

Contents

Preface	ix
1 Positions of stars	1
1.1 The coordinate system	1
1.2 Direction of the Earth's rotation axis	3
1.3 Visibility of the sky	4
2 Proper motions of stars	7
3 Distances of nearby stars	9
3.1 The distance of the sun	9
3.2 Trigonometric parallaxes of stars	11
4 The brightnesses of the stars	13
4.1 The apparent magnitudes	13
4.2 The colors of the stars	14
4.3 Correction for the absorption of radiation in the Earth's atmosphere	16
4.4 The black body	21
4.5 The solar radiation	26
4.6 The absolute magnitudes of stars	28
5 Color magnitude diagrams	31
5.1 Color magnitude diagrams of nearby stars	31
5.2 Color magnitude diagrams for open clusters	33
5.3 Color magnitude diagrams for globular clusters	36
5.4 Photometric parallaxes for star clusters	38
5.5 Photometric parallaxes for single stars	39
6 The luminosities of the stars	41
6.1 Fluxes, luminosities and angular radii	41
6.2 The luminosity of the sun	43
6.3 Luminosities of stars and bolometric magnitudes	44

7	Angular radii of stars	49
7.1	The problem	49
7.2	The Michelson interferometer	50
7.3	The Hanbury Brown interferometer	53
7.4	Angular diameters from lunar occultations	58
8	Effective temperatures of stars	63
8.1	General discussion	63
8.2	The solar surface flux and effective temperature	64
8.3	Effective temperatures of stars	65
9	Masses and radii of stars	67
9.1	General discussion of binaries	67
9.2	The Doppler effect	70
9.3	Radial velocities and masses of binaries	71
9.4	Determination of orbital parameters for binaries	75
9.5	Data for stellar masses, radii, and effective temperatures	84
9.6	The mass–luminosity relation	85
10	Spectral classification	89
10.1	The spectral sequence	89
10.2	Luminosity classification	95
10.3	White dwarf spectra	97
11	Understanding stellar spectra	99
11.1	The solar spectrum	99
11.2	Line identification	100
11.3	Understanding the spectral sequence	100
12	Population II stars	107
13	Stellar rotation	111
14	Stellar magnetic fields	117
14.1	General discussion	117
14.2	The Zeeman effect	117
15	Stars with peculiar spectra	127
15.1	General discussion	127
15.2	Peculiar A stars, or magnetic stars	127
15.3	Diffusion in stars	136
15.4	Metallic line stars, or Am stars	140

15.5	Barium stars	144
15.6	T Tauri stars	147
16	Pulsating stars	153
16.1	The different types of pulsating stars	153
16.2	The δ Cephei stars	156
16.3	The RR Lyrae stars	159
16.4	The period–luminosity relation	161
17	Explosive stars	165
17.1	Supernovae	165
17.2	Novae	183
18	Our sun	193
18.1	Introduction	193
18.2	The surface of the sun	193
18.3	The outer layers of the sun	197
18.4	The active sun	204
19	Interstellar absorption	213
19.1	Introduction	213
19.2	The interstellar dust	213
19.3	The interstellar gas	227
Appendices		231
<i>A. Problems</i>		231
<i>B. Some important astronomical quantities</i>		237
References		239
Index		243
