Preface	vii
Acknowledgements	ix
Symbols: 1. Arrangement	xvii
2. English Symbols	xvii
3. Greek Symbols	xxiv
4. Other Symbols	xxv
Units, S.I. Units and Conversion Factors	xxvii
Periodic Table of the Elements with Crystal Ionic Radii	xxix

Volume 2

Thermodynamic Properties II

CHAPTER 8. SLAGS AND MATTES

8.1 Sulphur in Slags	291
8.1.1 Gas-Slag Equilibria and Sulphide Capacities	291
8.1.2 Some Structural Considerations	296
8.1.3 Activity Coefficients of Sulphides and Sulphide Solubilities	300
8.1.4 Sulphide Capacities in Silicates with Two Different Cations	300
8.2 Water and Hydrogen in Slags	304
8.3 Carbon and Nitrogen in Slags	307
8.4 Metals in Slags	310
8.5 Slags based on CaF_2	313
8.5.1 Metal Oxide Activities	313
8.5.2 Sulphur in Fluoride Slags	316
8.6 Mattes	318
8.6.1 Simple Sulphide Mixtures	318
8.6.2 Sulphides Dissolving Metal	319
8.6.3 Mixtures of $\text{Cu} + \text{Fe} + \text{S}$	322
8.6.4 Mixtures of $\text{Cu} + \text{Fe} + \text{S} + \text{O}$	324
References	325

CHAPTER 9. HETEROGENEOUS EQUILIBRIA AND FREE-ENERGY DIAGRAMS

9.1 Standard Free Energy—Temperature Diagrams	328
9.1.1 Equilibrium Constants and Free Energies	328
9.1.2 Free-Energy Diagrams	330
9.1.3 Non-Stoichiometric Compounds —	336
9.1.4 Metastable Equilibria	338
9.2 Free-Energy Diagrams for Solutions	342
9.3 Diagrams for Heterogeneous Solution-Equilibria	343

9.4	Some Slag + Metal and Deoxidation Equilibria	346
9.4.1	Equilibria between Liquid Iron and Iron Oxide	347
9.4.2	Simple Deoxidation Equilibria	348
9.4.3	Deoxidation in the Presence of Silica	354
9.4.4	Deoxidation by Carbon	355
9.5	More Complex Equilibria between Slags and Metals	356
9.5.1	Equilibria in the Presence of Carbon	356
9.5.2	The Partition of Silicon between Slag and Metal	358
9.5.3	The Partition of Phosphorus	359
9.5.4	The Partition of Sulphur	360
References		362

Kinetics

CHAPTER 10. CHEMICAL KINETICS

10.1	Introduction	363
10.2	Homogeneous Gas Reactions	363
10.2.1	Activation Energy	363
10.2.2	The Activated Complex	364
10.2.3	Absolute Reaction-Rate Theory	365
10.2.4	The Order of Reactions	366
10.2.5	Reactions near Equilibrium	368
10.2.6	Typical Activation Energies	368
10.3	Homogeneous Reactions in Solution	369
10.4	Heterogeneous Reactions	370
10.4.1	Gas Reactions Catalysed by Solids	370
10.4.2	Solid + Gas Reactions	373
10.4.3	Reactions involving Two Liquids	374
10.5	Electrode Processes	375
10.5.1	Activation Energies and Exchange Currents	375
10.5.2	Effects of Concentration on Exchange Currents	379
10.5.3	Exchange Currents and Rate Constants	381
10.5.4	Exchange Currents for Processes Involving Gases	384
10.5.5	Exchange Currents and Transport Control	385
10.5.6	Simultaneous Anodic and Cathodic Reactions	387
References		392
Further Reading		393

CHAPTER 11. TRANSPORT KINETICS

11.1	Transport in the Absence of Convection	394
11.1.1	Fick's Laws	394
11.1.2	Steady-State Diffusion	395
11.1.3	Unsteady-State Diffusion in a Single Phase	398
11.1.4	Unsteady-State Diffusion in a Two-Phase System	402
11.1.5	Self- and Interdiffusion Coefficients	405
11.1.6	Variation of Diffusivity with Composition	408
11.2	Transport in the Presence of Flow	408
11.2.1	Mass-Transfer Coefficients	408
11.2.2	The Boundary Region and Surface Renewal	412
11.2.3	Mass-Transfer Correlations	416

CONTENTS

xiii

11.2.4	Reactions between Two Stirred Liquids	420
11.2.5	Effects of Temperature	423
11.2.6	Values for m	423
References		424
Further Reading		425

CHAPTER 12. INTERFACIAL PHENOMENA

12.1	Metal + Gas Interfaces	426
12.1.1	Surface Tensions of Metals	426
12.1.2	Nature of the Surface Layer	434
12.1.3	Influence of Two Solutes	436
12.1.4	Kinetics of Adsorption	436
12.1.5	Effect on Eddies at the Interface	437
12.1.6	Effect on Reaction Kinetics	439
12.2	Surface Tensions of Salts and Slags	439
12.3	Slag + Metal Interfaces	443
12.3.1	Interfacial Tensions	443
12.3.2	Contact Angles and Spreading	446
12.4	Electrocapillary Effects	447
12.5	Interfacial Turbulance	452
12.6	Formation of Gases in Metals	455
12.6.1	Homogeneous Nucleation	455
12.6.2	Heterogeneous Nucleation on a Flat Solid	458
12.6.3	Nucleation at Gas-Filled Crevices	458
References		460

CHAPTER 13. REACTIONS BETWEEN LIQUID METALS AND GASES

13.1	Types of Reaction	462
13.2	Reactions Involving Drops	462
13.2.1	Mass Transfer in the Gas	462
13.2.2	Mass Transfer in the Metal Drop	468
13.2.3	Chemical Effects with Drops	469
13.3	Reactions Involving Bubbles Rising in Metals	474
13.3.1	Gas-Phase Resistance	474
13.3.2	Mass Transfer in the Metal Phase	475
13.4	Reactions Involving Bulk Metal and Gas	477
13.5	Effects of Surface-Active Agents	480
13.6	Vapour Evolution from a Metal at Low Pressures	483
13.7	Enhanced Vaporization	487
13.8	Fume from Bursting Bubbles	491
References		493

CHAPTER 14. REACTIONS BETWEEN LIQUID METALS AND SLAGS OR SALTS

14.1	Chemical and Electrochemical Aspects	495
14.1.1	Activation Energies	495
14.1.2	Silicon Transfer from Slag to Metal	500
14.1.3	Electron Transfer and Electroneutrality	505
14.1.4	Sulphur Transfer from Metal to Slag	506
14.1.5	Sulphur Transfer between Two Phases via Slag	512

14.2	Mass Transfer in Slag-Metal Reactions	513
14.2.1	Bubble Stirring	513
14.2.2	Mass Transfer Across Bubble-Stirred Interfaces	516
14.2.3	Partition Coefficients and Equilibrium Constants	520
14.2.4	Simultaneous Fluxes in Slag-Metal Reactions	522
14.3	Slag-Metal-Gas Reactions	523
14.3.1	Equations Involving Overall Driving Force	523
14.3.2	Autocatalytic Nature of the Steelmaking Reactions	525
14.4	Reactions Involving Metal Drops	525
14.4.1	Use and Behaviour of Drops	525
14.4.2	Mass-Transfer Coefficients for Drops	529
14.4.3	Extraction Curves for Drops	533
14.4.4	Drops in Metal + Slag + Gas Reactions	535
	References	535
	Author Index to Volumes 1 and 2	i-1
	Subject Index to Volumes 1 and 2	i-11
