VOLUME III, PART 1

Chapter 12	**Differential Equations in Perturbation Theory**	1
	HILL'S EQUATION	1
12.1	Floquet's Theorem	1
12.2	Hill's Equation	10
12.3	Convergence of Hill's Determinant	21
12.4	Application of Hadamard's Theorem	26
	LINDSTEDT'S EQUATION	33
12.5	Lindstedt's Method	33
12.6	Bohlin's Method	41
12.7	Gyldén's Method	50
12.8	Tisserand's Method	66
12.9	Bruns's Method	72
12.10	Lindemann's Discussion	80
12.11	Stieltjes's Discussion	84
12.12	Harzer's Method	88
12.13	Picart's Method	90
	THE MATHIEU EQUATION	96
12.14	Whittaker's Method	96
12.15	The Mathieu Equation	99
12.16	Application to Hill's Equation	110
12.17	Asymptotic Solution of the Mathieu Equation	123
12.18	Number of Zeropoints	140
	THEORY OF SATURN'S RINGS	152
12.19	Ring-Form Equilibrium Figures	152

12.20	Maxwell's Theory	163
12.21	Discussion of Maxwell's Theory	168
12.22	Modern Approach to the Problem	174
12.23	Cassini's and Encke's Divisions	185
	MATRIX METHOD OF INTEGRATION	199
12.24	Baker's Matrix Method of Integration	199
12.25	Hill's Equation in Matrix Method	207
12.26	The Mathieu Equation in Matrix Method	214
12.27	Saturn's Rings	217
12.28	Theory of Libration by Matrix Method	222
12.29	Motion of Rhea	227
12.30	Secular Perturbation of Higher Degree	231
12.31	Stability of a Trojan Asteroid	247
12.32	Motion of Saturn's Satellites	252
12.33	Electron Motion in a Magnetron	258
Chapter 13	**Averaging Method**	283
	THE KRYLOV-BOGOLIUBOV THEORY	283
13.1	The Krylov-Bogoliubov Method	283
13.2	Van der Pol's Equation	295
13.3	The Krylov-Bogoliubov Method and the Poincaré-von Zeipel Method	310
	AVERAGING METHOD	327
13.4	Principle of Averaging Method	327
13.5	Error Estimate of Averaging Method	334
13.6	Perturbations on Stable Orbits	341
13.7	Application to Satellite Motion	351
13.8	Error Estimate of the Approximation	356
13.9	Periodic Solutions of the Earth Satellite Problem (The Hale-Cesari Theory)	363
13.10	Systems with Slow Variation	375
	PERIODIC SURFACE METHOD	405
13.11	Periodic Surfaces	405
13.12	Transformation T of a Periodic Surface into Itself	415
13.13	Existence and Uniqueness of a Periodic Surface	431
13.14	Periodic Surface Applied to Satellite Motion	434
13.15	Modified Coordinates	447
13.16	Periodic Solutions for Satellite Motion (Diliberto's Theory)	461
13.17	Formal Stability in the Three-Body Problem	472

13.18 Qualitative Properties of Satellite Orbits 480
13.19 The Ritz-Galerkin Method 488
13.20 Kruskal's Method 492
