

# Table of Contents

<b>1. DIMENSIONS AND ROTATION</b> . . . . .	1
<i>Sir Harold Spencer Jones</i>	
1. Historical . . . . .	1
2. Geodetic Data . . . . .	4
3. Clairaut's Formula for Gravity . . . . .	6
4. The Theory of Clairaut Developed to the Second Order . . . . .	8
5. Distribution of Density within the Earth . . . . .	12
6. The Derivation of the Ellipticity of the Earth . . . . .	14
7. The Mass of the Earth . . . . .	18
8. The Ratio of the Mass of the Earth to the Mass of the Sun . . . . .	20
9. The Rotation of the Earth . . . . .	23
9.1. Slow Secular Increase in the Length of the Day . . . . .	24
9.2. Irregular Fluctuations in the Length of the Day . . . . .	28
9.3. Seasonal Changes in the Length of the Day . . . . .	33
10. Astronomical Time and Uniform Time . . . . .	37
References . . . . .	39
<b>2. DYNAMICS OF THE EARTH-MOON SYSTEM</b> . . . . .	42
<i>Sir Harold Jeffreys</i>	
1. Precession and Nutation . . . . .	42
2. The Variation of Latitude . . . . .	44
3. Effects of a Liquid Core . . . . .	45
4. Observations of the Free Period . . . . .	46
5. The Annual Motion and the Random Disturbance . . . . .	48
6. Dynamical Ellipticities of the Moon . . . . .	48
7. Figure of the Earth . . . . .	50
8. Tidal Friction . . . . .	52
References . . . . .	56

<b>3.</b>	<b>THE INTERIOR OF THE EARTH</b> . . . . .	<b>57</b>
	<i>Sir Edward Bullard</i>	
1.	Introduction . . . . .	57
2.	Seismology . . . . .	57
2.1.	Instruments . . . . .	57
2.2.	Propagation of Elastic Waves . . . . .	59
2.3.	Near-Earthquakes and Explosions . . . . .	61
2.4.	The 20° Discontinuity . . . . .	75
2.5.	The Core . . . . .	76
2.6.	The Inner Core . . . . .	79
2.7.	Other phases . . . . .	79
2.8.	Variation of Velocity with Depth . . . . .	82
2.9.	Deep-Focus Earthquakes . . . . .	86
2.10.	The Absorption of Energy . . . . .	86
2.11.	Energy of Earthquakes . . . . .	87
3.	Properties of the Interior . . . . .	88
3.1.	Density Distribution . . . . .	88
3.2.	Ellipticity . . . . .	95
3.3.	Elastic Constants, Pressure, and Gravity . . . . .	95
3.4.	Earth Tides and the Rigidity of the Core . . . . .	95
4.	Materials in the Interior of the Earth . . . . .	101
5.	Heat Flow and Radioactivity . . . . .	105
5.1.	Observed Heat Flow . . . . .	105
5.2.	Radioactivity of Rocks . . . . .	107
5.3.	The Temperature inside the Earth . . . . .	110
5.4.	Volcanic Heat . . . . .	120
5.5.	Convection in the Mantle . . . . .	122
6.	The Earth's Magnetic Field . . . . .	123
6.1.	Description of the Field . . . . .	123
6.2.	Origin of the Magnetic Field . . . . .	127
	References . . . . .	130
<b>4.</b>	<b>THE DEVELOPMENT AND STRUCTURE OF THE CRUST</b> . . . . .	<b>138</b>
	<i>J. Tuzo Wilson</i>	
1.	Introduction . . . . .	138
2.	Sources of Information . . . . .	140
3.	The Great Features of the Crust . . . . .	142
4.	Ocean Basins . . . . .	144
5.	Continental Shelves and Coastal Plains . . . . .	149
6.	Rates of Erosion, Deposition, and Volcanism . . . . .	150

7. Mountain and Island Arcs . . . . .	152
7.1. The Two Active Belts of Folded Mountains and Island Arcs . . . . .	152
7.2. The Primary Elements or Arcs . . . . .	152
7.21. Single Island Arcs . . . . .	154
7.22. Double Island Arcs . . . . .	155
7.23. Double Mountain Arcs . . . . .	155
7.24. Single Mountain Arcs . . . . .	158
7.25. Fractured Arcs . . . . .	159
7.3. Cycle of Evolution and Stages of Primary Arcs . . . . .	159
7.4. Types of Junctions of Primary Arcs . . . . .	161
7.41. Single-Fracture Systems . . . . .	161
a) Linkages . . . . .	161
b) Common Deflections . . . . .	162
c) Capped Deflections . . . . .	162
7.42. Double-Fracture Systems or Fractured Deflections . . . . .	162
7.43. Reversal Zones . . . . .	164
7.44. Other Junctions . . . . .	164
7.5. Secondary Elements or Arcs . . . . .	164
7.6. The Characteristic Cross-section of an Orogenetic Belt . . . . .	166
8. The Nature of the Orogenetic Process . . . . .	167
8.1. Orogenetic Process Proposed To Explain Primary Arcs . . . . .	170
8.2. A Possible Explanation of the Observed Types of Junctions of Arcs . . . . .	174
8.21. Single-Fracture Junctions . . . . .	175
8.22. Double-Fracture Junctions . . . . .	175
8.3. Some Irregularities and Their Proposed Explanations . . . . .	175
8.31. Different Locations of Epicenters of Deep and Shallow Earthquakes near Japan . . . . .	175
8.32. <i>En Échelon</i> Structure, an Example of the Superposition of Compression and Tension Forces . . . . .	177
8.33. An Explanation of the Fractured Arcs . . . . .	177
8.34. Transcurrent Faults along Arcs . . . . .	177
8.35. Rift Valleys and Linear Island Chains . . . . .	179
8.36. Sporadic Timing of Orogenetic Activity . . . . .	180
9. Descriptions of Some Orogenetic Belts . . . . .	182
9.1. The Present Belts . . . . .	182
9.11. North American Arcs . . . . .	182
9.12. The South American Arcs . . . . .	183
9.13. The East Asian Arcs . . . . .	184
9.14. The South Eurasian–Melanesian Belt . . . . .	185
9.15. The South Eurasian Arcs . . . . .	185
9.16. The Melanesian Fractured Arcs. . . . .	186
9.17. The Celebes Junction of Belts . . . . .	187
9.2. Older, Inactive Mountains and Shields . . . . .	187
9.3. The Inactive Appalachian Mountains . . . . .	188

9.4. The Pre-Cambrian Shields . . . . .	189
9.5. The Origin and Classes of Igneous Rocks . . . . .	201
10. Conclusion . . . . .	204
References . . . . .	207
<b>5. OCEANOGRAPHY . . . . .</b>	<b>215</b>
<i>H. U. Sverdrup</i>	
1. The Ocean Basins . . . . .	215
2. The Water of the Oceans . . . . .	219
2.1. The Salt Content of Sea Water . . . . .	219
2.2. Density of Sea Water . . . . .	220
2.3. Some Thermal Properties of Sea Water . . . . .	220
2.4. The Characteristics of the Sea in Regard to Radiation . . . . .	221
2.5. Eddy Viscosity, Conductivity, and Diffusivity . . . . .	225
3. The Heat Budget of the Oceans . . . . .	227
3.1. General . . . . .	227
3.2. Processes of Radiation . . . . .	229
3.3. Exchange of Heat between the Ocean and the Atmosphere . . . . .	231
3.4. Evaporation . . . . .	232
3.5. Heat Transport by Ocean Currents . . . . .	235
4. The Deep-Water Circulation of the Oceans . . . . .	236
5. The Currents within the Upper Layers of the Oceans . . . . .	243
5.1. The Equations of Motion . . . . .	243
5.2. The Pressure Field . . . . .	244
5.3. Computation of Currents . . . . .	245
5.4. The Pure Wind Current . . . . .	248
5.5. Piling-Up of Water by Wind . . . . .	250
5.6. General Relation between Winds and Currents . . . . .	251
5.7. Minor Features . . . . .	255
6. Interaction between Atmosphere and Ocean . . . . .	255
References . . . . .	256
<b>6. THE GEOCHEMISTRY OF THE CRUST . . . . .</b>	<b>258</b>
<i>Brian Mason</i>	
1. The Geochemical Structure of the Earth . . . . .	258
2. The Geochemical Classification of the Elements . . . . .	262
3. The Composition of the Crust . . . . .	264
4. The Initial Geochemical Differentiation of the Crust . . . . .	266
5. The Geochemistry of Magmatic Processes . . . . .	270
6. The Geochemistry of Sedimentary Processes . . . . .	282

7. The Geochemistry of Metamorphic Processes . . . . .	290
8. The Geochemical Cycle . . . . .	293
References . . . . .	297
<b>7. THE ATMOSPHERE UP TO 30 KILOMETERS . . . . .</b>	<b>299</b>
<i>Horace R. Byers</i>	
1. Composition and Heat Balance of the Atmosphere . . . . .	299
1.1. Composition of the Atmosphere . . . . .	300
1.2. Radiation Balance . . . . .	301
2. Distribution of Temperature . . . . .	307
2.1. Comparison with Adiabatic Equilibrium . . . . .	311
