

VOLUME II, PART 2

Chapter 10	Absolute Perturbation	505
	COORDINATE PERTURBATION	505
10.1	Perturbation in Rectangular Coordinates	505
10.2	Hill's Method	512
10.3	Brouwer's Method	517
10.4	Strömgren's Method	525
10.5	The Hansen-Tietjen Method	547
	HANSEN'S THEORY	552
10.6	Ideal Coordinates	552
10.7	Hansen's Method of Integration	555
10.8	Motion of the Orbital Plane	560
10.9	Disturbing Function	565
10.10	Musen's Modification of Hansen's Theory	568
10.11	Group Perturbations	591
10.12	Hansen's Method Applied to Comets	594
10.13	Oppolzer's Lunar Theory	599
	NEWCOMB'S THEORY	604
10.14	Laplace's Theory	604
10.15	Newcomb's Equations of Motion	607
10.16	Perturbation in Longitude	612
10.17	Motion of the Orbital Plane	613
	GYLDÉN'S THEORY	617
10.18	Gyldén's Intermediary Orbit	617
10.19	Heuristic Method	618
10.20	Characteristic Terms	624
10.21	Brendel's Modification	631
10.22	Brendel's Lunar Theory	639
	BROWN'S THEORY	644
10.23	Equations of Motion for a Trojan Asteroid	644
10.24	Brown's Intermediary Orbit	648
10.25	Equation for Variation	651
10.26	Planetary Perturbation	655
10.27	Brown's Revised Theory	658
10.28	Brown's Theory of Jupiter's Eighth Satellite	661
10.29	Kovalevsky's Numerical Method	668
	ANDOYER'S THEORY	678
10.30	Andoyer's Lunar Theory	678
10.31	Paloque's Theory of a Trojan Asteroid	683

10.32	Trousset's Theory of J VIII	687
10.33	Roure's Theory of Planets	689
	COMETARY PERTURBATION	695
10.34	Sphere of Activity	695
10.35	Capture of a Comet by Jupiter	703
10.36	The Poincaré-Schwarzschild Theorem	707
10.37	Interplanetary Trajectories	713
10.38	Disintegration of a Comet	734
	BOHLIN'S THEORY	739
10.39	Bohlin's Quintic Equation	739
10.40	Auxiliary Functions	743
10.41	Analytical Expansion	748
	SOLUTION BY LAMBERT'S SERIES	755
10.42	Charlier's Theory	755
10.43	Steffensen's Theory	760
10.44	The Lie Transform	769
10.45	Expansions in Polynomial Series	773
Chapter 11	Hill's Lunar Theory	805
	HILL'S INTERMEDIARY ORBIT	805
11.1	Hill's Equations of Motion	805
11.2	Intermediary Orbit	810
11.3	Variational Curve	816
11.4	Convergence for a Variational Curve	821
	THE MOTION OF PERIGEE AND NODE	849
11.5	Equations for Variations	849
11.6	Terms Depending on m and e	865
11.7	Other Inequalities	870
11.8	Convergence of Hill's Series	877
	THE PLANETARY ACTIONS	880
11.9	Action due to Planets	880
11.10	Inequality due to the Earth's Figure	886
11.11	Adams's Theorem	889
	APPLICATION TO JUPITER'S SATELLITES	905
11.12	Ferraz Mello's Theory	905
	Retrospect of Volume II	921
	Index to Volume II, Part 1 and Volume II, Part 2.	following pp. 504, 921
