

# Contents

CHAPTER I. NEW WINDOWS ON THE UNIVERSE	1
1. On the Application of Interference Methods to Astronomical Measurements Albert Abraham Michelson	2
2. A Test of a New Type of Stellar Interferometer on Sirius Robert Hanbury Brown and Richard Q. Twiss	8
3. Concerning Observations of Penetrating Radiation on Seven Free Balloon Flights Victor Franz Hess	13
4. The Possibilities of Large Telescopes George Ellery Hale	21
5. A Rapid Coma-Free Mirror System Bernhard V. Schmidt	27
6. On the Discovery of Extraterrestrial Radio Waves A Note on the Source of Interstellar Interference Karl G. Jansky Cosmic Static Grote Reber	30
7. Searching for Interstellar Communications Giuseppe Cocconi and Philip Morrison	36
8. The Photoelectric Photometry of the Stars The Measurement of the Light of Stars with a Selenium Photometer, with an Application to the Variations of Algol Joel Stebbins Fundamental Stellar Photometry for Standards of Spectral Type in the Revised System of the Yerkes Spectral Atlas Harold L. Johnson and William W. Morgan	39

## CONTENTS

9. The First Results Obtained from Photographs of the Invisible Side of the Moon N. P. Barabashov and Yu. N. Lipskii	53
10. X-Ray and Extreme Ultraviolet Observations of the Sun Herbert Friedman	56
11. Evidence for X-Rays from Sources outside the Solar System Riccardo Giacconi, Herbert Gursky, Frank R. Paolini and Bruno B. Rossi	62
12. Infrared Observations of the Galactic Center Eric E. Becklin and Gerry Neugebauer	67
13. Interstellar Deuterium Abundance in the Direction of Beta Centauri John B. Rogerson and Donald G. York	75
CHAPTER II. THE SOLAR SYSTEM	79
14. The Moon's Face: A Study of the Origin of Its Features Grove Karl Gilbert	80
15. Of Atmospheres upon Planets and Satellites George Johnstone Stoney	88
16. On the Probable Existence of a Magnetic Field in Sun-Spots George Ellery Hale	96
17. How Could a Rotating Body such as the Sun Become a Magnet? Joseph Larmor	106
18. Polarization of the Moon and of the Planets Mars and Mercury Bernard Lyot	108
19. The Theory of Continental Drift Alfred Wegener	111
20. The Spectra of Venus, Mars, Jupiter, and Saturn under High Dispersion Theodore Dunham	117
21. The Mystery of Coronium and the Million-Degree Solar Corona On the Question of the Significance of the Lines in the Spectrum of the Solar Corona Walter Grotrian An Attempt to Identify the Emission Lines in the Spectrum of the Solar Corona Bengt Edlén	120
22. Corpuscular Influences upon the Upper Atmosphere Sydney Chapman	125
23. The Origin and Nature of Comets The Structure of the Cloud of Comets Surrounding the Solar System and a Hypothesis Concerning Its Origin Jan H. Oort A Comet Model I: The Acceleration of Comet Encke Fred L. Whipple	132

24. Observations of a Variable Radio Source Associated with the Planet Jupiter	143
Bernard F. Burke and Kenneth L. Franklin	
25. Solar Corpuscular Radiation and the Interplanetary Gas	147
Ludwig F. Biermann	
26. Radiation Observations with Satellite 1958 $\epsilon$	149
James A. Van Allen, Carl E. McIlwain and George H. Ludwig	
27. The Hot Surface Temperature of Venus	152
Observations of Venus at 3.15 cm Wave Length	
Cornell H. Mayer, Timothy P. McCullough and Russell M. Sloanaker	
Soft Landing of Venera 7 on the Venus Surface	
V. S. Avduevsky, M. Ya. Marov, M. K. Rozhdestvensky, N. F. Borodin, and V. V. Kerzhanovich	
28. Radar Determinations of the Rotations of Venus and Mercury	160
Rolf B. Dyce, Gordon H. Pettengill, and Irwin I. Shapiro	
29. Mars as Viewed from Mariner 9	167
Harold Masursky, Bradford A. Smith, Carl Sagan, Conway B. Leovy, Bruce C. Murray, John F. McCauley and James B. Pollack	
30. The Moon after Apollo	177
Farouk El-Baz	
31. The Encounter Theory of the Origin of the Solar System	182
The Spiral Nebula Hypothesis	
Forest Ray Moulton	
The Dissipation of Planetary Filaments	
Lyman Spitzer	
32. The Nebular Theory of the Origin of the Solar System	192
The Stability of a Spherical Nebula	
James H. Jeans	
The Origin of the Solar System	
Carl Friedrich von Weizsäcker	
33. A Production of Amino Acids under Possible Primitive Earth Conditions	203
Stanley L. Miller	
CHAPTER III. STELLAR ATMOSPHERES AND STELLAR SPECTRA	
34. On the Radiation of Stars	208
Ejnar Hertzsprung	
35. Relations between the Spectra and Other Characteristics of Stars	212
Henry Norris Russell	
36. Some Spectral Criteria for the Determination of Absolute Stellar Magnitudes	221
Walter S. Adams and Arnold Kohlschütter	
37. On the Radiative Equilibrium of Stars	225
Arthur Stanley Eddington	

## CONTENTS

38. Ionization in the Solar Chromosphere Meghnad Saha	236
39. The Abundances of Chemical Elements in Stellar Atmospheres The Relative Abundances of the Elements Cecilia H. Payne On the Composition of the Sun's Atmosphere Henry Norris Russell	243
40. On the Rotation of Stars Grigory Ambramovich Shajn and Otto Struve	254
41. Intensity Measurements of the Fraunhofer Lines in the Wavelength Region 5,150 to 5,270 Å Marcel Minnaert and Gerard Mulders	259
42. Electron Affinity in Astrophysics Rupert Wildt	264
43. The Quantitative Analysis of the B0-Star $\tau$ Scorpii, Part II Albrecht Unsöld	268
CHAPTER IV. STELLAR EVOLUTION AND NUCLEOSYNTHESIS	275
44. The Equivalence of Mass and Energy Does the Inertia of a Body Depend upon Its Energy Content? Albert Einstein The Principle of the Conservation of the Motion of the Center of Gravity and the Inertia of Energy Albert Einstein	276
45. The Internal Constitution of the Stars Arthur Stanley Eddington	281
46. The Mass-Luminosity Relation for Stars On the Relation between the Masses and Luminosities of the Stars Arthur Stanley Eddington The Relationship between the Masses and Luminosities of the Stars Heinrich Vogt	291
47. Atomic Synthesis and Stellar Energy I, II Robert d'Escourt Atkinson	303
48. Element Transformation inside Stars Carl Friedrich von Weizsäcker	309
49. Energy Production in Stars Hans Albrecht Bethe	320
50. Nuclear Reactions in Stellar Evolution George Gamow	339
51. Stellar Structure, Source of Energy, and Evolution Ernst Öpik	342

52. Nuclear Reactions in Stars without Hydrogen	349
Edwin E. Salpeter	
53. Inhomogeneous Stellar Models II: Models with Exhausted Cores in Gravitational Contraction	353
Allan R. Sandage and Martin Schwarzschild	
54. Studies of Young Clusters and Stellar Evolution in the Early Phases of Gravitational Contraction	364
Studies of Extremely Young Clusters I: NGC 2264	
Merle F. Walker	
Stellar Evolution in Early Phases of Gravitational Contraction	
Chushiro Hayashi	
55. Synthesis of the Elements in Stars	374
E. Margaret Burbidge, Geoffrey R. Burbidge, William A. Fowler and Fred Hoyle	
56. Neutrinos from the Sun	389
Solar Neutrinos I: Theoretical	
John N. Bahcall	
Search for Neutrinos from the Sun	
Raymond Davis, Don S. Harmer, and Kenneth C. Hoffman	
 CHAPTER V. VARIABLE STARS AND DYING STARS	397
57. Periods of Twenty-five Variable Stars in the Small Magellanic Cloud	398
Henrietta S. Leavitt	
58. On the Pulsations of a Gaseous Star and the Problem of the Cepheid Variables	401
Arthur Stanley Eddington	
59. T Tauri Variable Stars	410
Alfred H. Joy	
60. Binary Stars among Cataclysmic Variables III: Ten Old Novae	421
Robert P. Kraft	
61. The Discovery of White Dwarf Stars	430
An A-Type Star of Very Low Luminosity	
Walter S. Adams	
The Spectrum of the Companion of Sirius	
Walter S. Adams	
62. On Dense Stars	433
Ralph Howard Fowler	
63. Neutrino Theory of Stellar Collapse	440
George Gamow and Mario Schönberg	
64. Discovery of Circularly Polarized Light from a White Dwarf Star	447
James C. Kemp, John B. Swedlund, John D. Landstreet, and James R. P. Angel	
65. On the Gravitational Field of a Point Mass according to the Einsteinian Theory	451
Karl Schwarzschild	

## CONTENTS

66. On the Theory of Stars	456
Lev Davidovich Landau	
67. The Discovery of a Candidate Black Hole	460
Cygnus X-1: A Spectroscopic Binary with a Heavy Companion?	
B. Louise Webster and Paul Murdin	
Dimensions of the Binary System HDE 226868: Cygnus X-1	
Charles Thomas Bolton	
68. Novae or Temporary Stars	466
Edwin P. Hubble	
69. On the Possible Existence of Neutron Stars	469
On Super-Novae	
Walter Baade and Fritz Zwicky	
On Massive Neutron Cores	
J. Robert Oppenheimer and George M. Volkoff	
70. Spectra of Supernovae	478
Rudolph Minkowski	
71. The Crab Nebula	481
Rudolph Minkowski	
72. On the Nature of the Luminescence of the Crab Nebula	488
Iosif S. Shklovskii	
73. Energy Emission from a Neutron Star	494
Franco Pacini	
74. Observation of a Rapidly Pulsating Radio Source	498
Antony Hewish, S. Jocelyn Bell, John D. H. Pilkington, Paul Frederick Scott, and Robin Ashley Collins	
75. Rotating Neutron Stars as the Origin of the Pulsating Radio Sources	505
Thomas Gold	
CHAPTER VI. THE DISTRIBUTION OF STARS AND THE SPACE BETWEEN THEM	509
76. Investigations of the Spectrum and Orbit of Delta Orionis	510
Johannes Franz Hartmann	
77. Star Streaming	514
Jacobus Cornelius Kapteyn	
78. The Kinetic Energy of a Star Cluster	520
Arthur Stanley Eddington	
79. The Scale of the Universe	523
Harlow Shapley and Heber D. Curtis	
80. First Attempt at a Theory of the Arrangement and Motion of the Sidereal System	542
Jacobus Cornelius Kapteyn	

81. Star-Streaming and the Structure of the Stellar System	550
Bertil Lindblad	
82. Observational Evidence for the Rotation of Our Galaxy	554
Observational Evidence Confirming Lindblad's Hypothesis of a Rotation of the Galactic System	
Jan H. Oort	
Rotation Effects, Interstellar Absorption, and Certain Dynamical Constants of the Galaxy Determined from Cepheid Variables	
Alfred H. Joy	
83. On the Dark Nebula NGC 6960	566
Max Wolf	
84. The Source of Luminosity of Gaseous Nebulae	572
The Planetary Nebulae	
Donald H. Menzel	
An Application of the Quantum Theory to the Luminosity of Diffuse Nebulae	
Herman Zanstra	
85. The Origin of the Nebular Lines and the Structure of the Planetary Nebulae	581
Ira Sprague Bowen	
86. The Physical State of Interstellar Hydrogen	588
Bengt Strömngren	
87. Preliminary Results on the Distances, Dimensions, and Space Distribution of Open Star Clusters	593
Robert J. Trumpler	
88. The Solid Particles of Interstellar Space	605
Hendrik C. van de Hulst	
89. The Polarization of Starlight	613
Polarization of Light from Distant Stars by the Interstellar Medium	
William Albert Hiltner	
Observations of the Polarized Light from Stars	
John Scoville Hall	
90. The Temperature of Interstellar Matter	617
Lyman Spitzer and Malcolm P. Savedoff	
91. Radio Waves from Space: Origin of Radiowaves	627
Hendrik C. van de Hulst	
92. The Radio Frequency Detection of Interstellar Hydrogen	633
Radiation from Galactic Hydrogen at 1,420 MHz	
Harold I. Ewen and Edward M. Purcell	
The Interstellar Hydrogen Line at 1,420 MHz and an Estimate of Galactic Rotation	
C. Alex Muller and Jan H. Oort	
93. Some Features of Galactic Structure in the Neighborhood of the Sun	638
William W. Morgan, Stewart Sharpless, and Donald Osterbrock	

## CONTENTS

94. The Galactic System as a Spiral Nebula	643
Jan H. Oort, Frank J. Kerr, and Gart Westerhout	
95. Density Waves in Disk Galaxies	652
Chia C. Lin and Frank H. Shu	
96. The Discovery of Protostars (?)	656
Small Dark Nebulae	
Bart J. Bok and Edith F. Reilly	
The Spectra of Two Nebulous Objects near NGC 1999	
George H. Herbig	
Herbig's Nebulous Objects near NGC 1999	
Guillermo Haro	
Observations of an Infrared Star in the Orion Nebula	
Eric E. Becklin and Gerry Neugebauer	
97. Radio Observations of OH in the Interstellar Medium	666
Sander Weinreb, Alan H. Barrett, M. Littleton Meeks, and John C. Henry	
98. Galactic Magnetic Fields and the Origin of Cosmic Radiation	671
Enrico Fermi	
99. Cosmic Rays and Radio Emission from Our Galaxy	677
Cosmic Rays as the Source of General Galactic Radio Emission	
Karl Otto Kiepenheuer	
The Nature of Cosmic Radio Emission and the Origin of Cosmic Rays	
Vitallii Lazarevich Ginzburg	
100. Expanding Stellar Associations and the Origin of the Runaway O and B Stars	685
Expanding Stellar Associations	
Viktor Amazaspovich Ambartsumian	
On the Origin of the O- and B- Type Stars with High Velocities (The "Run-Away Stars") and Some Related Problems	
Adriaan Blaauw	
CHAPTER VII. NORMAL GALAXIES, RADIO GALAXIES, AND QUASARS	697
101. Novae in Spiral Nebulae	698
Heber D. Curtis, George W. Ritchey, and Harlow Shapley	
102. A Spectrographic Investigation of Spiral Nebulae	704
Vesto M. Slipher	
103. Modern Theories of the Spiral Nebulae	708
Heber D. Curtis	
104. Cepheids in Spiral Nebulae	713
Edwin P. Hubble	
105. Extra-Galactic Nebulae	716
Edwin P. Hubble	

106.	A Relation between Distance and Radial Velocity among Extra-Galactic Nebulae Edwin P. Hubble	725
107.	On the Masses of Nebulae and of Clusters of Nebulae Fritz Zwicky	729
108.	Nuclear Emission in Spiral Nebulae Carl K. Seyfert	738
109.	The Resolution of Messier 32, NGC 205, and the Central Region of the Andromeda Nebula Walter Baade	744
110.	A Revision of the Extra-Galactic Distance Scale Walter Baade	750
111.	Redshifts and Magnitudes of Extra-Galactic Nebulae Milton L. Humason, Nicholas U. Mayall, and Allan R. Sandage	753
112.	On the Evolution of Galaxies Viktor Amazaspovich Ambartsumian	763
113.	Fluctuations in Cosmic Radiation at Radio Frequencies James S. Hey, S. J. Parsons, and J. W. Phillips	774
114.	Positions of Three Discrete Sources of Galactic Radio-Frequency Radiation John G. Bolton, Gordon J. Stanley, and O. B. Slee	777
115.	Cosmic Radiation and Radio Stars Hannes Alfvén and Nicolai Herlofson	779
116.	The Origin of Cosmic Radio Noise Thomas Gold, Fred Hoyle, George McVittie, and Martin Ryle	782
117.	Identification of the Radio Sources in Cassiopeia, Cygnus A, and Puppis A Walter Baade and Rudolph Minkowski	786
118.	The Nature of Cosmic Radio Sources Martin Ryle	792
119.	First True Radio Star? Thomas A. Matthews, John G. Bolton, Jesse L. Greenstein, Guido Münch, and Allan R. Sandage	801
120.	The Discovery of Quasars Investigation of the Radio Source 3C 273 by the Method of Lunar Occultations Cyril Hazard, M. B. Mackey, and A. J. Shimmins 3C 273: A Star-like Object with Large Red-Shift Maarten Schmidt Red-Shift of the Unusual Radio Source: 3C 48 Jesse L. Greenstein and Thomas A. Matthews Absolute Energy Distribution in the Optical Spectrum of 3C 273 J. Beverly Oke	803
121.	The Quasi-Stellar Radio Sources 3C 48 and 3C 273 Jesse L. Greenstein and Maarten Schmidt	811

CHAPTER VIII. RELATIVITY AND COSMOLOGY	819
122. Explanation of the Perihelion Motion of Mercury by Means of the General Theory of Relativity Albert Einstein	820
123. A Determination of the Deflection of Light by the Sun's Gravitational Field, from Observations Made at the Total Eclipse of May 29, 1919 Frank Watson Dyson, Arthur Stanley Eddington, and Charles Davidson	826
124. Fourth Test of General Relativity: New Radar Result Irwin I. Shapiro, Michael E. Ash, Richard P. Ingalls, William B. Smith, Donald B. Campbell, Rolf B. Dyce, Raymond F. Jurgens, and Gordon H. Pettengill	833
125. On the Curvature of Space Aleksandr Friedmann	838
126. A Homogeneous Universe of Constant Mass and Increasing Radius accounting for the Radial Velocity of Extra-Galactic Nebulae Georges Lemaître	844
127. On the Relation between the Expansion and the Mean Density of the Universe Albert Einstein and Wilhelm de Sitter	849
128. The Cosmical Constants Paul Adrien Maurice Dirac	851
129. The Steady-State Theory of the Expanding Universe Hermann Bondi and Thomas Gold	853
130. The Origin of Chemical Elements Ralph A. Alpher, Hans Bethe, and George Gamow	864
131. The Evolution and Physics of the Expanding Universe Evolution of the Universe Ralph A. Alpher and Robert C. Herman The Physics of the Expanding Universe George Gamow	866
132. A Measurement of Excess Antenna Temperature at 4080 MHz Arno A. Penzias and Robert W. Wilson	873
Author Index	879
Subject Index	889
