LIST OF FIGURES		xv
LIST OF TABLES		xvii
1. INTRODUCTION		1
<p style="margin-left: 2em;">New motivation for looking at an old problem • Gravitational collapse and the issue of the final state • A survey of this report</p>		
2. MASS-ENERGY ON A SPACELIKE HYPERSURFACE OF TIME SYMMETRY		11
<p style="margin-left: 2em;">Hypotheses accepted in general relativity • Geometrodynamics in brief • Time symmetry • Geomrostatics: mass-energy on a spacelike hypersurface of time symmetry; and a look behind the scene</p>		
3. HYDROSTATIC EQUILIBRIUM AND EXTREMAL MASS-ENERGY		16
<p style="margin-left: 2em;">The theorem • Relation of the variational treatment to Tolman’s field-theoretical derivation of the equation of equilibrium: introduction to an extended discussion • The relativistic generalization of the gravitational potential and its observational significance • Case of compensating redshift and blueshift • The constancy of the injection energy • Correspondence between neutron star and statistical atom model • Natural and unique definition of the potential $\exp(\nu/2)$ only for equilibrium configurations • The sense in which the gravitational potential $\exp(\nu/2)$ does and does not appear in the variational analysis • The space in which each point represents one configuration • The Zel’dovich sequence</p>		
4. CENTRAL DENSITY AND THE REGENERATION OF PRESSURE		26
<p style="margin-left: 2em;">Monotonic fall of pressure and density in an equilibrium configuration • The sense in which pressure is and is not self-regenerative • “Central crush”</p>		
5. DENUMERABLE INFINITY OF CRITICAL MASSES		30
<p style="margin-left: 2em;">Theorem on damped oscillations • Details of proof: three zones; and the scaling law which applies in the first two zones • Proof of Theorem 9 continued: theory of small perturbations applicable in Zones II and III • Phase transition excluded for simplicity • Theory of oscillations about limiting configuration in Zone II • Details of proof of Theorem 9 continued: fitting Zone II to Zone I • Conservation of normalized “area in phase space” in “propagation” of static oscillation from interior to surface • Final step in proof of damped oscillations: effect on surface of perturbations in interior</p>		

6. MASS AND RADIUS OF EQUILIBRIUM CONFIGURATIONS: 1932–1964 42
 Landau's pioneering analysis • The Chandrasekhar limit • The cold neutron star of Oppenheimer and Volkoff • Inverse beta-decay; a universal equation of state; the final revelation of the first point of instability; the 1964 Harrison-Wakano-Wheeler curves
7. THEORY OF THE STABILITY OF EQUILIBRIUM CONFIGURATIONS 50
 The frequency of the acoustical modes of spherical symmetry • Zel'dovich on solutions with energy excess • Einstein on solutions with energy excess • A geon as a third example of a solution with energy excess • Three kinds of system with energy excess: a comparison and contrast • Baryons added and baryons taken away in repeated cycles to "pump up" the central density and the excess energy to maximum values • Stabilization required to reach unstable configurations • The coupled rates of change of $M^*(\rho_0)$ and $A(\rho_0)$ • Infinite dimensional configuration space and neutral stability • The contrasting stability of the two branches of $M^*(A)$ • Changes in stability diagnosed by changes in radius • Final survey of the changes in stability • Quantitative analysis of rate of change of stability at critical point • Present stability analysis compared and contrasted with one that makes detailed calculations of frequencies • Why more modes become unstable as the central density rises
8. NO ESCAPE FROM COLLAPSE 69
 Four reasons for considering configurations of uniform density • Separation of long- and short-range forces; the "slide rule" • Volume-density relation for uniform configurations of specified total mass-energy • The slide rule, its use, and the interpretation of the results • Continuous sequence of configurations with fixed A but mass-energy going to zero • No barrier to collapse of a suprasolar mass • Collapse barrier for substellar systems • Not technologically feasible to put in enough energy to push a substellar mass over the barrier • The barrier falls at big A and low A and has a maximum at intermediate A
9. EQUATION OF STATE OF COLD, CATALYZED MATTER 83
 The end point of thermonuclear evolution • Symmetry against $A \rightarrow -A$ • Electrical neutrality • Definition of neutrino neutrality • The final state when A is small • An aside on $A = 5$, $A = 8$, and fluctuations in geometry • The regime of scallops in the over-all packing fraction • New type of periodicity for A of order of 10^4 and more • The long-range forces begin to affect local conditions when $A \sim 10^{50}$ ("compression") • Frame in which flow of baryons and flow of energy both vanish • The universal character of the equation of state • Pressure but no shearing stress • Three ways to give operational meaning to the energy density • Limitation on curvature or density at which the concept of equation of state makes sense • An aside: universe sharply curved as viewed from fast particle • The function $\rho(n)$ as a thermodynamic potential • Alternative choices for the thermodynamic potential • Baryon number as deduced from pressure and density measurements • γ -law in the relativistic and non-relativistic domains: comparison and contrast • γ one or greater for stability against the collapse of matter • γ two or less for consistency with causality • The soft "hard core"

10. THE HARRISON-WHEELER EQUATION OF STATE	108
Equation in form of table of values and analytical fits to them • Derivation: region up to 10^4 atmospheres • Feynman, Metropolis, and Teller from 15 g/cm^3 to 10^4 g/cm^3 • Chandrasekhar from 10^4 g/cm^3 to 10^7 g/cm^3 • Separated nuclei in beta-equilibrium with a relativistic electron gas: $\sim 10^7 \text{ g/cm}^3$ to $\sim 4 \times 10^{12} \text{ g/cm}^3$ • Regime of stabilized neutron drip • Mixture of ideal electron, proton, and neutron Fermi gases from $\rho = 4.54 \times 10^{12} \text{ g/cm}^3$ to 10^{15} g/cm^3 , and from 10^{15} g/cm^3 to the highest densities; alternatives	
11. GRAVITATIONAL COLLAPSE—TO WHAT?	124
Curvature nearly to closure the theme of the analysis • Time symmetry and collapse from infinity reconciled • Geometric description of collapse of cloud of dust: the Friedmann region • Geometric description of collapse of cloud of dust: the Schwarzschild region • A two-dimensional model for the Schwarzschild geometry at a moment of time symmetry • The nature of time in general relativity • The evolution of the Schwarzschild geometry with time • The two connected quasi-Euclidean spaces deformed to a “cylinder” • Join between Schwarzschild and Friedmann geometries • Connection between the dynamics of collapse and the analysis of momentarily static configurations • A spacelike slice characterized by an arbitrarily specified value of the mass-energy • Segment of opening $\chi_1 > \chi_0$ slicing through the Friedmann 4-geometry • How reconcile a changing mass-energy with a constant mass-energy? • Potential and kinetic energy related to intrinsic and extrinsic curvature • Gravitational collapse as a model for the study of the dynamics of the universe • Communication to outside cut off • For whom the bell tolls • New quantum aspects of collapse • Obstacles to defining and applying the law of conservation of baryons • Barrier penetration for $A \sim A_{\text{crit}}$ • Barrier penetration for $A \ll A_{\text{crit}}$ but $A > A_{\text{quantum}}$ • An elementary particle transformation • Baryon appearance and the one-sidedness of matter • Observable at normal density?	
APPENDICES	
A. NUMERICAL INTEGRATION OF THE GENERAL-RELATIVITY EQUATION OF HYDROSTATIC EQUILIBRIUM: METHODS AND RESULTS	149
B. THEORY OF THE STABILITY OF EQUILIBRIUM CONFIGURATIONS: DERIVATION FROM ENERGY CONSIDERATIONS	156
Motivation • Outline of the analysis • Details of the analysis—calculation of the mass to second order • Necessary and sufficient condition for stability • Equations of motion and normal modes	
C. VARIATIONAL TECHNIQUE TESTED IN NON-RELATIVISTIC DOMAIN ON POLYTROPES	163
AUTHOR INDEX	167
