

Table of Contents

| | |
|--|-----------|
| 1. INTRODUCTION | 1 |
| <i>Leo Goldberg</i> | |
| 1. Historical Basis of Modern Solar Research | 2 |
| 1.1. Early Visual Observations | 3 |
| 1.2. Early Observations with the Spectroscope | 4 |
| 1.3. Eclipse Observations | 5 |
| 2. The Hale-Mount Wilson Era | 7 |
| 2.1. Spectra of Sunspots and Limb | 8 |
| 2.2. Magnetic Fields in Sunspots | 10 |
| 2.3. General Magnetic Field | 11 |
| 2.4. Evershed Effect | 12 |
| 2.5. Circulation of the Calcium Chromosphere | 13 |
| 2.6. Wave Lengths, Pressure, and Limb Effects | 13 |
| 3. Recent Developments | 15 |
| 4. Fundamental Solar Constants | 17 |
| 4.1. Mass and Parallax | 17 |
| 4.2. Diameter, Density, Surface Gravity | 18 |
| 4.3. Effective Temperature | 18 |
| 4.4. Stellar Magnitude | 19 |
| 4.5. Rotation | 19 |
| 5. The Problems of Solar Physics | 22 |
| 5.1. Structure of the Solar Atmosphere | 22 |
| 5.2. The Fraunhofer Spectrum | 25 |
| 5.3. Hydrodynamics and Hydromagnetics | 27 |
| 5.4. Solar Activity and Solar-terrestrial Relations | 29 |
| References | 32 |
| 2. THE SUN AS A STAR | 36 |
| <i>Bengt Strömgren</i> | |
| 1. Introduction | 36 |
| 2. The Fundamental Equations Governing the Structure of the Solar Interior | 39 |
| 3. Physical Properties of Matter in the Solar Interior | 42 |
| 3.1. Mean Molecular Weight | 42 |
| 3.2. Opacity | 46 |
| 3.3. Adiabatic Gradient | 49 |
| 3.4. Energy Production through Thermonuclear Processes | 50 |

TABLE OF CONTENTS

| | |
|--|-----------|
| 4. The Solar Interior, General Discussion | 64 |
| 4.1. Outer Part | 64 |
| 4.2. The Criterion for Convective Instability | 66 |
| 4.3. Central Region | 68 |
| 5. Models of Solar Interior | 70 |
| 5.1. Different Types of Models | 70 |
| 5.2. Homology Transformations | 72 |
| 5.3. Numerical Results | 75 |
| 5.4. The Extent of the Convection Zones | 76 |
| 6. Chemical Composition of the Solar Interior | 78 |
| 7. Mixing of Matter in the Solar Interior | 81 |
| 8. Effects of Accretion and Loss of Mass by Corpuscular Radiation through the Lifetime of the Sun | 83 |
| 9. Evolution of the Sun | 83 |
| References | 85 |
| 3. THE PHOTOSPHERE | 88 |
| <i>M. Minnaert</i> | |
| 1. The Continuous Radiation of the Photosphere | 88 |
| 1.1. Introduction | 88 |
| 1.2. The Solar Constant | 90 |
| 1.3. Integrated Flux at Surface of Photosphere | 91 |
| 1.4. Monochromatic Flux at Surface of Photosphere, πF_λ ; Energy-Wave-Length Curve | 91 |
| 1.5. Monochromatic Intensity, Photospheric Radiation in Normal Direction, $I_\lambda(0)$ | 93 |
| 1.6. Distribution of Radiance over Sun's Disk; Monochromatic Intensity in Different Directions, $I_\lambda(\vartheta)$ | 96 |
| 1.7. Deviations from Central Symmetry of Radiation Field | 101 |
| 1.8. Polarization | 102 |
| 1.9. Other Data on Solar Radiation | 102 |
| 2. Theory of the Continuous Radiation | 102 |
| 2.1. Empirical Investigation of Radiation in Photosphere; Empirical Models | 102 |
| 2.2. Theoretical Photospheric Models | 107 |
| 2.21. Theoretical Model 1 | 108 |
| 2.22. Theoretical Model 2 | 108 |
| 2.23. Remark on the Solution of the Equation of Transfer | 111 |
| 2.24. Theoretical Model 3 | 112 |
| 2.25. Theoretical Model 4 | 115 |
| 2.3. Comparison between Empirical and Theoretical Models | 123 |
| 2.4. The Blanketing Effect | 124 |
| 2.5. Solar Model in Deeper Layers; Convection Zone | 125 |
| 2.6. Adopted Photospheric Model | 126 |
| 2.7. Far-ultraviolet Spectrum | 128 |
| 2.8. The Sharp Solar Limb | 129 |

TABLE OF CONTENTS

xi

| | |
|--|-----|
| 3. Theory of the Fraunhofer Lines | 130 |
| 3.1. Formation of Fraunhofer Lines | 130 |
| 3.2. Total Absorption in an Optically Thin Layer | 135 |
| 3.3. Broadening of Fraunhofer Lines | 137 |
| 3.31. Doppler Effect of Thermal Motions | 137 |
| 3.32. Turbulent Motions of the Solar Gases | 137 |
| 3.33. Radiation Damping | 137 |
| 3.34. Collision Damping | 138 |
| 3.35. Pressure Broadening | 140 |
| 3.36. Hyperfine Structure and Isotope Effect | 141 |
| 3.4. The Combination of Different Broadening Mechanisms | 142 |
| 3.5. The Calculation of Line Profiles for Simplified Photospheric Models | 143 |
| 3.6. Detailed Calculation of a Line Profile | 147 |
| 3.7. The Central Intensity of Fraunhofer Lines | 149 |
| 3.8. The Equivalent Widths of Fraunhofer Lines | 150 |
| 3.81. Empirical Curves of Growth | 150 |
| 3.82. Theoretical Curves of Growth | 153 |
| 3.9. Results Derived from Curves of Growth | 157 |
| 3.91. The Excitation | 157 |
| 3.92. The Ionization | 158 |
| 3.93. Turbulence and the Kinetic Temperature | 158 |
| 3.94. Line Broadening and the Damping Constant | 159 |
| 3.95. Abundances of the Elements in the Photosphere | 159 |
| 3.10. Results Derived from Study of Selected Lines | 163 |
| 3.11. Molecular Bands in the Solar Spectrum | 165 |
| 3.12. Absence of Polarization in Fraunhofer Lines | 167 |
| 3.13. Wave-Length Displacements of Fraunhofer Lines | 167 |
| 4. The Granulation | 168 |
| 4.1. Turbulence Spectrum of Photosphere | 175 |
| References | 177 |
| 4. THE IDENTIFICATION OF SOLAR LINES | 186 |
| <i>Charlotte E. Moore</i> | |
| 1. Wave Lengths of Solar Lines | 186 |
| 2. Identification of Solar Lines | 190 |
| References | 205 |
| 5. THE CHROMOSPHERE AND THE CORONA | 207 |
| <i>H. C. van de Hulst</i> | |
| 1. Introduction and History | 207 |
| 2. Scale of Heights and Scale Height | 209 |
| THE CHROMOSPHERE | 212 |
| 3. The Structure of the Chromosphere | 212 |
| 4. The Flash Spectrum | 216 |

TABLE OF CONTENTS

| | |
|--|------------|
| 5. Photometric Data and Self-absorption | 220 |
| 6. The Temperature of the Low Chromosphere | 222 |
| 7. Metal Lines and Chemical Composition | 226 |
| 7.1. The Metal Lines | 226 |
| 7.2. Chemical Composition | 231 |
| 8. The Balmer Lines | 231 |
| 9. A Table of Density and Pressure in the Chromosphere | 236 |
| 9.1. The Lower Chromosphere | 237 |
| 9.2. The Upper Chromosphere | 242 |
| 9.3. Conclusion | 243 |
| 10. Visual Continuum and Far-ultraviolet Spectrum | 244 |
| 10.1. The Observable Continuum | 244 |
| 10.2. The Far-ultraviolet Spectrum | 246 |
| 10.3. Helium Lines and Related Subjects | 249 |
| 11. Heating and Support of the Chromosphere | 250 |
| 11.1. Selective Mechanisms | 250 |
| 11.2. Theories Based on Mass Motions | 251 |
| 11.3. Theories Based on Pressure Waves or Related Types of Motion | 252 |
| 11.4. Conclusion | 253 |
| THE CORONA | 255 |
| 12. Recent Investigations of the Corona | 255 |
| 13. Color and Continuous Spectrum; Elimination of the <i>F</i> Component | 257 |
| 14. Photometry and Polarization of the White Corona; Electron Densities | 259 |
| 15. Emission Lines: Identification and Photometry | 267 |
| 15.1. Identification | 267 |
| 15.2. Photometry | 269 |
| 16. The Temperature of the Corona | 272 |
| 16.1. The Density Gradient of the Corona | 273 |
| 16.2. Width of the Emission Lines | 273 |
| 16.3. The Ionization | 275 |
| 16.4. Conclusion | 277 |
| 17. Excitation and Chemical Composition | 278 |
| 18. Zonal Structure and Changes with the Solar Cycle | 284 |
| 18.1. Direct Photographs of the Corona | 285 |
| 18.11. Relation with Prominences and Solar Cycle | 288 |
| 18.12. Projection Effects | 289 |
| 18.2. The Emission Lines | 290 |
| 19. Structural Details and Motions of the Corona | 293 |
| 19.1. Structure Seen in Emission Lines | 293 |
| 19.11. Emission Regions | 293 |
| 19.12. Coronal Condensations | 294 |
| 19.2. Structure Seen on Direct Photographs | 295 |
| 19.21. Fans (or Helmets) | 296 |

TABLE OF CONTENTS

xiii

| | |
|--|------------|
| 19.22. Arch]Systems | 298 |
| 19.23. Rays and Bushes above Faculae | 298 |
| 19.24. Rays over Undisturbed Regions | 298 |
| 19.3. Motions in the Corona | 300 |
| 19.4. Conclusion; Emission Lines and Continuous Light | 301 |
| 20. Energy and Mass Balance of the Corona | 302 |
| 20.1. The Corona as a Collection of Streamers | 302 |
| 20.2. The Corona as a Quiet Atmosphere of High Temperature | 304 |
| 20.3. Evaporation and the Electric Field | 306 |
| 20.4. Accretion of Interstellar Gas | 311 |
| 20.5. Conclusion | 313 |
| References | 314 |
| 6. SOLAR ACTIVITY | 322 |
| <i>K. O. Kiepenheuer</i> | |
| Introduction | 322 |
| 1. Sunspots | 323 |
| 1.1. Wolf's Sunspot Numbers | 323 |
| 1.2. The Sunspot Cycle | 330 |
| 1.3. Distribution of Sunspots in Latitude | 335 |
| 1.4. N-S Asymmetry of Sunspot Activity | 336 |
| 1.5. Distribution of Spot Groups in Longitude | 338 |
| 1.6. The Single Spot and the Spot Group | 340 |
| 1.61. Development of a Spot Group | 340 |
| 1.62. Structure, Geometry, and Orientation of a Spot Group | 344 |
| 1.63. Internal Motions of Sunspots | 347 |
| 1.7. Proper Motion of Sunspots | 348 |
| 1.8. The Magnetic Field of Sunspots | 352 |
| 1.81. Measurement and Classification | 352 |
| 1.82. The Law of Polarity | 355 |
| 1.83. Magnetic Properties of Single Spots | 355 |
| 1.84. Magnetic Life-History of a Sunspot | 360 |
| 1.85. Magnetic Flux in Spot and Spot Group | 361 |
| 1.9. General Magnetic Field of the Sun | 361 |
| 2. Faculae | 365 |
| 2.1. Photospheric Faculae | 368 |
| 2.2. Fine Structure and Photometry | 370 |
| 2.3. Chromospheric Faculae | 371 |
| 2.4. Theoretical Comments | 375 |
| 3. Chromospheric Flares | 376 |
| 3.1. Observational Material | 376 |
| 3.2. Classification | 377 |
| 3.3. Development of a Flare | 378 |
| 3.4. Statistical Relation to Sunspots | 379 |
| 3.5. Relations to Single Spots | 380 |

TABLE OF CONTENTS

| | |
|--|-----|
| 3.6. Ejection of Flare Surges | 385 |
| 3.7. Influence of Flares and Spots on Existing Filaments | 386 |
| 3.8. Spectroscopic Results | 390 |
| 3.81. Asymmetry of the $H\alpha$ Emission Line | 392 |
| 3.82. Continuous Spectrum | 392 |
| 3.9. Other Radiations | 393 |
| 3.91. L- α Emission | 393 |
| 3.92. Corpuscular Emission | 393 |
| 3.93. Emission of Cosmic Rays | 393 |
| 3.94. Continuous Emission (Visible and UV) | 393 |
| 3.95. Radio-Frequency Emission | 393 |
| 4. Prominences (Filaments) | 394 |
| 4.1. Fine Structure of the Chromosphere | 394 |
| 4.2. Form and Dimension of Prominences | 395 |
| 4.3. Latitude Distribution of Prominences (Filaments) | 395 |
| 4.4. Filaments and Spots | 401 |
| 4.5. Prominence (Filament) Development | 404 |
| 4.51. Initial Stages | 404 |
| 4.52. Geometry of Spots and Filaments | 404 |
| 4.53. Filaments outside Spot Groups | 405 |
| 4.54. Filaments and Faculae | 405 |
| 4.55. Further Development of Filaments | 406 |
| 4.6. Sudden Disappearances ("Disparitions brusques") | 408 |
| 4.7. Change of Form and Solar Rotation; Poleward Migration | 415 |
| 4.8. Terminal Phases of Prominences | 416 |
| 4.9. Prominences Associated with Sunspots | 416 |
| 4.10. Prominences and Corona | 417 |
| 4.10.1. Relation to the White Corona | 417 |
| 4.10.2. Prominences and Coronal-Line Emission | 422 |
| 4.11. Theoretical Comments | 429 |
| 4.12. The Concept "Center of Activity" | 432 |
| 5. Solar Corpuscular Emission | 437 |
| 5.1. Introduction | 437 |
| 5.2. Observational Evidence of Solar Corpuscles | 437 |
| 5.21. Balmer Lines in Aurorae | 437 |
| 5.22. Ionizing Effects of Corpuscles | 438 |
| 5.23. Comet Tails and Coronal Rays | 439 |
| 5.24. Solar Radio Emission | 440 |
| 5.25. Spectroscopic Detection | 441 |
| 5.26. Conclusions from Geomagnetic Observations | 441 |
| 5.3. Correlation of Geomagnetic Storms with Solar Phenomena | 442 |
| 5.31. Correlation with Sunspots | 442 |
| 5.32. Traveling Time of Storm-generating Corpuscles | 444 |
| 5.33. Twenty-seven-Day Recurrence Tendency in Geomagnetic Storms | 445 |
| 5.34. Correlation of M Disturbances with Solar Phenomena | 447 |
| 5.35. Magnetic Activity and Green Corona (λ 5303) | 448 |

TABLE OF CONTENTS

| | |
|--|-----|
| | xv |
| 5.4. The Emission of Corpuscles | 449 |
| 5.41. Flare Effects | 449 |
| 5.42. Nature of the M Regions | 450 |
| 5.43. The Penetration Depth of Solar Corpuscles into the Earth's Atmosphere | 450 |
| 6. The Solar Component of Cosmic Rays | 451 |
| 6.1. Flare Effects | 451 |
| 6.2. The Slowly Variable Solar Component of Cosmic Rays | 455 |
| 6.3. Solar Acceleration Mechanisms | 456 |
| Bibliography and References | 459 |
| 7. SOLAR RADIO EMISSION | 466 |
| <i>J. L. Pawsey and S. F. Smerd</i> | |
| 1. Introduction | 466 |
| 2. Theory of Generation and Propagation of Radio Waves in the Solar Atmosphere | 469 |
| 2.1. Distinctive Features | 469 |
| 2.2. Ray Trajectories | 469 |
| 2.3. Absorption | 474 |
| 2.4. Emission | 475 |
| 2.5. The Transfer of Radiation | 476 |
| 2.6. Polarization | 477 |
| 2.7. A Specification of the Solar Atmosphere in Terms of Frequencies | 477 |
| 3. General Features of Solar Radio Waves | 477 |
| 4. Thermal Radiation from the Quiet Sun | 481 |
| 4.1. General | 481 |
| 4.2. The "Uniform Temperature" Case | 482 |
| 4.3. The "Unity Refractive-Index" Case | 487 |
| 4.4. Recognition of the Thermal Component | 489 |
| 4.5. Comparison between Theory and Observation | 490 |
| 4.51. Apparent Temperature | 490 |
| 4.52. Brightness Distribution | 491 |
| 4.53. Disk Size | 494 |
| 4.54. The General Magnetic Field | 494 |
| 5. The Slowly Varying Component | 495 |
| 5.1. Observational | 495 |
| 5.11. From Apparent Temperature Measurements | 495 |
| 5.12. From Eclipse Observations | 497 |
| 5.13. From Interferometer Distributions | 499 |
| 5.2. Interpretation | 499 |
| 6. Noise Storms (Enhanced Radiation) | 502 |
| 6.1. Time and Wave-Length Variation | 502 |
| 6.2. Region of Origin | 504 |
| 6.3. Criterion for Occurrence of Noise Storms | 505 |

| | |
|---|------------|
| 6.4. Polarization | 505 |
| 6.5. Some Physical Implications | 507 |
| 7. Outbursts and Corpuscular Streams | 508 |
| 7.1. Spectral Observations | 509 |
| 7.2. Directional Observations | 511 |
| 7.3. Physical Implications | 514 |
| 8. Isolated Bursts | 516 |
| 8.1. Observations | 518 |
| 8.2. Interpretation | 519 |
| 9. Mechanisms of Origin of Solar Radio Waves | 521 |
| 9.1. Microscopic Emission | 521 |
| 9.2. Macroscopic Oscillations | 522 |
| 10. Conclusion | 527 |
| Bibliography and References | 528 |
| 8. SOLAR ELECTRODYNAMICS | 532 |
| <i>T. G. Cowling</i> | |
| 1. Introduction | 532 |
| 1.1. Fundamental Equations | 532 |
| 1.2. Motion of Charged Particles | 535 |
| 1.3. Currents in the Presence of a Magnetic Field | 535 |
| 1.4. The Conductivity | 538 |
| 1.5. Induction Drag | 539 |
| 1.6. Polarization | 543 |
| 1.7. Decay of Solar Magnetic Fields | 544 |
| 1.8. Hydromagnetic Waves | 546 |
| 2. Rotation | 550 |
| 2.1. Isorotation | 550 |
| 2.2. Meridian Circulation | 551 |
| 2.3. Viscosity and Rotation | 554 |
| 2.4. Magnetic Fields and Circulation | 557 |
| 3. The General Magnetic Field | 557 |
| 3.1. Thermal and Pressure Theories | 558 |
| 3.2. Dynamo Theories | 560 |
| 3.3. Turbulent Magnetic Fields | 561 |
| 4. Sunspots | 565 |
| 4.1. Convective and Hydrodynamic Theories | 565 |
| 4.2. Magnetic Cooling | 569 |
| 4.3. Alfvén's Theory | 572 |
| 4.4. Other Theories of the Field | 575 |
| 4.5. Summary and Conclusions | 577 |
| 5. Electromagnetic Heating and Solar Flares | 579 |
| 5.1. Coronal Heating | 579 |
