VOLUME V, PART 1

Chapter 22 Existence of Solutions 1

CONDITIONS FOR COLLISIONS 1

22.1 Singularities of Differential Equations 1
22.2 Conditions for Singularity 6
22.3 Conditions for a Collision in the General Three-Body Problem 18

BINARY COLLISIONS 29

22.4 Case of No Collision 29
22.5 Sundman's Transformations 32
22.6 Sundman's Regularization 40
22.7 Analytic Continuation 45
22.8 Radius of Convergence 58
22.9 Levi-Civita's Regularization 70
22.10 Collisional Orbits 94
22.11 Numerical Evaluation of the Convergence Radius 110
22.12 Imaginary Binary Collisions 125

TRIPLE COLLISIONS 142

22.13 The Weierstrass-Sundman Theorem 142
22.14 Regularizability of a Triple Collision 153
22.15 Asymptotic Behavior of Triple Collisions 159
22.16 The N-Body Problem 180
22.17 Imaginary Triple Collisions 207
22.18 Algebromorphic Functions 214

	BEHAVIOR AT INFINITY	225
22.19	Behavior at Time Infinity	225
22.20	Energy Constant Positive	231
22.21	Energy Constant Zero	248
22.22	Energy Constant Negative	251
22.23	Rectilinear Motions	267
22.24	Behavior at Infinity	281
22.25	Singular Manifolds	289
	PROBLEM OF CAPTURES	302
22.26	Possibility of a Capture	302
22.27	Merman's Criticism to Chazy	309
22.28	Criteria for a Hyperbolic Motion	319
22.29	Criteria for a Hyperbolic-Elliptic Motion	337
22.30	Criteria for a Capture	340
22.31	Birkhoff-Merman's Theorems	356
22.32	Qualitative Study	372
22.33	Transition between Classes of Hyperbolic-Elliptic Motions	395
22.34	Convergence of Sundman's Series	408
Chapter 23	**Theory of Characteristics**	427
	POINCARÉ'S THEORY OF CHARACTERISTICS	427
23.1	Curves defined by Differential Equations	427
23.2	Two-Dimensional Singular Points	430
23.3	Contacts	443
23.4	Antecedents and Consequents	447
23.5	Limit Cycles	450
23.6	Survey of Singular Points	472
23.7	Central Points	496
23.8	Characteristics on a Torus	508
	CHARACTERISTICS IN A HIGHER DIMENSIONAL SPACE	554
23.9	Singularities in Three Dimensions	554
23.10	Closed Curves in Higher Dimensional Space	562
23.11	Poisson's Stability	592
	GEODESICS	603
23.12	General Properties of Dynamical Trajectories	603
23.13	Geodesics on a Surface of Negative Curvature	611
23.14	Geodesics on a Surface $p>1$ of Negative Curvature	622
23.15	Geodesics on a Surface of Genus Zero with Knobs	633
23.16	Geodesics on a Surface of Positive Curvature	638

23.17 Geodesics on a Torus 656
23.18 Fuchsian Groups 664
23.19 Geodesics on a Surface of Arbitrary Genus $p>1$ 677

Chapter 24 Topology of the Manifold of Motion 693

VARIATIONAL PRINCIPLES 693
24.1 Two Degrees of Freedom 693
24.2 Minimal Principle 696
24.3 Minimax Principle 707
24.4 Method of Analytic Continuation 718
24.5 Surface of Section 726

ANALYSIS ISTUS 738
24.6 One-Dimensional Analysis Situs 738
24.7 Two-Dimensional Analysis Situs 744
24.8 N-Dimensional Analysis Situs 751
24.9 Betti Numbers and Coefficients of Torsion 759

FUNCTIONAL TOPOLOGY 767
24.10 Functional Topology 767
24.11 Calculus of Variation in the Large 779
24.12 Periodic Extremals 789
24.13 Deformation Theory 802
24.14 Index Form 810
24.15 Poincaré's Continuation Problem 818
24.16 Rotation Number and Type Number 832

MANIFOLDS OF MOTION 841
24.17 Fundamental Groups 841
24.18 Analysis Situs of the Restricted Three-Body Problem 848
24.19 Topology of the Manifold of States of Motion 859
