Preface . . . . .	vii
Acknowledgements . . . . .	ix
Symbols: 1. Arrangement . . . . .	xvii
2. English Symbols . . . . .	xvii
3. Greek Symbols . . . . .	xxiv
4. Other Symbols . . . . .	xxv
Units, S.I. Units and Conversion Factors . . . . .	xxvii
Periodic Table of the Elements with Crystal Ionic Radii . . . . .	xxix

## Volume 1

### Structure and Kinetic Properties

#### CHAPTER 1. LIQUID METALS

1.1 Structure of Pure Liquid Metals . . . . .	1
1.2 Diffusivities and Viscosities for Pure Metals . . . . .	6
1.3 Structure in Liquid Alloys . . . . .	14
1.4 Diffusivities and Viscosities in Alloys . . . . .	18
1.5 Electromigration in Alloys . . . . .	23
1.6 Non-Metals in Metals . . . . .	28
1.7 Non-metals in Alloys . . . . .	34
References . . . . .	36
Further Reading . . . . .	37

#### CHAPTER 2. IONIC MELTS

2.1 Ionic Halides . . . . .	38
2.1.1 Liquid Structures . . . . .	38
2.1.2 Diffusivities and Viscosities . . . . .	42
2.1.3 Electrical Conductance . . . . .	47
2.1.4. Electrolysis and Transport . . . . .	50
2.1.5 Halide Mixtures . . . . .	53
2.1.6 Interdiffusion . . . . .	58
2.2 Non-ionic Halides . . . . .	59
2.3 Oxides . . . . .	59
2.4 Sulphides . . . . .	61
2.5 Melts with Stable Polyatomic Ions . . . . .	62
2.6 Metals in Molten Salts . . . . .	67
2.7 Gases in Molten Salts . . . . .	73
References . . . . .	75
Further Reading . . . . .	76

## CHAPTER 3. POLYMERIC MELTS

3.1	Pure Network-forming Oxides . . . . .	78
3.2	Reactions between Ionic and Network-Forming Oxides . . . . .	80
3.2.1	Crystals . . . . .	80
3.2.2	Liquids . . . . .	81
3.3	Distribution of Ions in Polymeric Melts . . . . .	87
3.4	Properties of Binary Melts . . . . .	92
3.4.1	Viscosity and Expansivity . . . . .	92
3.4.2	Diffusivity and Electrical Conductance . . . . .	99
3.5	Complex Melts . . . . .	106
3.5.1	Structure and Viscosity . . . . .	106
3.5.2	Conductance . . . . .	110
3.6	The Glassy State . . . . .	111
	References . . . . .	114
	Further Reading . . . . .	115

## Thermodynamic Properties I

## CHAPTER 4. THERMODYNAMICS OF SOLUTIONS

4.1	The Thermodynamic Properties . . . . .	116
4.2	Activities from the Gibbs–Duhem Integration . . . . .	123
4.2.1	Binary Solutions . . . . .	123
4.2.2	Ternary Solutions . . . . .	127
4.3	Thermodynamic Data from Phase Diagrams . . . . .	132
4.4	Solution Models . . . . .	140
4.4.1	Raoultian . . . . .	140
4.4.2	Regular . . . . .	141
4.4.3	Regular Ternary . . . . .	143
4.4.4	Regular Quaternary . . . . .	146
4.4.5	Quasichemical Binary . . . . .	147
4.4.6	Quasichemical Ternary . . . . .	151
4.5	Interaction Parameters . . . . .	154
	References . . . . .	156
	Further Reading . . . . .	157

## CHAPTER 5. METAL SOLUTIONS

5.1	Activity Coefficients in Binary Mixtures . . . . .	158
5.2	Heats and Entropies in Binary Mixtures . . . . .	165
5.3	Regular and Quasi-Chemical Models for Binaries . . . . .	170
5.4	Problems with Models for Binaries . . . . .	172
5.5	The Spectrum of Binary Behaviour . . . . .	174
5.6	Activity Coefficients in Ternary Mixtures . . . . .	177
5.7	Interaction Coefficients in Dilute Alloys . . . . .	182
5.8	Dilute Solutes in Alloys . . . . .	190
5.9	Gases in Liquid Metals . . . . .	198
	References . . . . .	200
	Further Reading . . . . .	201

## CHAPTER 6. SALT MELTS

6.1	Basic Principles and Equations . . . . .	202
6.1.1	Ideal Entropies of Mixing and Activities . . . . .	202
6.1.2	Regular Types of Mixing for Salts . . . . .	204
6.1.3	Ideal and Regular Activity Curves . . . . .	209
6.1.4	Randomness in Salt Mixtures . . . . .	210
6.2	Halide Melts . . . . .	211
6.2.1	Simple Halide Mixtures . . . . .	211
6.2.2	Alkali Halides with Copper and Silver Halides . . . . .	218
6.2.3	Mixtures with Two Cations and Two Anions . . . . .	221
6.2.4	Mixtures of Ions with Different Charges . . . . .	222
6.3	Cryoscopy with Salt Mixtures . . . . .	224
6.4	Some Mixtures with Complex Ions . . . . .	227
6.5	Oxide Mixtures . . . . .	235
6.6	Oxides Mixed with Other Salts . . . . .	239
6.7	Mixtures Involving Carbonates . . . . .	242
6.7.1	Carbonate and Carbonate Oxide Melts . . . . .	242
6.7.2	Carbonate Sulphate Melts . . . . .	244
	References . . . . .	245
	Further Reading . . . . .	246

## CHAPTER 7. POLYMERIC MELTS

7.1	Introduction . . . . .	247
7.2	Binary Mixtures of Metal Oxides with Silica . . . . .	247
7.2.1	Phase Diagrams and the Cryoscopy of Silica . . . . .	247
7.2.2	Free Energies of Formation of Crystalline Silicates . . . . .	248
7.2.3	Free Energies of Mixing and Activities . . . . .	250
7.2.4	Silicates Containing Two Basic Oxides . . . . .	255
7.3	Phosphates . . . . .	257
7.3.1	Heats of Formation of Crystalline and Glassy Phosphates . . . . .	257
7.3.2	Thermodynamics of Phosphate Polymer Distributions . . . . .	261
7.3.3	Free-Energy Curves and Distributions . . . . .	267
7.3.4	Distributions at High Temperatures . . . . .	267
7.3.5	Glasses Containing Two Cations . . . . .	268
7.4	Anions in Silicate Melts . . . . .	270
7.4.1	Silicate Polymers . . . . .	270
7.4.2	Anion Distributions and Activities in Binary Silicates . . . . .	271
7.5	Calculated Activities in Silicates with Two Basic Oxides . . . . .	274
7.5.1	Ideal Mixing of Silicates . . . . .	274
7.5.2	Comparison Between Ideal and Measured Activities . . . . .	276
7.5.3	A Regular Model for Ternary Silicate Melts . . . . .	280
7.6	Aluminate and Borate Melts . . . . .	282
7.7	Ternary Silicate Melts Containing Alumina . . . . .	283
7.8	Oxidation and Reduction Equilibria in Silicates . . . . .	284
	References . . . . .	288
	Author Index to Volumes 1 and 2 . . . . .	i-1
	Subject Index to Volumes 1 and 2 . . . . .	i-11
