

# *Contents*

<b>PREFACE TO THE SECOND EDITION</b>	<b>v</b>
<b>CHAPTER 1. AN APPROACH TO ASTROPHYSICS</b>	<b>1</b>
1:1 Channels for Astronomical Information	3
1:2 X-Ray Astronomy: Development of a New Field	5
1:3 The Appropriate Set of Physical Laws	9
1:4 The Formation of Stars	11
1:5 Evolution of Stars	15
1:6 The Abundance of Chemical Elements in Stars and the Solar System	23
1:7 Origin of the Solar System	29
1:8 Formation and Evolution of Galaxies and Clusters	39
1:9 Problems of Life	46
1:10 Unobserved Astronomical Objects	48
<b>CHAPTER 2. THE COSMIC DISTANCE SCALE</b>	<b>53</b>
2:1 Size of the Solar System	53
2:2 Trigonometric Parallax	53
2:3 Spectroscopic Parallax	54
2:4 The Moving Cluster Method	54
2:5 Method of Wilson and Bappu	55
2:6 Superposition of Main Sequences	56
2:7 Brightness of RR Lyrae Variables	58

2:8	Brightness of Cepheid Variables	58
2:9	The Brightness of Novae and HII Regions	59
2:10	Distance–Red-Shift Relation	59
2:11	Seeliger’s Theorem and Number Counts in Cosmology	61
<b>CHAPTER 3.</b>	<b>DYNAMICS AND MASSES OF ASTRONOMICAL BODIES</b>	<b>68</b>
3:1	Universal Gravitational Attraction	68
3:2	Ellipses and Conic Sections	71
3:3	Central Force	73
3:4	Two-Body Problem with Attractive Force	73
3:5	Kepler’s Laws	75
3:6	Determination of the Gravitational Constant	80
3:7	The Concept of Mass	81
3:8	Inertial Frames of Reference—The Equivalence Principle	83
3:9	Gravitational Red-Shift and Time Dilation	84
3:10	Measures of Time	86
3:11	Uses of Pulsar Time	88
3:12	Galactic Rotation	89
3:13	Scattering in an Inverse Square Law Field	90
3:14	Stellar Drag	92
3:15	Virial Theorem	95
3:16	Stability Against Tidal Disruption	97
<b>CHAPTER 4.</b>	<b>RANDOM PROCESSES</b>	<b>104</b>
4:1	Random Events	104
4:2	Random Walk	105

4:3	Distribution Functions, Probabilities, and Mean Values	110
4:4	Projected Length of Randomly Oriented Rods	111
4:5	The Motion of Molecules	114
4:6	Ideal Gas Law	117
4:7	Radiation Kinetics	119
4:8	Isothermal Distributions	120
4:9	Atmospheric Density	121
4:10	Particle Energy Distribution in an Atmosphere	123
4:11	Phase Space	126
4:12	Angular Diameters of Stars	129
4:13	The Spectrum of Light Inside and Outside a Hot Body	130
4:14	Boltzmann Equation and Liouville's Theorem	137
4:15	Fermi-Dirac Statistics	140
4:16	The Saha Equation	143
4:17	Mean Values	144
4:18	The First Law of Thermodynamics	146
4:19	Isothermal and Adiabatic Processes	148
4:20	Formation of Condensations and the Stability of the Interstellar Medium	149
4:21	Ionized Gases and Assemblies of Stars	151

## **CHAPTER 5.      PHOTONS AND FAST PARTICLES** 159

5:1	The Relativity Principle	159
5:2	Relativistic Terminology	160
5:3	Relative Motion	163
5:4	Four-Vectors	168
5:5	Aberration of Light	170

5:6	Momentum, Mass, and Energy	172
5:7	The Doppler Effect	175
5:8	Poynting-Robertson Drag on a Grain	176
5:9	Motion Through the Cosmic Microwave Background Radiation	177
5:10	Particles at High Energies	180
5:11	High Energy Collisions	182
5:12	Faster-Than-Light Particles	183
5:13	Strong Gravitational Fields	186

**CHAPTER 6.      ELECTROMAGNETIC PROCESSES IN SPACE**      190

6:1	Coulomb's Law and Dielectric Displacement	190
6:2	Cosmic Magnetic Fields	192
6:3	Ohm's Law and Dissipation	194
6:4	Magnetic Acceleration of Particles	195
6:5	Ampère's Law and the Relation Between Cosmic Currents and Magnetic Fields	196
6:6	Magnetic Mirrors, Magnetic Bottles, and Cosmic Ray Particles	197
6:7	Maxwell's Equations	200
6:8	The Wave Equation	201
6:9	Phase and Group Velocity	204
6:10	Energy Density, Pressure, and the Poynting Vector	204
6:11	Propagation of Waves Through a Tenuous Ionized Medium	206
6:12	Faraday Rotation	210
6:13	Light Emission by Slowly Moving Charges	213
6:14	Light Scattering by Unbound Charges	220
6:15	Extinction by Interstellar Grains	223
6:16	Absorption and Emission of Radiation by a Plasma	226

6:17 Radiation from Thermal Radio Sources	230
6:18 Synchrotron Radiation	233
6:19 The Synchrotron Radiation Spectrum	236
6:20 The Compton Effect and Inverse Compton Effect	239
6:21 Synchrotron Emission and the Inverse Compton Effect on a Cosmic Scale	243
6:22 The Cherenkov Effect	245

## CHAPTER 7. QUANTUM PROCESSES IN ASTROPHYSICS 251

7:1 Absorption and Emission of Radiation by Atomic Systems	251
7:2 Quantization of Atomic Systems	252
7:3 Atomic Hydrogen and Hydrogenlike Spectra	256
7:4 Spectra of Ionized Hydrogen	264
7:5 Hydrogen Molecules	266
7:6 The Information Contained in Spectral Lines	270
7:7 Selection Rules	273
7:8 Absorption and Emission Line Profile	276
7:9 Quantum Mechanical Transition Probabilities	278
7:10 Stimulated Emission, Coherent Processes, and Blackbody Radiation	285
7:11 Stimulated Emission and Cosmic Masers	288
7:12 Stellar Opacity	291
7:13 Chemical Composition of Stellar Atmospheres—The Radiative Transfer Problem	296

## CHAPTER 8. STARS 303

8:1 Observations	303
8:2 Sources of Stellar Energy	306

8:3	Requirements Imposed on Stellar Models	309
8:4	Mathematical Formulation of the Theory	311
8:5	Relaxation Times	313
8:6	Equation of State	316
8:7	Luminosity	319
8:8	Opacity Inside a Star	321
8:9	Convective Transfer	326
8:10	Nuclear Reaction Rates	329
8:11	Particles and Basic Particle Interactions	332
8:12	Energy Generating Processes in Stars	335
8:13	The Hertzsprung-Russell Diagram and Stellar Evolution	343
8:14	Evidence for Stellar Evolution, as Seen from the Surface Composition of Some Stars	345
8:15	The Possibility of Direct Observations of Nuclear Processes in Stars	350
8:16	The Possibility of Element Synthesis in Objects Exploding from an Initial Temperature of $10^{10}$ °K	352
8:17	Compact Stars	354
8:18	White Dwarf Stars	356
8:19	Neutron Stars and Black Holes	361
8:20	Vibration and Rotation of Stars	366

**CHAPTER 9.    COSMIC GAS AND DUST**    374

9:1	Observations	374
9:2	Strömgren Spheres	382
9:3	Shock Fronts and Ionization Fronts	388
9:4	Formation of Molecules and Grains	394

9:5	Condensation in the Primeval Solar Nebula	397
9:6	Infrared Emission from Galactic Sources	399
9:7	Star Formation	403
9:8	Orientation of Interstellar Grains	405
9:9	Origin of Cosmic Magnetic Fields	413
9:10	Cosmic Ray Particles in the Interstellar Medium	417
9:11	X-Ray Galaxies and Quasars	424

<b>CHAPTER 10.</b>	<b>STRUCTURE OF THE UNIVERSE</b>	<b>431</b>
--------------------	----------------------------------	------------

10:1	Questions about the Universe	431
10:2	Isotropy and Homogeneity of the Universe	432
10:3	Cosmological Principle	434
10:4	Creation of Matter	436
10:5	Homogeneous Isotropic Models of the Universe	437
10:6	Measuring the Geometric Properties of the Universe	441
10:7	Topology of the Universe	451
10:8	Dynamics on a Cosmic Scale	453
10:9	Some Simple Models of the Universe	453
10:10	Olbers's Paradox	458
10:11	Horizon of a Universe	460
10:12	Cosmological Models with Matter and Antimatter	463
10:13	Galaxy Formation	466
10:14	Do the Constants of Nature Change with Time?	473
10:15	The Flow of Time	478

<b>CHAPTER 11.</b>	<b>LIFE IN THE UNIVERSE</b>	<b>486</b>
11:1	Introduction	486
11:2	Thermodynamics of Biological Systems	486
11:3	Organic Molecules in Nature and in the Laboratory	489
11:4	Origins of Life on Earth	491
11:5	Communication and Space Travel	492
<b>CHAPTER 12.</b>	<b>COSMIC ORIGINS</b>	<b>497</b>
12:1	Background Radiation	497
12:2	Background Contributions of Discrete Sources	499
12:3	Cool Expanding Universe	501
12:4	Extrapolating Back to Early Epochs	503
12:5	The Isotropy Problem	507
12:6	The Density Parameter $\Omega$	507
12:7	Hot Exploding Universe	509
12:8	The Flatness Problem	511
12:9	The Planck Era	512
12:10	Inflationary Cosmological Models	514
12:11	The Matter–Antimatter Asymmetry	517
12:12	The Post-Inflationary Stage	517
12:13	The Entropy of the Universe	517
12:14	Early Element Formation	519
12:15	Gravitational Condensation of Matter	523
12:16	Primordial Mass Condensations	524
12:17	Localized Forces and Condensation	524
12:18	Collapse During the Radiation-Dominated Era?	528
12:19	Dark Matter	530
12:20	The Jeans Criterion	533

12:21 Star Formation	534
12:22 Triggered Collapse	535
12:23 Energy Dissipation	537
12:24 Cooling of Dense Clouds by Grain Radiation	540
12:25 Condensation in the Early Solar Nebula	543
12:26 The Evidence Provided by Meteorites	546
12:27 Formation of Primitive Condensates in the Early Solar Nebula	551
12:28 Formation of Planetesimals	552

<b>EPILOGUE</b>	560
-----------------	-----

<b>APPENDIX A. ASTRONOMICAL TERMINOLOGY</b>	561
---	-----

A:1 Introduction	561
A:2 The Sun	562
A:3 The Solar System	563
A:4 Stellar Systems and Galaxies	567
A:5 Brightness of Stars	571
A:6 Classification of Stars	578
A:7 The Distribution of Stars in Space and Velocity	586
A:8 Pulsars, Radio Stars, and X-Ray Sources	587
A:9 Quasars and Quasistellar Objects (QSO's)	591
A:10 Photons and Cosmic Ray Particles	593

<b>APPENDIX B. ASTROPHYSICAL CONSTANTS</b>	594
--	-----

B:1 Physical Constants	594
B:2 Astronomical Constants	594

<b>LIST OF REFERENCES</b>	596
---------------------------	-----

<b>INDEX</b>	613
