

Contents

Chapter 1 Introduction	1
1-1 Evolution of Ideas on the Electrical Double Layer	1
1-2 Evolution of Ideas in Electrode Kinetics	5
1-3 Definitions, Nomenclature, and Notations	10
<i>a.</i> Potentials	10
<i>b.</i> Nomenclature and Notations	11
1-4 Literature	12
PART ONE: THE ELECTRICAL DOUBLE LAYER	15
Chapter 2 Thermodynamics of the Ideal Polarized Electrode	17
2-1 Application of the Gibbs Adsorption Isotherm	17
2-2 The Electrocapillary Curve	21
2-3 Relative Surface Excesses	24
<i>a.</i> Determination of Relative Surface Excesses	24
<i>b.</i> Further Thermodynamic Correlations	28
2-4 Double-Layer Capacity	28
<i>a.</i> Definition	28
<i>b.</i> Correlation between Capacity and Charge on the Electrode, Interfacial Tension, and Relative Surface Excesses	30
Chapter 3 Structure of the Diffuse Double Layer in the Absence of Specific Adsorption	33
3-1 The Gouy-Chapman Theory	33
3-2 Stern's Modification of the Gouy-Chapman Theory and Its Experimental Verification	35
3-3 Distribution of Potential	41
3-4 Ionic Concentrations in the Plane of Closest Approach and Ionic Contributions of the Diffuse Double Layer to the Total Charge	45

3-5	Mixed Electrolytes	47
3-6	Modifications of the Gouy-Chapman Theory and Statistical Theories of the Double Layer	49
3-7	Relaxation of the Diffuse Double Layer and the Question of Frequency Dependence.	50
Chapter 4 Structure of the Double Layer with Specific Adsorption		53
4-1	Criteria for Specific Adsorption	53
	<i>a.</i> The Esin and Markov Effect	53
	<i>b.</i> Dependence of dC_{\pm}/dE on Potential	59
4-2	Amount of Specifically Adsorbed Ions	60
4-3	Grahame's Model of the Double Layer and Nature of Specific Adsorption	63
4-4	Distribution of Potentials	65
	<i>a.</i> Distribution of Potential in the Diffuse Double Layer	65
	<i>b.</i> Distribution of Potential in the Compact Double Layer	68
4-5	Structure of the Compact Double Layer	73
Chapter 5 Adsorption at an Ideal Polarized Electrode		81
5-1	Isotherms and Equations of State	81
5-2	Dependence of Standard Free Energy of Adsorption on Electrical Variable	87
	<i>a.</i> Selection of Electrical Variable	87
	<i>b.</i> Ions	89
	<i>c.</i> Uncharged Substances	91
5-3	Charge-Coverage Relationship	93
5-4	Isotherm Assignment from Surface Excesses	95
5-5	Isotherm Assignment from Surface Pressures	99
5-6	Analysis Based on Double Layer Capacity and Assignment of Isotherms	101
	<i>a.</i> Correlation between Capacity and the Isotherm Parameter Depending on Charge or Potential	101
	<i>b.</i> Capacity-Potential Relationship for a Standard Free Energy Varying Linearly with Potential or Charge	106
	<i>c.</i> Capacity-Potential Relationship for a Standard Free-Energy Quadratic in the Potential or the Charge	108
5-7	Application of the Frumkin Isotherm with Potential-Dependent Interaction Parameter	112
5-8	Distribution of Potential	115
5-9	Adsorption Kinetics	117
	<i>a.</i> Control by Adsorption Rate	117
	<i>b.</i> Control by Diffusion	118

Chapter 6	The Electrical Double Layer for Other Systems than the Mercury-Aqueous Solution Interface.	122
6-1	Liquid Metallic Phase in Aqueous Solution	122
6-2	Solid Electrode in Aqueous Solution	126
	<i>a.</i> Point of Zero Charge	126
	<i>b.</i> Double-Layer Capacity	129
	<i>c.</i> Specific Ionic Adsorption	134
	<i>d.</i> Adsorption of Uncharged Substances	137
6-3	Nonaqueous Solvents	139
	<i>a.</i> Mixtures of Water and Another Solvent	139
	<i>b.</i> Nonaqueous Solvents at the Exclusion of Molten Salts	139
6-4	Molten Salts	142
	PART TWO: ELECTRODE KINETICS	151
Chapter 7	Kinetics of Simple Electrode Processes without Specific Adsorption or Chemisorption	153
7-1	Introduction	153
7-2	Current-Overvoltage Characteristic	154
	<i>a.</i> Derivation	154
	<i>b.</i> Properties of the Current-Overvoltage Characteristic	159
7-3	Exchange Current	163
	<i>a.</i> Explicit Form	163
	<i>b.</i> Determination of the Transfer Coefficient from the Dependence of the Exchange Current on Reactant Activities	165
	<i>c.</i> Heat of Activation	167
7-4	Influence of Mass Transfer	167
7-5	Mixed Potentials	172
7-6	Theories of Charge-Transfer Processes	173
Chapter 8	Kinetics of Electrode Processes Involving more than One Step	178
8-1	Two Consecutive Processes	178
8-2	Elucidation of Mechanisms by Determination of Stoichiometric Numbers	180
8-3	Elucidation of Mechanisms by Determination of Reaction Orders	183
	<i>a.</i> Single Charge-Transfer Reaction	183
	<i>b.</i> Typical Applications	185
	<i>c.</i> Two Consecutive Charge-Transfer Reactions	189

x Contents

8-4	Coupling of Charge Transfer with Chemical Reactions not at Equilibrium	191
8-5	Detection and Determination of Intermediates	194
Chapter 9 Correlation between Electrode Kinetics and Double-Layer Structure in the Absence of Significant Specific Adsorption of Reactants and Products		
9-1	Introduction	197
9-2	Processes without Specific Adsorption of Supporting Electrolyte	198
9-3	Processes with Specific Adsorption of the Supporting Electrolyte	205
9-4	Processes with a Coupled Chemical Reaction	207
9-5	Nonequilibrium Double Layer	208
9-6	Comparison of Theory and Experiment: Reduction of Cations	209
	<i>a.</i> Hydrogen Ion	209
	<i>b.</i> Zinc, Gallium, and Indium	212
	<i>c.</i> Europium (III)/(II)	213
	<i>d.</i> Nickel (II) and Iron (II)	214
9-7	Comparison of Theory and Experiment: Reduction of Anions	217
	<i>a.</i> Peroxydisulfate, Ferricyanide, and Various Complexes of the Platinum Metal Group	217
	<i>b.</i> Chromate	221
	<i>c.</i> Bromate and Iodate	223
9-8	Comparison of Theory and Experiment: Processes with a Coupled Chemical Reaction	227
9-9	Comparison of Theory and Experiment: Uncharged Substances	227
9-10	Electrode Processes in Presence of an Organic Additive	228
	<i>a.</i> Organic Ions	228
	<i>b.</i> Neutral Substances	232
	<i>c.</i> Influence of Mass Transfer	234
9-11	Double-Layer Effects for Solid Electrodes in the Absence of Chemisorbed Film	234
Chapter 10 Kinetics of Electrode Processes with Chemisorption of Reactants and/or Products		
10-1	Classification of Electrode Processes with Adsorption	240
10-2	Metal-Gas Chemisorption	242
	<i>a.</i> Physical Adsorption versus Chemisorption	242

	<i>b.</i> Isotherms	243
	<i>c.</i> Heat of Adsorption	244
10-3	Electrode Chemisorption	246
	<i>a.</i> Hydrogen	246
	<i>b.</i> Oxygen	255
10-4	Electrode Processes with Chemisorption of a Reacting Species	260
	<i>a.</i> Introduction	260
	<i>b.</i> Current-Overvoltage Characteristics with Chemisorption Obeying the Langmuir or Temkin Isotherm	261
	<i>c.</i> Correlation between the Apparent Exchange Current and the Standard Free Energy of Adsorption	263
	<i>d.</i> Elucidation of Reaction Mechanisms	266
10-5	Electrode Processes with Chemisorption of a Reacting Species and Specific Adsorption of the Electrolyte or an Additive	269
	<i>a.</i> Ionic Specific Adsorption	269
	<i>b.</i> Uncharged Substances	273
10-6	Inhibition of Electrode Processes by a Chemisorbed Film	274
	<i>a.</i> Inhibition of the Hydrogen Electrode Reaction	274
	<i>b.</i> Inhibition of the Oxidation of Certain Organic Substances by Chemisorbed Oxygen	276
Chapter 11 Kinetics of Electrode Processes with Potential-Dependent Adsorption of Reactants and/or Products		290
11-1	Current-Potential Characteristics	290
11-2	Processes with Coupled Chemical Reactions	293
11-3	Double-Layer Effects	297
Appendix	List of Most Important Symbols	299
Author Index	303
Subject Index	311
