

Contents

Chapter I. Methods of Qualitative Analysis of Multi-Dimensional Dynamical Systems	1
1. Prerequisites from the Qualitative Theory of Two-Dimensional Dynamical Systems	1
2. Analysis of Degenerate Critical Points of a Dynamical System . . .	12
3. Maximally Non-Degenerate Compactification of a Dynamical System	18
4. Separatrix Approximation Method for the Trajectories of a Dynamical System.	21
Chapter II. Qualitative Theory of Homogeneous Cosmological Models Without the Motion of Matter.	24
1. Equations of the General Theory of Relativity.	25
2. Classical Solutions to the Equations of the General Theory of Relativity	26
3. General Properties of Homogeneous Cosmological Models	31
4. Transformation of the Hamiltonian System.	43
5. Cosmological Models of Types I and II	50
6. Cosmological Models of Type IX	54
7. Analysis of Cosmological Models of Types VIII, VII ₀ and VI ₀ . . .	76
8. Transformation of the Dynamical System for Homogeneous Cosmological Models of Class B	85
9. Several General Properties of the Dynamics of Homogeneous Cosmological Models of Types III, IV, VI and VII.	93
10. Analysis of Several Special Properties of Homogeneous Cosmological Models of Types V, VII, III, VI and IV	104
Chapter III. Qualitative Theory of Homogeneous Cosmological Models with the Motion of Matter and Electromagnetic Fields . . .	114
1. Einstein's System of Equations for the Homogeneous Cosmological Model of Type IX with the Motion of Matter	114
2. Transformation of the Dynamical System	117
3. Power Asymptotics. Typical States of the Metric in the Early Stages of the Expansion of Space.	121
4. Combinatorial Model of the Oscillatory Mode.	125
5. Several Common Properties of the Dynamics of Homogeneous Cosmological Models with the Motion of Matter.	130

6. Homogeneous Cosmological Model of Type IX with Electromagnetic Fields	136
Chapter IV. Self-Similar Spherically Symmetric Solutions for the General Theory of Relativity	143
1. Einstein's System of Equations for Spherically Symmetric Self-Similar Solutions.	143
2. Analysis of the Dynamical System	146
3. Transformation of Self-Similar Solutions in Various Coordinates . .	156
4. The Problem of Breakdown of Equilibrium of a Star in the General Theory of Relativity	159
5. Self-Similar Solutions with Expanding and Converging Shock Waves	163
Chapter V. Self-Similar Motion of Self-Gravitating Gas in Stars.	167
1. Resolution of Singularities of the Dynamical System	167
2. Asymptotics of Gas Moving Away from the Center	178
3. Analysis of the Dynamical System on the Components of the Boundary Γ_2 and Γ_8	183
4. Self-Similar Accretion of Self-Gravitating Gas to the Center	189
5. New Solutions in the Model of Stellar Explosions	192
6. Analysis of Models of Explosions in Stellar Envelopes.	207
7. Self-Similar Solutions with Converging Shock Waves	214
Chapter VI. Self-Similar Rotation of an Ideal Gas.	219
1. Definition of Self-Similar Rotation of an Ideal Gas	219
2. Algebraic Integrals for the Self-Similar Rotation of an Ideal Gas . .	221
3. Exact Self-Similar Power Solutions.	226
4. Analysis of the Dynamical System	228
5. Self-Similar Expansion of Rotating Gas	232
6. Several Self-Similar Solutions with $\gamma = 2$	238
Chapter VII. The Dynamics of a Gaseous Ellipsoid	244
1. Equations of Motion of a Non-Gravitating Gaseous Ellipsoid . . .	244
2. Oscillatory Mode of Expansion of a Rotating Gas Cloud into Vacuum	252
3. Analysis of a Problem in the Theory of Shallow Water	258
4. Equations of Motion of a Gravitating Gaseous Ellipsoid.	260
5. Transformation of the Hamiltonian System	263
6. Oscillatory Mode of Motion with Negative Energy	266
7. On the Impossibility of Collapse of a Gravitating Gaseous Ellipsoid in the Presence of Rotation of the Gas	270
8. Oscillatory Mode of Motion with Positive Energy	274
9. Concluding Remarks.	280

Chapter VIII. The Dynamics of Perturbations of the Periodic Toda Lattice	283
1. Hamiltonian Perturbations of the Toda Lattice	283
2. Separatrix Approximation of the Oscillatory Mode	284
3. Hamiltonian Systems Connected with Simple Lie Algebras.	288
4. Non-Linear Oscillatory Modes in Systems of Hydrodynamical Type.	292
Bibliography	296
