific impulse.</i>	
Solid Propellants: <i>Burning characteristics.</i>	
Ignition Delays	
11 Internal Combustion Engines	171
THE SPARK-IGNITION ENGINE	
Principles of Operation	

Performance Considerations	
Knock in Engines	
THE DIESEL ENGINE	
Principles of Operation	
Performance Considerations	
Combustion Processes in the Diesel Engine	
GAS TURBINE AND JET ENGINES	
12 Heating Applications	<i>page</i> 188
Introduction	
Gas Burners	
Oil Burners	
Pulverized Coal Burners: <i>Cyclone furnace.</i>	
Solid Fuel Beds	
References	198
Index	203
