

CONTENTS

FOREWORD	vii
PREFACE	ix
1 GENERAL INTRODUCTION	1
1.1 Historical Perspective	1
1.2 Discovery	3
1.3 Appearance	4
1.4 Statistics	5
1.5 Importance	7
1.6 Brightness	7
1.7 Main Characteristics	11
1.8 An Overall View	18
Problems	21
References	21
2 DYNAMICS	22
2.1 Orbital Elements	22
2.2 Orbit in Space	24
2.2.1 Relevant equations	24
2.2.2 Orbital elements from position and velocity	28
2.2.3 Orbital elements from observations	30
Problems	33
References	33
3 PHYSICAL ASPECTS	34
3.1 Black Body Radiation	34
3.2 Perfect Gas Law	36
3.3 Dissociative Equilibrium	36
3.4 Doppler Shift	37
3.5 Spectroscopy	38
3.5.1 Atomic spectroscopy	38
3.5.2 Molecular spectroscopy	40
3.6 Isotope Effect	44
3.7 Franck-Condon Factors	45
3.8 Intensity of Emitted Lines	46
3.9 Boltzmann Distribution	50
3.10 Λ -doubling	50

3.11	Solar Radiation	51
3.12	Solar Wind	54
	Problems	55
	Reference	55
4	SPECTRA	56
4.1	Main Characteristics	56
4.2	Forbidden Transitions	65
4.3	Line-to-Continuum Ratio	67
	Problems	68
	References	68
5	SPECTRA OF COMA	69
5.1	Fluorescence Process	69
5.1.1	Rotational structure	71
5.1.2	Vibrational structure	75
5.1.3	Case of C ₂ molecule	78
5.1.4	Molecules other than diatomic	85
5.1.5	OH radio lines	86
5.1.6	Oxygen lines	88
5.1.7	Forbidden transitions	88
5.2	Excitation Temperature	89
5.2.1	Rotational temperature	89
5.2.2	Vibrational temperature	91
5.3	Abundances of Heavy Elements	91
5.4	Isotopic Abundances	94
	Problems	98
	References	98
6	GAS-PRODUCTION RATES IN COMA	100
6.1	Theoretical Models	100
6.1.1	From the total luminosity	100
6.1.2	From surface brightness distribution	104
6.1.3	From number densities	109
6.2	Results	112
6.2.1	OH and H	112
6.2.2	CN, C ₂ , C ₃ , CH, NH ₂ , CO	116
6.2.3	CS, S ₂	122
6.2.4	Ions	122
6.2.5	Complex molecules	123
6.2.6	O, C, N, S	126
6.3	Analysis of Lyman α Measurements	130
6.4	Gas-phase Chemistry in the Coma	135
6.5	Parent Molecules	144
6.6	Summary	147
	Problems	148
	References	148

7	DUST TAIL	150
7.1	Dynamics	150
7.2	Anti-tail	159
7.3	Icy-halo	159
	Problems	160
	References	161
8	LIGHT SCATTERING THEORY	162
8.1	Mie Scattering Theory	162
8.1.1	Efficiency factors	162
8.1.2	Albedo	165
8.1.3	Scattered intensity	165
8.1.4	Polarization	166
8.2	Approximate Expressions	167
8.3	Computation of Cross Sections	167
8.4	Results	169
8.5	Particles of Other Types	172
	Problems	175
	References	176
9	THE NATURE OF THE DUST PARTICLES	177
9.1	Visible Continuum	177
9.2	Gas-to-Dust Ratio	181
9.3	Polarization	182
9.4	Infrared Measurements	185
9.4.1	Anti-tail	192
9.5	Spectral Feature	194
9.5.1	Silicate signature	194
9.5.2	Ice signature	195
9.6	Albedo of the Particles	196
9.6.1	Visual region	196
9.6.2	Ultraviolet region	197
9.7	Continuum Emission in the Radio Region	198
9.8	Radiation-Pressure Effects	198
9.9	Summary	199
	Problems	200
	References	201
10	ION TAILS	203
10.1	Evidence for the Solar Wind	203
10.2	Dynamical Aberration	204
10.3	Wind-sock Theory	208
10.4	Theoretical Considerations	210
10.5	Large Scale Structures	216
10.5.1	Tail rays or streamers	216
10.5.2	Knots or condensations	218

10.5.3	Oscillatory structure	218
10.5.4	'Swan-like' feature	219
10.5.5	Bend in the tail	220
10.5.6	Disconnection events	221
	Problems	223
	References	224
11	NUCLEUS	225
11.1	Theory of Vaporization	225
11.2	Velocities in the Coma	229
11.3	Albedo and Radius	230
11.4	Chemical Composition	232
11.5	Mass loss	233
11.6	Structure	233
11.7	Non-gravitational Forces	236
	Problems	241
	References	242
12	ORIGIN	243
12.1	Evidence for the Oort Cloud	243
12.2	Evolution of Orbits	245
12.3	Origin of the Oort Cloud	249
	Problems	253
	References	254
13	RELATION TO OTHER SOLAR SYSTEM STUDIES	255
13.1	Asteroids and Meteorites	255
13.2	Meteor Streams	256
13.3	Particles Collected at High Altitudes	259
13.4	Primordial Material	260
13.5	Chemical Evolution	260
	Problems	261
	References	261
14	PROBLEMS AND PROSPECTS	263
14.1	Epilogue	263
14.2	Comet Halley	265
	Problems	269
	INDEX	271
