CONTENTS

PREFACE TO THE ENGLISH EDITION ix

PREFACE TO THE RUSSIAN EDITION xi

INTRODUCTION

1. The Subject of Stellar Dynamics 1
2. A Brief Outline of the Historical Development of Stellar Dynamics 3
3. The Fundamentals of the Synthetic Method in Stellar Dynamics 5
4. The Practical Significance of Stellar Dynamics 11

I. THE FUNDAMENTAL CONCEPTS OF STELLAR STATISTICS

1. Some Properties of Univariate Distribution Functions 13
2. Multivariate Distribution Functions 19
3. Statistical Properties of Stars 23

II. THE KINEMATICS OF STELLAR SYSTEMS

1. The Macroscopic Volume Element and the Star Density Function 33
2. The Phase Density Function 34
3. The Velocity Distribution Function 35
4. Centroids 37
5. The Local Motion of the Sun in the Galaxy 40
6. The Velocity Ellipsoid and its Determination from Observations 42
7. Results of Velocity Ellipsoid Determinations and some Inferences therefrom 50
8. The Determination of the Actual Form of the Ellipsoidal Velocity Function 53
9. The Differential Field of Centroid Velocities. Helmholtz' Theorem for Stellar Systems 59
10. Determination of the Kinematic Parameters of the Differential Field of Centroid Velocities from the Observed Velocities of Stars 64

III. THE ELEMENTARY THEORY OF GALACTIC ROTATION

1. General Formulae of Galactic Rotation 67
2. The Local Field of Centroid Velocities. Generalisation of Oort's Formulae 70
3. Oort's Formulae for an Arbitrary Plane-parallel Motion 74

4. The Physical Basis of the Theory of Galactic Rotation. The Nature of the K Term 75
5. Determination of the Parameters of Galactic Rotation from Observation 78
6. Determination of the Period of Rotation and Angular Velocity of the Galaxy 80
7. Determination of the Mass of the Galaxy 82
8. The Velocity of Escape and the Phenomenon of the High-velocity Stars 85
9. Kinematics of Centroids in the Metagalaxy 91
10. The Problem of Setting up a Fundamental Coordinate System 96

IV. Irregular Forces in Stellar Systems

1. The Fundamental Quantities which Characterise the State of a Stellar System 99
2. Star Encounters. Regular and Irregular Forces 103
3. The Effect of Irregular Forces: Individual Encounters 105
4. The Effect of Irregular Forces: the Cumulative Effect 110
5. Various Types of Equilibrium of Stellar Systems. The Quasi-steady State 114
6. The Relaxation Time and the Disintegration Half-life 116
7. The Fundamental Paradox in the Classical Dynamics of Stellar Systems 119
8. The Interaction of Stars with Dust Clouds 122
9. The Invariance of Maxwell's and Schwarzschild's Velocity Distribution Laws in Stellar Encounters 130

V. Statistical Stellar Dynamics Neglecting Encounters

1. The Fundamental Differential Equation of Stellar Dynamics 137
2. The Boltzmann Equation in Curvilinear Coordinates 140
3. Jeans' Theorem and Liouville's Theorem 143
4. The Integrals of the Motion in Some Typical Cases 145
5. One-valued and Many-valued Integrals. The Ergodic Hypothesis in Stellar Dynamics 147
6. Jeans' Problem. The Symmetry of the Distribution in Velocity Space 153
7. The Inverse Jeans' Problem 156
8. The Importance of Using One-valued Integrals of the Motion 164
9. Quasi-integrals of the Motion. Oort's Quasi-integral 168
10. The Problem of the Third Integral for Systems with Rotational Symmetry 172
11. The Potential Energy of Stellar Systems 178
12. The Virial Theorem. Poincaré's Theorem on the Limiting Angular Velocity of Rotation 181

VI. Regular Orbits of Stars

1. Circular and Almost Circular Orbits in a Stellar System with Rotational Symmetry and a Plane of Symmetry 185

2. Determination of the Potential of the Galaxy 191
3. Some Properties of Regular Galactic Orbits 193
4. The Distribution of Mass in the Galaxy and Some Related Problems 197
5. Some Properties of Star Orbits in Spherical Systems 203

VII. The Problem of Local Dynamics

1. Statement of the Problem 208
2. The Local Cluster and its Motion in the Galaxy 210
3. Observed Anomalies of Stellar Motions in the Neighbourhood of the Sun 212
4. The Linearised Equations of Motion in Lindblad's System of Rotating Coordinates 216
5. Conditions for the Dynamical Stability of Stellar Condensations 220
6. The Quasi-precession of the Velocity Ellipsoid 223
7. The Quasi-tidal Effect on the Velocity Ellipsoid 225
8. The Application of the Theory to the Observational Results 227
9. The Combined Quasi-precession and Quasi-tidal Effects 230
10. The K Effect as a Result of the Dissipation of the Local Cluster 234
11. The Dynamics of the Local Cluster 237

VIII. Dynamics of Centroids

1. Macroscopic Motions in Stellar Systems 240
2. Some Properties of the Kinematics of Centroids 242
3. Equations of Motion of Centroids in Rectangular Coordinates 244
4. The Dynamical Significance of the Velocity Moment Tensor 248
5. Equations of Motion of Centroids in Cylindrical and Spherical Coordinates 250
6. The Hydrodynamical Equations for a Rotationally Symmetrical System in a Steady State 254
7. The Explanation of the Asymmetry of Stellar Motions in the Galaxy 256

IX. Dynamics of Spherical Stellar Systems

1. The Basic Equations for Spherical Systems 260
2. The Use of the Theory of Polytropic Spheres 264
3. The Most Probable Phase Distribution 269
4. The Truncation of the Phase Distribution. Determination of the Star Density 274
5. Discussion of the Expression Obtained for the Phase Density 276
6. Determination of the Parameter h^2 of the Phase Distribution 279
7. The Distribution of Star Orbits. Lindblad and Bottlinger Diagrams 281
8. Spherical Systems with an Inhomogeneous Star Population 291

X. Dynamics of Rotating Stellar Systems

1. The Masses and Rotation of Various Types of Galaxy 295
2. The Boundaries of the Galaxies 296
3. The Method of Additive Parameters 299
4. The Most Probable Phase Distribution for the Simplest Types of Galaxy 302
5. The Phase Distribution for Dynamically Determinate Galaxies 304
6. Equilibrium Figures of *D* Galaxies 308
7. The Formation of Sharp Edges in Elliptical Galaxies 314
8. The Formation of Central Nuclei and Ring Structure in Galaxies 316
9. The Existence of Needle-shaped and Pear-shaped Galaxies 319
10. Kapteyn–Lindblad Systems 322
11. The Fourth Additive Parameter for KL Systems 328
12. The Most Probable Phase Distribution for KL Systems 333
13. The Galaxy and Similar Spirals as Kapteyn–Lindblad Systems 339
14. Some Conclusions Regarding the Processes of Evolution of Stellar Systems 343
