PREFACE

| | | |
|------|----------------------------------------------------------------------|----|
| I | INTRODUCTION AND BRIEF SURVEY OF OBSERVATIONAL DATA | 1 |
| 1.1 | Introduction | |
| 1.2 | Observational Data | |
| 1.3 | Classification of Data | |
| 1.4 | Stellar Populations | |
| 1.5 | Important Phases in the Development of Theories of Stellar Structure | |
| II | QUANTUM STATISTICS AND DEGENERATE MATTER | 19 |
| 2.1 | Introduction | |
| 2.2 | Entropy | |
| 2.3 | Phase Volume Available to Each Particle of an Assembly | |
| 2.4 | Mode of Distribution of Particles in the Cells in Phase Space | |
| 2.5 | Equilibrium States | |
| 2.6 | Classical Statistics | |
| 2.7 | Non-relativistic Case of $B-E$ and $F-D$ Statistics | |
| 2.8 | Relativistic $F-D$ Statistics | |
| 2.9 | Approximate Expressions for N and p for $F-D$ Statistics | |
| 2.10 | Physical Concept of Degeneracy | |
| 2.11 | Statistics for Photons and Planck's Law of Black-body Radiation | |
| III | MEAN MOLECULAR WEIGHT FOR A PERFECT GAS | 42 |
| 3.1 | The Perfect Gas Equation | |
| 3.2 | Mean Molecular Weight of Fully Ionized Gases | |
| 3.3 | Strömgren's Method of Calculating μ for Incomplete Ionization | |
| 3.4 | Recent Work | |
| 3.5 | Ionization of Stellar Hydrogen and Helium | |
| IV | RADIATION AND RADIATIVE EQUILIBRIUM | 53 |
| 4.1 | Elementary Ideas | |
| 4.2 | Definition of Terms | |
| 4.3 | Laws to be Used | |
| 4.4 | Local Thermodynamic Equilibrium | |
| 4.5 | The Equation of Radiative Transfer | |
| 4.6 | The Solution of the Equation of Transfer for Stellar Interiors | |
| 4.7 | Integrated Flux | |
| 4.8 | Rosseland's Correction to κ_ν for Induced Emission | |
| 4.9 | The Equation of Radiative Equilibrium | |
| 4.10 | Equations for Spherical Symmetrical Distribution | |
| 4.11 | Relation between Gas Pressure and Radiation Pressure | |

| | | |
|------|-----------------------------------------------------------------------------------------------------------------|-----|
| V | THERMODYNAMICS OF A PERFECT GAS AND RADIATION | 74 |
| 5.1 | Specific Heat of a Perfect Gas | |
| 5.2 | Polytropic Changes | |
| 5.3 | (i) Specific Heats of a System Consisting of a Gas and Radiation | |
| 5.3 | (ii) Adiabatic Change | |
| 5.4 | Specific Heat for the Ionized Material | |
| 5.5 | Stability of Radiative Temperature Gradient | |
| 5.6 | Convective Flux | |
| 5.7 | Parametric Equations for a System Containing a Monatomic Perfect Gas and Radiation in Convective Equilibrium | |
| VI | THE STELLAR OPACITY FOR A PERFECT GAS | 91 |
| 6.1 | Methods of Calculating Stellar Opacity | |
| 6.2 | Stellar Absorption of Radiation | |
| 6.3 | <i>B-F</i> and <i>F-F</i> Transition | |
| 6.4 | Electron Scattering | |
| 6.5 | The Opacity Coefficient for Integrated Radiation | |
| 6.6 | Modified Kramers' Law | |
| VII | THERMODYNAMICS AND OPACITY OF DEGENERATE MATTER | 108 |
| 7.1 | Specific Heats | |
| 7.2 | Opacity of Dense Matter | |
| 7.3 | Radiative Opacity | |
| VIII | ENERGY OF STARS | 122 |
| 8.1 | Thermonuclear Reactions | |
| 8.2 | Nuclear Structure | |
| 8.3 | Potential Barrier | |
| 8.4 | The Probability of Non-resonant Thermonuclear Reactions | |
| 8.5 | Mean Life of a Nucleus | |
| 8.6 | Three Important Nuclear Reactions | |
| 8.7 | Carbon-Nitrogen Cycle | |
| 8.8 | Three-alpha Reaction | |
| 8.9 | Some Other Important Reactions | |
| 8.10 | Gravitational Contraction as a Source of Energy | |
| IX | FUNDAMENTAL EQUATIONS OF STELLAR STRUCTURE | 147 |
| 9.1 | The Equation of Hydrostatic Equilibrium | |
| 9.2 | Integral Theorems | |
| 9.3 | Uniform Contraction. Lane's Law | |
| 9.4 | Fundamental Equations of Stellar Structure | |
| 9.5 | Boundary Conditions | |
| 9.6 | The Vogt-Russell Theorem | |
| 9.7 | Strömgren's Theorem | |
| 9.8 | Transformation of the Equations to Dimensionless Forms | |

| | | |
|------|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| X | COMPLETELY CONVECTIVE AND RADIATIVE MODELS WITH UNIFORM CHEMICAL COMPOSITION | 170 |
| | 10.1 Homogeneous Models | |
| | 10.2 Polytropic Models without Radiation Pressure | |
| | 10.3 The Homology Theorem and the Homology Invariant Functions | |
| | 10.4 The Milne and the Fowler Solutions of the Lane-Emden ($L-E$) Equation | |
| | 10.5 Isothermal Gas Sphere | |
| | 10.6 Convective Stellar Model with Radiation Pressure | |
| | 10.7 Radiative Model | |
| | 10.8 Model for Sub-dwarfs of Population II and the Mass-Luminosity Relation | |
| | 10.9 Integration of the Equations of Structure | |
| | 10.10 Properties of the Model | |
| XI | HOMOGENEOUS COMPOSITE MODELS | 201 |
| | 11.1 Homogeneous Composite Models | |
| | 11.2 The Homogeneous Composite Models with Radiative Cores and Convective Envelopes | |
| | 11.3 The Homogeneous Models consisting of Convective Cores and Radiative Envelopes. Models for Initial Upper Main Sequence Stars | |
| XII | WHITE DWARF STARS | 227 |
| | 12.1 Characteristics of White Dwarfs | |
| | 12.2 Completely Degenerate Configurations | |
| | 12.3 The Maximum Mass for the Completely Degenerate Configuration with Radiation Pressure | |
| | 12.4 The Composite Configurations | |
| | 12.5 Partially Degenerate Configurations | |
| | 12.6 Energy Generation in White Dwarfs | |
| | 12.7 The Elementary Theory of Pressure Ionization and the Maximum Radius for a Cold Body | |
| XIII | EVOLUTION OF STARS | 254 |
| | 13.1 Introduction | |
| | 13.2 Contractional Phase | |
| | 13.3 Some General Remarks about the Evolution of Stars from the Main Sequence Stage | |
| | 13.4 General Survey of the Development of the Theory of Evolution | |
| | 13.5 The Evolution of the Sun | |
| | 13.6 The Early Evolution of the Upper Main Sequence Stars | |
| | 13.7 The Later Phases of Evolution | |
| XIV | FORMATION OF ELEMENTS | 298 |
| | 14.1 Cosmic Abundance Curve | |
| | 14.2 Gamow's Theory | |
| | 14.3 Synthesis of Elements in Stars | |
| | 14.4 Nuclear Reactions and Synthesis of Heavy Elements | |
| | 14.5 Synthesis of Elements and Evolution of Stars | |
| | INDEX OF AUTHORS | 311 |
| | INDEX | 314 |
