

Contents

1. General Introduction	1
1.1 Introduction and General Summary	1
1.2 Explanation of Some Fundamental Concepts	4
1.3 Light-Curves and Periods	14
1.4 Julian Date and the Expression of Dates and Times	19
1.5 Nomenclature of Variable Stars	21
2. Pulsating Variables	26
2.1 Classical Pulsating Stars	26
2.1.1 Historical Summary and Classification	26
2.1.2 δ Cephei and W Virginis Stars	27
2.1.3 RR Lyrae Stars	39
2.1.4 δ Scuti Stars	50
2.2 Slowly-Varying, Pulsating Stars	54
2.2.1 Mira Stars	54
2.2.2 Semiregular, Irregular and RV Tauri Stars	68
2.3 Non-Radial Pulsators	73
2.3.1 β Cephei Stars	73
2.3.2 ZZ Ceti Stars	76
3. Eruptive Variables	79
3.1 Eruptive Binaries	80
3.1.1 Cataclysmic Variables – a Summary	80
3.1.2 Novae	82
3.1.3 U Geminorum Stars	98
3.1.4 AM Herculis Stars or Polars	104
3.1.5 Properties and Models of Cataclysmic Variables	105
3.1.6 Symbiotic Stars	122
3.1.7 X-Ray Binaries	131
3.2 Supernovae	145
3.3 Stars at an Extremely Early Stage of Evolution	155
3.3.1 Historical	155
3.3.2 T Tauri Stars and Related Objects	155
3.3.3 Flare Stars	171
3.4 Hot Variables with Extended Shells	175
3.4.1 S Doradus-Type Variable Supergiants	175
3.4.2 γ Cassiopeiae Stars	178

3.4.3	Variability in Planetary Nebulae or Their Central Stars	181
3.5	R Coronae Borealis Stars	184
3.6	γ -Ray Bursters	188
3.7	Other Types of Object	189
3.7.1	BY Draconis Stars and Similar Objects	189
3.7.2	Pulsars	193
3.7.3	α^2 Canum Venaticorum (Magnetic) Stars.	195
4.	Eclipsing Stars	198
4.1	General	198
4.2	Geometrical Properties.	199
4.3	Classification	200
4.4	Analysis of the Light-Curve	203
4.5	Period Changes	205
4.5.1	Periodic Changes	205
4.5.2	Non-Periodic Changes	208
4.6	Statistics	209
4.7	Some Interesting Eclipsing Systems	210
4.8	Concluding Remarks on the Evolution of Close Binary Systems	220
5.	Supplement to the Classification	221
5.1	Variables in Clusters.	221
5.1.1	Open Clusters	221
5.1.2	Globular Clusters	222
5.2	Variables in Extragalactic Systems.	226
5.2.1	Magellanic Clouds	226
5.2.2	Other Extragalactic Systems	231
5.3	Active Galaxies	233
5.3.1	General	233
5.3.2	Seyfert Galaxies.	236
5.3.3	Quasars	238
5.3.4	BL Lacertae Objects.	238
6.	The Discovery of Variable Stars	241
6.1	Basic Considerations	241
6.2	Methods and Instruments	244
6.3	The Theory of Discovery Probability	248
6.4	Determination of Discovery Probability from Given Light-Curves	252
6.5	Comparison of Theoretical and Empirical Discovery Probabilities – The Influence of Observer and Method	254
6.6	Discovery Statistics	257
6.7	Preliminary Designations of Variable Stars	259

7. The Significance of Variable Stars for Research on the Structure of the Galaxy and Stellar Evolution.	261
7.1 Methods	261
7.2 Results	263
7.3 The Galactic Halo	270
7.4 Remarks on the Evolution of the Galaxy.	273
8. Observational Methods and Organizations	274
8.1 Observations	274
8.1.1 Photometric Observations	274
8.1.2 Spectrographic and Other Observations	285
8.1.3 Bright Variables	286
8.1.4 Amateur Collaboration	288
8.2 Organization	290
9. Literature	293
9.1 Brief Notes About Stellar Catalogues and Atlases	293
9.2 General Summaries, Compilations and Review Articles.	295
9.3 References	299
Subject Index	315
Star Index	323
