

Table of Contents

Preface	ix
Preface to the English Edition	xi
Chapter 1 / Introduction	1
Chapter 2 / A Spherically Symmetric Black Hole	5
2.1. Spherically Symmetric Gravitational Field	5
2.2. Spherically Symmetric Gravitational Field in Vacuum	6
2.3. Radial Motion of Test Particles in the Schwarzschild Field	9
2.4. Spacetime Within the Schwarzschild Sphere	12
2.5. Contracting and Expanding T Regions	17
2.6. Formation of a Black Hole in a Gravitational Collapse. White Holes	19
2.7. Eternal Black and White Holes	22
2.8. Celestial Mechanics in the Gravitational Field of the Black Hole	28
2.9. Gravitational Capture	33
2.10. The Motion of Particles Corrected for Gravitational Radiation	34
Chapter 3 / Wave Fields Around a Spherical Black Hole	36
3.1. Weak Fields in the Schwarzschild Metric	36
3.2. Gravitational Perturbations of the Schwarzschild Metric	38
3.3. Gravitational Radiation of a Test Particle in the Field of a Black Hole	41
3.4. Power-Law ‘Tails’ of the Gravitational Radiation	45
3.5. Cross-Section of Wave Scattering by a Black Hole	47
Chapter 4 / Rotating Black Hole	51
4.1. Formation of a Rotating Black Hole	51
4.2. The ‘3 + 1’ Split of Spacetime Outside the Black Hole	52
4.3. Chronometric Reference Frame and a Reference Frame of Locally Nonrotating Observers	54
4.4. Spacetime of a Rotating Black Hole	60
4.5. Celestial Mechanics Near a Rotating Black Hole	62
4.6. Gravitational Capture of Particles by a Rotating Black Hole	66
4.7. Wave Fields Around a Rotating Black Hole	68
4.8. Charged Rotating Black Hole	79

Chapter 5 / General Properties of Black Holes	82
5.1. Asymptotically Flat Spaces. Penrose Diagrams	82
5.2. Event Horizon. Penrose Theorem	89
5.3. The Ehlers–Sachs Theorem. Focusing of Light Rays by Gravitational Field	93
5.4. Hawking's Theorem. Cosmic Censorship Conjecture	98
5.5. Trapped Surfaces, Apparent Horizons, R - and T -Regions	100
5.6. Theorems on Singularities Inside Black Holes	107
Chapter 6 / Stationary Black Holes	110
6.1. 'Black Holes Have No Hair'	110
6.2. General Properties of Stationary Black Holes	112
6.3. Uniqueness Theorem for Static Black Holes	118
6.4. Uniqueness Theorem for Stationary Axially Symmetric Black Holes	121
6.5. Analytic Continuation of the Kerr–Newman Metric Inside the Event Horizon	128
6.6. Generalization of the Uniqueness Theorem to the Case of Nonelectromagnetic Fields	131
Chapter 7 / Black-Hole Electrodynamics	135
7.1. Maxwell's Equations	136
7.2. Stationary Electrodynamics in the Case of Axial Symmetry. Force-Free Fields	138
7.3. Boundary Conditions at the Event Horizon. Membrane Interpretation and 'Stretched' Horizon	143
7.4. Electromagnetic Fields in Vacuum in the Neighborhood of a Black Hole	148
7.5. Magnetosphere of a Black Hole	151
Chapter 8 / Physical Effects in the Gravitational Field of a Black Hole	156
8.1. Extraction of Energy from a Black Hole. Superradiance	156
8.2. Global Structure of the Field of a Test Charge in the Spacetime of an Eternal Black Hole	162
8.3. The Shift in the Self-Energy of a Charged Particle in the Field of a Black Hole	168
8.4. Mutual Transformation of Electromagnetic and Gravitational Waves in the Field of a Charged Black Hole	171
8.5. Black Hole in an External Field. Interaction Between Black Holes	176
Chapter 9 / Quantum Effects in Black Holes. Particles Production	190
9.1. Role Played by Quantum Effects in Black-Hole Physics	190
9.2. Quantum Creation of Particles in an External Field. General Theory	196
9.3. Averaging over 'Nonobservable' States. Density Matrix	202
9.4. Density Matrix and Generating Functional for Quantum Effects in Black Holes	205

9.5. Particular Cases	217
Chapter 10 / Vacuum Polarization near Black Holes	233
10.1. Quasiclassical Approximation. Renormalized Energy-Momentum Tensor	233
10.2. Choice of State and Boundary Conditions for Green's Functions	236
10.3. $\langle T_{\mu}^{\nu} \rangle^{\text{ren}}$ and $\langle \phi^2 \rangle^{\text{ren}}$ in the Spacetime of a Black Hole	240
Chapter 11 / Thermodynamics of Black Holes	254
11.1. Black Holes and Thermodynamics	254
11.2. Surface Gravity. Mass Formula	256
11.3. Four Laws of Black-Hole Physics	265
11.4. Black Hole as a Thermodynamic System	270
Chapter 12 / The Internal Structure of Black Holes	274
12.1. Spacetime and Physical Fields Inside a Schwarzschild Black Hole	274
12.2. Instability of Cauchy Horizons Inside a Charged Spherical Black Hole	277
12.3. Instability of Cauchy Horizons with Respect to Quantum Electrodynamical Processes	282
12.4. Instability of Cauchy Horizons Inside a Rotating Black Hole. General Remarks	286
Chapter 13 / Primordial Black Holes and the Ultimate Fate of Black and White Holes	288
13.1. Primordial Black Holes	288
13.2. Classical and Quantum Instabilities of White Holes	289
13.3. What is Left after a Quantum Decay of a Black Hole?	294
13.4. Elementary Black Holes (Maximons). Virtual Black Holes and the Foam-Like Structure of Spacetime	299
Conclusion	302
Appendix	303
Notes	313
References	323
Subject Index	339
