## VOLUME II, PART 1

<b>Chapter 7</b>	<b>Disturbing Function</b>	I
	LAPLACE COEFFICIENTS	I
7.1	Definition	I
7.2	Integral Representation	4
7.3	Recurrence Formulas	8
7.4	Derivatives	10
7.5	Numerical Tables	16
	INCLINED CIRCULAR ORBITS	23
7.6	Jacobi's Expansion	23
7.7	Tisserand's Polynomials	28
7.8	Hansen-Tisserand Polynomials	32
7.9	Double Hypergeometric Series	36
	NEWCOMB'S OPERATORS	40
7.10	Newcomb's Expansion	40
7.11	Newcomb's Operators	43
7.12	Poincaré's Recurrence Formulas	47
7.13	Hill's Expansion	51
7.14	Gylden's Expansion	53
7.15	Brown's Expansion	55
	CONVERGENCE CRITERIA	58
7.16	Sundman's Criterion	58
7.17	Sundman's Proof	60
7.18	A Generalization	67
7.19	Poincaré's Criterion	70
7.20	Application of Poincaré's Criterion	73

	RECURRENCE RELATIONS	79
7.21	Recurrence Formulas	79
7.22	Application to the Disturbing Function	84
7.23	Case of Two Circular Orbits	86
	APPROXIMATION TO HIGHER COEFFICIENTS	90
7.24	Method of Darboux	90
7.25	Principle of Darboux's Method	93
7.26	Motion on a Plane	98
7.27	Case of One Circular Orbit	101
7.28	Application of Darboux's Method	108
7.29	Two Elliptic Orbits	112
7.30	Nonexistence of Uniform Integrals	116
<b>Chapter 8</b>	<b>Lagrange's Method</b>	<b>128</b>
	VARIATION OF THE ELEMENTS	128
8.1	Principle of the Method	128
8.2	Form of the Solution	133
8.3	Perturbation of Heliocentric Coordinates	137
8.4	Discovery of Neptune and Pluto	142
8.5	Motion under Resistance	145
8.6	Motion of an Earth Satellite	149
	POISSON'S THEOREM	164
8.7	Equations of Motion	164
8.8	First-Order Perturbation	167
8.9	Second-Order Perturbation	167
8.10	Third- and Higher-Order Perturbation	169
	LAPLACE-LAGRANGE THEORY OF SECULAR PERTURBATION	174
8.11	Classical Theory	174
8.12	Secular Determinant	178
8.13	Laplace-Lagrange Solution	180
8.14	Computations of Stockwell and Brouwer	185
	SECULAR VARIATION OF ASTEROIDAL ORBITS	187
8.15	Formal Solution	187
8.16	Family of Asteroids	190
8.17	Critical Asteroid	193
8.18	Commensurability of Higher Orders	198
	GAUSS'S METHOD	199
8.19	Gauss's Method	199
8.20	Geometrical Transformation	206
8.21	Computation of Doolittle	214
8.22	Halphen-Musen Method	216

	DISCUSSION OF THE LAW OF GRAVITATION	234
8.23	Historical Note	234
8.24	Discussion of Various Laws	236
8.25	Relativistic Theory	243
<b>Chapter 9</b>	<b>Delaunay's Theory</b>	<b>267</b>
	DELAUNAY'S METHOD	267
9.1	Delaunay's Operations	267
9.2	Delaunay's Lunar Theory	275
9.3	Secular Acceleration	280
	THEORY OF LIBRATION	286
9.4	Commensurability of Mean Motions	286
9.5	Poincaré's Theory	287
9.6	Commensurability of the First Rank	291
9.7	Critical Argument	294
9.8	Brown's Theory	300
9.9	Distribution of Asteroids	312
	MOTION OF SATELLITES	328
9.10	Souillart's Theory of Jupiter's Satellites	328
9.11	Saturn's Satellites	337
9.12	Woltjer's Theory of Hyperion	343
9.13	Consideration of Satellite Orbits	348
	BROWN'S TRANSFORMATION	358
9.14	Brown's Transformation	358
9.15	Application of Brown's Transformation to a Stellar Case	364
9.16	Apse-Node Terms	366
	POINCARÉ'S THEORY	370
9.17	Poincaré's Formulation	370
9.18	Small Divisors	377
	VON ZEIPPEL'S THEORY	386
9.19	Von Zeipel's Transformation	386
9.20	Brouwer's Theory of an Artificial Satellite	404
9.21	Garfinkel's Improved Theory	411
9.22	Critical Inclination	422
9.23	Effect of Air Drag	431
9.24	Brouwer's Discussion of the Asteroidal Gaps	440
9.25	Orbit with High Inclination and Eccentricity	447
9.26	Twenty-Four-Hour Earth Satellites	456
9.27	Lunar Orbiter	470
9.28	Von Zeipel's Theory applied to Jupiter's Satellites	473

9.29	General Perturbation with Unspecified Canonical Variables	479
------	---	-----
