

# CONTENTS

|   |          |
|---|----------|
| PREFACE   | page vii |
| PART 1. PRINCIPLES OF COSMOLOGY                           |          |
| Chapter I Physics and Cosmology                           | 3        |
| II The Cosmological Principle                             | 11       |
| PART 2. OBSERVATIONAL EVIDENCE                            |          |
| III The Background Light of the Sky                       | 19       |
| IV The Problem of Inertia                                 | 27       |
| V Observations of Distant Nebulae                         | 34       |
| <i>Appendix: The <math>K</math>-term of the Red Shift</i> | 48       |
| VI Astrophysical and Geophysical Data                     | 51       |
| VII Microphysics and Cosmology                            | 59       |
| PART 3. COSMOLOGICAL THEORIES                             |          |
| VIII Theoretical Concepts                                 | 65       |
| IX Newtonian Cosmology                                    | 75       |
| X Relativistic Cosmology                                  | 90       |
| XI Kinematic Relativity                                   | 123      |
| XII The Steady-State Theory                               | 140      |
| XIII The Theories of Eddington, Dirac and Jordan          | 157      |
| XIV The Present Position in Cosmology                     | 165      |
| BIBLIOGRAPHY  | 170      |
| INDEX   | 177      |
