

VOLUME V, PART 2

Chapter 25	Surface Transformations	877
	INVARIANT-POINT THEOREM	877
25.1	Last Geometric Theorem of Poincaré	877
25.2	Birkhoff's Proof of Poincaré's Theorem	885
25.3	Birkhoff's Extension of Poincaré's Theorem	896
25.4	Kerékjártó's Proof	904
25.5	Generalization to an s -to-one Transformation	916
25.6	Generalization of Nielsen	924

25.7	Extension to $2N$ -Dimensional Manifolds	932
25.8	Invariant Points in Function Space	940
25.9	Arnold's Extension	954
	APPLICATION TO DYNAMICAL SYSTEMS	958
25.10	Dynamical Role of Poincaré's Theorem	958
25.11	Existence of Periodic Solutions	962
25.12	Billiard Ball Problem	967
25.13	Ring Transformation in the Restricted Three-Body Problem	980
25.14	Existence of Periodic Orbits	1001
25.15	Ejection to Infinity and Exterior Motion	1013
25.16	Existence of Quasi-Periodic Solutions	1030
	SURFACE TRANSFORMATIONS	1033
25.17	Criterion of Instability	1033
25.18	Formal Series	1040
25.19	Invariant Formal Curves	1047
25.20	Hyperbolic Invariant Points	1057
25.21	Elliptic Invariant Points	1065
25.22	Birkhoff's Closed Curves	1077
25.23	Ring of Instability	1098
25.24	Birkhoff's Criterion of Stability	1111
25.25	General Behavior near Invariant Points	1118
25.26	Distribution of Various Solutions	1146
Chapter 26	Ergodic Theorem	1167
	RECURRENT MOTIONS	1167
26.1	Recurrent Motions	1167
26.2	Recurrent Point Groups	1179
26.3	Regional Transitivity	1185
26.4	Central Motions	1188
26.5	Structure of Surface Transformations	1195
26.6	Regular Components of Surface Transformations	1216
26.7	Metrical Transitivity	1225
26.8	Fleeing Points	1241
	ERGODIC THEOREM	1244
26.9	Recurrence Theorem of Poincaré	1244
26.10	Recurrence Theorem of Carathéodory	1252
26.11	Khintchine's Sharpening of Poincaré's Theorem	1254
26.12	Quasi-Ergodic Hypothesis	1258

26.13	Spectral Resolution of Dynamical Systems	1269
26.14	Mean Ergodic Theorem of von Neumann	1274
26.15	Time Average Theorem of Hopf	1285
26.16	Individual Ergodic Theorem of Birkhoff	1299
26.17	Stepanov's Extension	1311
26.18	Invariant Integrals	1317
26.19	Mixture	1331
26.20	Homogeneous Chaos	1342
26.21	Generalization of Ergodic Theorem	1348
	MARKOFF'S CHAIN	1378
26.22	Shuffling of Cards	1378
26.23	Markoff's Chain	1383
26.24	Markoff's Chain and Ergodic Theorem	1396
Chapter 27	Almost Periodic Motions	1423
	EXISTENCE OF MEAN MOTIONS	1423
27.1	Presentation of the Problem	1423
27.2	Bohl's Existence Proof	1427
27.3	Distribution of Numbers Modulo 1	1437
27.4	Weyl's Existence Proof	1446
27.5	Statistical Methods in Diophantine Approximation	1456
27.6	Proof on Asymptotic Distribution Functions	1460
27.7	Generalization of Almost Periodic Functions	1466
27.8	Harmonic Analysis of the Remainder Terms	1468
	ALMOST PERIODIC MOTIONS	1475
27.9	Secular Constant	1475
27.10	Zero-Points of an Analytic Almost Periodic Function	1484
27.11	Almost Periodic Motions on a Circle	1494
27.12	Almost Periodic Motions on a Surface	1500
27.13	Almost Periodic Motions in the Mean	1513
	LIAPOUNOV STABILITY AND ALMOST PERIODIC MOTIONS	1515
27.14	Almost Periodic Recurrent Motions	1515
27.15	Liapounov Stability and Almost Periodic Motions	1522
27.16	Strongly and Weakly Stable Motions	1533

Retrospect of Volume V 1549

Index to Volume V, Part 1, and Volume V, Part 2.
