

VOLUME IV, PART 2

Chapter 19	Asymptotic Solutions and Second-Genus Periodic Solutions	553
	CHARACTERISTIC EXPONENTS	553
19.1	Equations for Variations	553
19.2	Characteristic Exponents	559
19.3	Characteristic Exponents of a Canonical System	566
19.4	Expansion of Characteristic Exponents	572
19.5	Characteristic Exponents of the Three-Body Problem	576
19.6	Stability of a Satellite System with Commensurable Mean Motions	585
	ASYMPTOTIC SOLUTIONS	595
19.7	Generalities on Asymptotic Solutions	595
19.8	Asymptotic Solutions of a Canonical System	600
19.9	Discussion on Divergence	605
19.10	Computation of Asymptotic Orbits	612
	SECOND-GENUS PERIODIC SOLUTIONS	622
19.11	Generalities on Second-Genus Periodic Solutions	622
19.12	Sufficient Condition for Extrema	628
19.13	Application to Canonical Systems	645
19.14	Existence of Second-Genus Solutions for a Canonical System	653
19.15	Application of Maupertuis's Principle	663
19.16	Computation of the Solutions	674
19.17	Second Species Periodic Solutions	686
19.18	Doubly Asymptotic Motions	692
Chapter 20	Infinite Nonlinear Analysis	723
	NONLINEAR INTEGRAL EQUATIONS	723
20.1	Linear Integral Equations	723
20.2	Nonlinear Integral Equations	736
20.3	Boundary Value Problem	746
20.4	Oscillation of Saturn's Rings	751
20.5	Problem of N Bodies	761
20.6	Hill's Variational Curve	770

20.7	Existence of Periodic Solutions	784
20.8	Oscillation Problem with Continuous Spectrum	796
	WINTNER'S NONLINEAR INFINITE ANALYSIS	800
20.9	Kernel Transformation	800
20.10	First-Genus Periodic Solutions	806
20.11	Second-Genus Periodic Solutions	810
20.12	Asymptotic Solutions	812
20.13	Application to the Three-Body Problem	817
20.14	Genealogy of Periodic Solutions	828
20.15	Criticism of Poincaré's Sort Theory	836
	DUFFING'S PROBLEM	857
20.16	The Green Function	857
20.17	Solution of Duffing's Problem	861
20.18	Bifurcation Equation	867
20.19	Application to Radiative Transfer Problem	888
Chapter 21	Quasi-Periodic Solutions	903
	BIRKHOFF'S TRANSFORMATION	903
21.1	Complete Stability	903
21.2	Dynamical Systems with Slow Variation	920
21.3	Divergent Series and Singular Points	926
21.4	Extension to Three Dimensions	935
	SIEGEL'S THEORY	949
21.5	Integrals of Canonical System	949
21.6	Normal Form at an Equilibrium Point	962
21.7	Normal Form of Analytic Hamiltonian Systems	974
21.8	Convergence Criterion	983
21.9	Periodic Solutions of Canonical Systems	1000
21.10	Existence of the Second-Genus Periodic Solutions	1013
21.11	Estimation of the Remainder Terms	1024
	QUASI-PERIODIC SOLUTIONS	1040
21.12	Invariant Tori	1040
21.13	Kolmogorov-Arnold's Theorem	1048
21.14	Auxiliary Lemmas	1065
21.15	Fundamental Theorem	1083
21.16	Smoothing Operators	1100
21.17	Stability of the Lagrange Solution	1126
21.18	Rapidly Convergent Iteration Method	1138
21.19	Existence of Quasi-Periodic Solutions	1150

21.20	Convergent Series Expansions for Quasi-Periodic Solutions	1157
21.21	Connection with Lie Algebra	1177
21.22	Application to the Restricted Three-Body Problem	1188
21.23	Arenstorf's Theory	1198
21.24	The Deprit-Henrard Theory of Genealogy of Periodic Solutions	1208

Retrospect of Volume IV 1235

Index to Volume IV, Part 1. and Volume IV, Part 2.
