<i>Preface</i> . . . . .	<i>page</i> ix
<i>Chapter I. EQUATIONS OF MOTION</i> . . . . .	1
General introduction . . . . .	1
Planetary form of the equations of motion . . . . .	8
Satellite or stellar form . . . . .	11
Frames of reference . . . . .	15
Reference to polar coordinates in the osculating plane . . . . .	22
True longitude as independent variable . . . . .	28
Eccentric anomaly as independent variable . . . . .	30
Reference to the coordinates of the disturbing planet . . . . .	31
Motion referred to an arbitrary plane of reference	34
<i>Chapter II. METHODS FOR THE EXPANSION OF A FUNC- TION</i> . . . . .	36
Expansion by functions of an operator . . . . .	37
Lagrange's theorem for the expansion of a function defined by an implicit equation, and its extension	37
Transformation of a Fourier expansion from one argument to another where the relation between the arguments is defined by an implicit equation	40
Expansion by symbolic operators . . . . .	45
Product of two Fourier series . . . . .	45
Fourier expansions of series given in powers of the sine and cosine . . . . .	47
Function of a Fourier series . . . . .	49
Powers of a Fourier series . . . . .	53
Cosines and sines of Fourier series . . . . .	54
Bessel's functions . . . . .	55
Hypergeometric series . . . . .	56
Numerical calculation of series . . . . .	59

<i>Chapter III.</i> ELLIPTIC MOTION . . . . .	<i>page</i> 62
Solution of the equations . . . . .	62
Relations between the anomalies . . . . .	65
Kepler's laws . . . . .	66
Developments in terms of the eccentric anomaly . . . . .	68
Developments in terms of the true anomaly . . . . .	71
Developments in terms of the mean anomaly . . . . .	72
Literal developments to the seventh order . . . . .	79
Development by harmonic analysis . . . . .	80
Numerical solution of Kepler's equation . . . . .	81
 <i>Chapter IV.</i> DEVELOPMENT OF THE DISTURBING FUNCTION . . . . .	 82
Development in terms of elliptic elements . . . . .	82
Expansion by operators in powers of the eccentricities . . . . .	87
Expansion in multiples of the true anomaly . . . . .	89
Expansion along powers of the inclination . . . . .	91
Development to the third order . . . . .	93
Transformation from true to mean anomalies . . . . .	94
Properties of the expansions . . . . .	95
Calculation of the constant term . . . . .	97
Development in terms of the eccentric anomalies . . . . .	99
Transformation to mean anomalies . . . . .	100
The functions of the major axes . . . . .	102
Literal expansion to the second order in terms of the mean anomalies . . . . .	112
The second term of the disturbing function . . . . .	114
 <i>Chapter V.</i> CANONICAL AND ELLIPTIC VARIABLES . . . . .	 117
Contact transformations . . . . .	118
Jacobi's partial differential equation and its solutions . . . . .	121
Jacobian method of solution . . . . .	127
Other canonical and non-canonical sets . . . . .	131
The case of attraction proportional to the distance . . . . .	136

CONTENTS

vii

<i>Chapter VI.</i>	SOLUTION OF CANONICAL EQUATIONS . . . . .	page 138
	General properties of the variables and of the disturbing function . . . . .	138
	Elimination of a portion of the disturbing function	143
	First approximation . . . . .	146
	Long period terms . . . . .	152
	Second approximation . . . . .	156
	Calculation of the second approximations to long period and secular terms . . . . .	161
	Summary and special cases . . . . .	169
<i>Chapter VII.</i>	PLANETARY THEORY IN TERMS OF THE ORBITAL TRUE LONGITUDE . . . . .	174
	Equations of motion and method of solution . . . . .	174
	The first approximation . . . . .	178
	Solution of the equations . . . . .	185
	Equations for the variations of the elements . . . . .	194
	The second approximation . . . . .	198
	Transformation to the time as independent vari- able . . . . .	207
	Approximate formulae for the perturbations of the coordinates . . . . .	210
	Definitions and determination of the constants . . . . .	213
<i>Chapter VIII.</i>	RESONANCE . . . . .	216
	Elementary theory . . . . .	219
	Solution of a resonance equation . . . . .	222
	General case of resonance in the perturbation problem . . . . .	226
	A general method for treating resonance cases . . . . .	234
	The case $e' = \Gamma = 0$ . . . . .	238
	The 1 : 2 case . . . . .	241
	The cases $e' \neq 0$ . . . . .	246

<i>Chapter IX.</i> THE TROJAN GROUP OF ASTEROIDS	. page	250
The triangular solutions	. . . . .	250
General theory	. . . . .	256
Elimination of the short period terms.	. . . . .	259
Expansion of the disturbing function	. . . . .	261
The equation giving the libration	. . . . .	269
Perturbations of the remaining variables	. . . . .	273
Higher approximations	. . . . .	277
Perturbations by Saturn	. . . . .	280
Indirect perturbations	. . . . .	283
Direct action of Saturn	. . . . .	286
<i>Appendix A.</i> NUMERICAL HARMONIC ANALYSIS	. . . . .	289
<i>Index</i>	. . . . .	301
