

Table of Contents

1.	THE 200-INCH HALE TELESCOPE	1
	<i>I. S. Bowen</i>	
	1. Optics	2
	2. Telescope Tube	7
	3. Observer's Cage	8
	4. Yoke	9
	5. Drive and Control	10
	6. The Dome	12
	7. Auxiliary Equipment	12
	Bibliography	13
 2.	 THE LICK OBSERVATORY 120-INCH TELESCOPE	 16
	<i>W. W. Baustian</i>	
	1. Optics and Tube	16
	2. Telescope Drive and Support	18
	3. Building and Facilities	20
	4. Mirror Support	21
	5. Observer's Cage	22
	6. The Coudé Focus	22
	7. Controls and Auxiliary Equipment	23
 3.	 DESIGN OF REFLECTING TELESCOPES	 25
	<i>A. B. Meinel</i>	
	1. Reflecting Telescopes	25
	1.1. Introduction	25
	1.11. f -Ratio	25
	1.12. Mounting	27
	1.2. Asymmetrical Class	28
	1.21. The Kitt Peak National Observatory 36-Inch Telescope	28
	1.22. The McDonald 82-Inch Telescope	28
	1.23. Other Modern Telescopes, Asymmetrical Class	28
	1.3. Symmetrical Class	30
	1.31. The Kitt Peak National Observatory 84-Inch Telescope	30
	1.32. The Mount Wilson-Palomar Symmetrical Telescopes	33
	1.33. Other Modern Telescopes, Symmetrical Class	34
	2. Mirror Materials	34
	2.1. Dielectric Mirror Materials	34

2.11. Pyrex	34
2.12. Fused Quartz or Silica	34
2.13. Pyroceram	35
2.2. Metal-Mirror Materials	36
2.21. Beryllium	36
2.22. Titanium	37
2.23. Aluminum Alloys	37
2.24. Kanogen	37
3. Mirror-Support Systems	38
3.1. Cellular Designs	42
References	42
4. SCHMIDT CAMERAS	43
<i>I. S. Bowen</i>	
1. Aberrations of a Schmidt Camera	44
1.1. Properties of a Spherical Mirror	44
1.2. Design of the Corrector Plate	45
1.3. Chromatic Aberration	45
1.4. Off-Axis Aberrations	47
1.5. Aberrations Caused by Lack of Collimation	49
1.6. Correction of Chromatic Aberration for Limited Regions of the Spectrum	50
1.7. Field Flatteners	52
1.8. Vignetting	53
2. Methods of Figuring and Adjustment	53
3. Modifications of the Schmidt Camera	54
4. Modifications of the Schmidt Cameras for Spectrographs	57
4.1. Solid-Block and Thick-Mirror Schmidt Cameras	57
4.2. Schmidt Aplanatic Sphere Camera	58
4.3. Twice-through Corrector Plates	58
5. Designs of Schmidt Cameras	59
5.1. Optical Design of Schmidt Cameras for Direct Photography	59
5.2. Mechanical Design	59
References	60
5. TELESCOPE DRIVING MECHANISMS	62
<i>R. R. McMath and O. C. Mohler</i>	
1. Introduction	62
2. Gravity Drives	64
3. Electric-Motor Drives	68
4. Variable-Rate Drives	69
5. Photoelectric Guiding	75
References	76
Bibliography	77

6.	THE TRANSIT CIRCLE	80
	<i>C. B. Watts</i>	
1.	Introduction	80
2.	Design	80
3.	Observations	82
4.	Auxiliary Apparatus	85
	References	87
7.	THE PHOTOGRAPHIC ZENITH TUBE AND THE DUAL-RATE MOON-POSITION	
	CAMERA	88
	<i>W. Markowitz</i>	
1.	Introduction	88
2.	The Photographic Zenith Tube	88
2.1.	History	88
2.2.	Theory	91
2.3.	Construction and Operation	92
2.4.	Formation of Images	96
2.5.	Determination of Time	98
2.6.	Scale Value	100
2.7.	The PZT Catalogue	100
2.8.	PZT Adjustments	101
2.81.	Azimuth	101
2.82.	Reversal	102
2.83.	Level	103
2.84.	Focus	103
2.85.	Nodal Point	103
2.9.	Sources of Error	104
3.	The Dual-Rate Moon Camera	107
3.1.	History	107
3.2.	Principles of Operation	108
3.3.	Design of Camera	110
3.31.	Frequency	111
3.32.	Drive Arm	111
3.33.	Orientation	111
3.34.	Tilt Drive	111
3.35.	Tilt Axis	111
3.4.	Optical Displacement	111
3.5.	Measurement and Reduction	112
3.6.	Probable Errors	113
3.7.	Dual-Rate Satellite Camera	114
	References	114
8.	THE IMPERSONAL ASTROLABE	115
	<i>A. Danjon</i>	
1.	Introduction	115
2.	Design and Construction	115

3. Performance and Accuracy	121
4. Comparison with the Transit Instrument	125
5. Analysis of Observations	128
6. Conclusions	136
References	137
9. ASTRONOMICAL SEEING	138
<i>J. Stock and G. Keller</i>	
1. Introduction	138
1.1. Definitions	138
1.2. Seeing	138
1.3. Scintillation	139
1.4. The Source of Seeing and Scintillation	139
2. Seeing	140
2.1. General Remarks	140
2.2. The Aperture Effect	141
2.3. The Physical Constitution of Turbulent Zones	141
2.4. Light-Distribution in the Seeing Image	142
2.5. Seeing and Meteorological Phenomena	143
3. Methods for Systematic Seeing Observations	144
3.1. Stationary Equipment	144
3.11. Image Diameters for Telescopes of Large Aperture	144
3.12. Image-Motion Estimates	144
3.13. Photographic Trails	145
3.14. Observations through Two Apertures	145
3.2. Methods for Field Tests	145
3.21. Resolution of the Diffraction Pattern	145
3.22. Image Motions	146
3.23. Interferometer-Type Instruments	146
4. Design of Instruments To Minimize Seeing Effects	146
5. Scintillation	148
5.1. General Remarks	148
5.2. Shadow Patterns	149
5.3. Spectrum of the Fourier Components of the Shadow Pattern	149
5.4. Aperture Effects	150
5.5. Relative Effects of Scintillation Fluctuations and Shot-Noise Fluctuations	150
5.6. The Physical Constitution of the Turbulent Zone and Its Relation to the Shadow Pattern	151
5.7. The Frequency Spectrum of Scintillation	152
5.8. Scintillation and Meteorological Phenomena	152
References	153

10.	ASTRONOMICAL SEEING AND OBSERVATORY SITE SELECTION	154
	<i>A. B. Meinel</i>	
1.	Astronomical Seeing	154
1.1.	Introduction	154
1.2.	Quantitative Seeing Studies	155
1.3.	Seeing, Limiting Magnitude, and Telescope Size	158
1.4.	Color Effects in Seeing	159
1.5.	Experimental Location of Seeing Disturbances	159
1.6.	Effects of Moist Air	161
1.7.	Dome Seeing	161
2.	Observatory Site Selection	162
2.1.	Introduction	162
2.2.	Seeing	162
2.21.	Measurement of Seeing, Photoelectric	162
2.22.	Measurement of Seeing, Visual	166
2.23.	Measurement of Seeing, Photographic	167
2.24.	Ground Effects on Seeing Measures	167
2.25.	Microthermal Seeing	168
2.3.	Climate	170
2.31.	Climatological Site Factors	170
2.32.	Dendroclimatology	170
2.4.	Atmospheric Effects	172
2.41.	Atmospheric Circulation	172
2.42.	Thermal Profiles	172
2.43.	Vapor Trails and Cirrus	172
2.44.	Jet Stream	173
2.45.	Air Pollution	173
2.46.	Haze	173
2.47.	Sky Darkness	174
2.48.	City Effects	175
	References	175
11.	RADIO TELESCOPES	176
	<i>J. G. Bolton</i>	
1.	Introduction	176
2.	Interferometers	177
2.1.	General Principles	177
2.2.	Phase Switching and Elimination of Background	178
2.3.	Fringe Swinging	180
2.4.	Double Interferometers	181
2.5.	Confusion in Interferometry	182
3.	Large Arrays	182
3.1.	Aim of Arrays	182
3.2.	The Mills Cross	183

3.3. The Christiansen Cross	186
3.4. The Nançay Multielement Interferometer	187
3.5. The Ohio State Telescope	188
3.6. Aperture Synthesis.	190
4. Steerable Reflectors	192
4.1. Necessity of Steerable Reflectors	192
4.2. Design Criteria	192
4.21. Surface Accuracy	193
4.22. Focal Ratio and Feed Support	193
4.23. The Mounting	193
4.3. The Naval Research Laboratory 50-Foot Reflector	194
4.4. The Netherlands 83-Foot Reflector	195
4.5. The German 83-Foot Reflector	197
4.6. The Jodrell Bank 250-Foot Reflector	197
4.7. The George R. Aggasiz 60-Foot Reflector (Harvard)	199
4.8. The Carnegie Institution of Washington 85-Foot Reflector	200
4.9. The California Institute of Technology 90-Foot Reflectors	201
4.10. The Proposed Associated Universities' 140-Foot Reflector	202
4.11. The Proposed Australian 230-Foot Reflector	203
5. Future Radio Telescopes	205
6. Major Radio Telescopes	207
6.1. List of Major Radio Telescopes Excluding Steerable Reflectors	207
6.2. List of Major Radio Telescopes of the Steerable Reflector Type	208
References	209
12. RADIO-ASTRONOMY RADIOMETERS AND THEIR CALIBRATION	210
<i>F. D. Drake</i>	
1. Introduction	210
2. Standard Radiometer Configurations	213
2.1 The Direct Radiometer	213
2.2. The Direct-Current Comparison Radiometer	214
2.3. The Dicke Radiometer	216
2.4. The Switched-Frequency Radiometer	219
3. Radiometer Sensitivity	220
3.1. Introduction	220
3.2. Radiometer System Noise	222
3.3. Noise Radiation from Antenna and Radiometer Components	223
3.4. Atmospheric Radiation	223
3.5. Antenna Spillover and Minor Lobes	225
3.6. Cosmic Noise	225
3.7. Summary	226
4. Low-Noise Amplifiers	227
5. Digital Data Presentation	228

TABLE OF CONTENTS

xv

6. Radiometer Calibration	230
7. Examples of Actual Radiometer Circuits	232
7.1. The University of Michigan–University of California–N.R.A.O. 8000 Megacycle per Second Radiometer	232
7.2. Leiden Observatory 21-Cm Radiometer	234
References	236
APPENDIX: TABLE OF OPTICAL TELESCOPES WITH APERTURES OVER 20 INCHES OR 50 CM	
<i>G. P. Kuiper and B. M. Middlehurst</i>	239
INDEX	253
