

# Table of Contents

<b>1.</b>	<b>PLANET EARTH AS SEEN FROM SPACE</b>	<b>1</b>
	<i>S. Fritz and H. Wexler</i>	
1.	Introduction	1
2.	Land	2
2.1.	Coastlines	2
2.2.	Snow-covered Mountains	4
2.3.	Sunlit Coastal Areas	5
2.4.	Miscellaneous Terrain Features	5
3.	Clouds	6
3.1.	Large-Scale Cyclones	7
3.2.	Meso-Scale Cloud Patterns	9
3.3.	Summary	10
	References	10
<b>2.</b>	<b>THE TRANS-NEPTUNIAN PLANET SEARCH</b>	<b>12</b>
	<i>Clyde W. Tombaugh</i>	
1.	Early Investigations of Trans-Neptunian Planets	12
2.	Early Work at Lowell Observatory	13
3.	The Large Survey	14
3.1.	The Telescope	14
3.2.	The Method of Search	15
3.3.	Checking "Planet Suspects"	16
3.4.	The Discovery of Pluto	18
3.5.	Pattern of Sky Coverage	20
3.6.	Search Belt to Eighteenth Magnitude	22
3.7.	Completion of Main Program	22
3.8.	By-Products of Planet Search	23
3.9.	General Comments and Statistics of the Survey	23
3.91.	Area and Overlap	23
3.92.	Number of Stars	24
3.93.	Time Required for Examination	24
3.94.	Uniformity of the Search	24
3.95.	Dimensions of Discoverable Planets	25
4.	Possible Extension to the Twentieth Magnitude	26
	Addendum	28
	References	30

<b>3.</b>	<b>ORBITS AND MASSES OF PLANETS AND SATELLITES</b>	<b>31</b>
	<i>Dirk Brouwer and G. M. Clemence</i>	
1.	Introduction	31
2.	The System of Astronomical Constants	33
2.1.	Comments on the Adopted Values of the Fundamental Constants	38
2.2.	Unit of Distance	41
3.	General Character of Planetary Motions	42
3.1.	Numerical Solutions	44
3.2.	Analytic Solutions	45
3.3.	Perturbations of Long Period	47
3.4.	Secular Perturbations	48
4.	Determination of Planetary Masses	54
4.1.	Determination of Planetary Masses from Planetary Motions	54
4.2.	Determination of Planetary Masses from the Scale of Satellite Orbits	55
4.3.	Masses of the Planets	57
4.31.	Mercury	57
4.32.	Venus	58
4.33.	The Earth-Moon System	58
4.34.	Mars and the Minor Planets	60
4.35.	Jupiter	60
4.36.	Saturn	62
4.37.	Uranus	63
4.38.	Neptune	63
4.39.	Pluto	64
5.	Satellite Systems	65
5.1.	The Disturbing Functions	66
5.2.	Dynamical Constants of Planets Derived from Satellite Motions	70
5.21.	The Satellites of Mars	71
5.22.	The Fifth Satellite of Jupiter	71
5.23.	The Inner Satellites of Saturn	73
5.24.	The Satellites of Uranus	74
5.25.	The Satellites of Neptune	75
5.3.	Solar Perturbations on Satellites	77
5.4.	The Orbits of Iapetus and of the Satellites of Mars	80
5.41.	The Orbit of Iapetus	80
5.42.	The Satellites of Mars	81
5.5.	Mutual Perturbations among Satellites	82
5.51.	Jupiter's Galilean Satellites	82
5.52.	Librations among the Satellites of Saturn	84
5.53.	The Orbit of Rhea	86
5.6.	The Mass of Triton	87
5.7.	Secular Accelerations and Retardations	87
	References	90

<b>4.</b>	<b>THE STABILITY OF THE SOLAR SYSTEM</b>	<b>95</b>
	<i>Yusuke Hagihara</i>	
1.	Theory of Perturbation	96
	References	101
2.	Poisson's Theorem on the Invariability of Semimajor Axes	101
	References	105
3.	The Laplace-Lagrange Theory of the Secular Perturbation in Eccentricities and Inclinations	105
	References	109
4.	Theory of Libration	111
	References	119
5.	Stability of Satellite Systems and the Rings of Saturn	121
	References	125
6.	The Integrals of Planetary Theory	126
	References	131
7.	Periodic Solutions and Characteristic Exponents	133
	References	138
8.	Secular Stability and Temporary Stability	140
	References	144
9.	Topological Theory; Ergodic Theorem; Almost-Periodic Motion and Stability	145
	References	155
<b>5.</b>	<b>PLANETARY INTERIORS</b>	<b>159</b>
	<i>Rupert Wildt</i>	
1.	Survey of the Problem	159
1.1.	Astronomical Evidence	160
1.2.	Equilibrium Configurations of Planets	162
1.3.	Unstable Planetary Configurations	165

References. . . . .	245
<b>7. PHOTOMETRY OF LUNAR ECLIPSES . . . . .</b>	<b>249</b>
<i>D. Barbier</i>	
1. Introduction . . . . .	249
2. Methods of Observation . . . . .	251
2.1. General Remarks . . . . .	251
2.2. Visual Photometry . . . . .	252
2.3. Photoelectric Photometry . . . . .	253
2.4. Photographic Photometry . . . . .	253
2.5. Photographic Spectrophotometry . . . . .	253
3. Theory . . . . .	255

4. Interpretation of the Observations . . . . .	265
4.1. Photometric Observations . . . . .	265
4.2. Spectrophotometric Observations . . . . .	266
4.3. Brightness of the Eclipse . . . . .	269
5. Conclusions . . . . .	269
References . . . . .	270
<b>8. PHOTOMETRY AND COLORIMETRY OF PLANETS AND SATELLITES . . . . .</b>	<b>272</b>
<i>Daniel L. Harris</i>	
1. Introduction . . . . .	272
2. Standard System of Magnitudes and Colors . . . . .	272
3. The Sun . . . . .	275
4. Magnitudes of the Planets . . . . .	276
4.1. Introduction . . . . .	276
4.2. Magnitudes of Individual Planets . . . . .	277
4.21. Mercury . . . . .	277
4.22. Venus . . . . .	278
4.23. The Earth . . . . .	278
4.24. Mars . . . . .	278
4.25. Jupiter . . . . .	280
4.26. Saturn . . . . .	282
4.27. Uranus . . . . .	283
4.28. Neptune . . . . .	285
4.29. Pluto . . . . .	286
4.3. Summary of the Photometric Data on the Planets . . . . .	286
5. Magnitudes and Colors of the Satellites . . . . .	288
5.1. Introduction . . . . .	288
5.2. The Moon . . . . .	288
5.3. The Satellites of Mars . . . . .	289
5.4. The Satellites of Jupiter . . . . .	289
5.41. Jupiter I . . . . .	290
5.42. Jupiter II . . . . .	291
5.43. Jupiter III . . . . .	292
5.44. Jupiter IV . . . . .	292
5.45. The Other Satellites . . . . .	293
5.5. The Satellites of Saturn . . . . .	294
5.51. Satellite I, Mimas . . . . .	294
5.52. II, Enceladus . . . . .	294
5.53. III, Tethys . . . . .	294
5.54. IV, Dione . . . . .	294
5.55. V, Rhea . . . . .	294
5.56. VI, Titan . . . . .	294
5.57. VII, Hyperion . . . . .	295
5.58. VIII, Iapetus . . . . .	295

5.6. The Satellites of Uranus . . . . .	297
5.7. The Satellites of Neptune . . . . .	297
5.71. Satellite I, Triton . . . . .	297
5.72. II, Nereid . . . . .	297
5.8. Summary of Satellite Magnitudes . . . . .	297
6. Color Measurements . . . . .	299
6.1. The Sun . . . . .	299
6.2. The Planets . . . . .	299
6.3. The Satellites . . . . .	302
6.4. Observations of the Planets and Satellites in the Infrared . . . . .	305
7. Albedos of the Planets and Satellites . . . . .	306
7.1. Introduction . . . . .	306
7.2. The Geometric Albedos of the Planets . . . . .	307
7.3. The Bond Albedos of the Planets . . . . .	308
7.4. Albedos of the Satellites . . . . .	309
8. Theoretical Limb Darkening, Phase Variations, and Albedos . . . . .	311
8.1. Introduction . . . . .	311
8.2. Definitions . . . . .	311
8.3. The Principle of Reciprocity . . . . .	312
8.4. Planets with Optically Thick Atmospheres . . . . .	313
8.5. Limb Darkening, Optically Thick Atmospheres . . . . .	314
8.51. Theory . . . . .	314
8.52. Limb Darkening of the Major Planets . . . . .	315
8.6. Variation with Solar Phase Angles and the Bond Albedo . . . . .	317
8.61. The Phase Variation of Venus . . . . .	319
