

CONTENTS

PREFACE	ix
CHAPTER I: HISTORY, MORPHOLOGY AND EVOLUTION	1
A Historical Review	1
CHAPTER II: DISTRIBUTION OF PLANETARY NEBULAE IN THE GALAXY	19
A. Methods of discovering planetary nebulae	19
B. Distribution in galactic coordinates	22
B.1. Galactic longitude distribution	22
B.2. Galactic latitude distribution	24
C. Radial velocities of the nebulae	26
D. Extragalactic planetary nebulae	32
D.1. Discovery of extragalactic planetary nebulae	32
D.2. Distribution of extragalactic planetary nebulae	33
D.3. Luminosity function of planetary nebulae	34
CHAPTER III: INTERPRETATION OF EMISSION LINES AND NEBULAR ABUNDANCES	38
A. Recombination lines	38
A.1. Hydrogen line formation in the low density limit	38
A.2. Hydrogen line formation at finite densities	40
A.3. Ionization by diffuse Lyman continuum photons	41
A.4. Self-absorption in the hydrogen spectrum	42
A.5. Helium	44
B. Collisionally excited lines	46
C. Line formation in heavier elements by other processes	53
C.1. Dielectronic recombination	53
C.2. Other recombination processes	55
C.3. OIII Bowen resonance-fluorescence	55
D. Nebular models	57
E. Abundances in planetary nebulae	60
E.1. Helium	64
E.2. Oxygen	64
E.3. Nitrogen	64
E.4. Carbon	64
E.5. Neon, Argon and Sulfur	65
E.6. Abundance variations with galactic latitude	66
E.7. Variation of nebular abundance with position in the nebula	68

CHAPTER IV: NEBULAR CONTINUUM EMISSION	71
A. Sources of continuum emission	71
A.1. Hydrogen free-bound and free-free emission	71
A.2. Helium continuum emission	73
A.3. Hydrogen two-quantum emission	74
A.4. Helium two-quantum emission	78
B. Comparison of theory with observations	79
C. Separation of continuum radiation from the nebula and the exciting star	82
C.1. The visual continuum	83
C.2. The ultraviolet continuum	85
D. Radio continuum radiation	86
D.1. Constant density nebula	88
D.2. Nebulae with varying density	90
E. Comparison of radio continuum with hydrogen line emission	92
CHAPTER V: DISTANCE TO THE NEBULAE	95
A. Extinction	95
B. Distances to individual nebulae	100
C. Mass of the nebula	111
C.1. Nearby nebulae	111
C.2. Galactic center nebulae	112
C.3. Discussion of the nebular mass variation	112
D. Statistical methods for determining distances	114
D.1. 'Shklovskii' method	114
D.2. Modified 'Shklovskii' method	115
D.3. Proper motions	115
E. Absolute nebular flux	117
F. The space density of nearby nebulae and their distribution with height above the galactic plane	119
CHAPTER VI: MORPHOLOGY, EXPANSION AND MASS LOSS	123
A. Morphology: measurements	123
B. Nebular expansion	128
C. Morphology: models and classification	132
D. Morphology: 'halo' structures	136
E. Morphology: four individual cases	140
F. Mass loss from the central star: ultraviolet lines	143
G. Other evidence for mass loss: visual lines	150

CHAPTER VII: THE TEMPERATURE OF THE CENTRAL STARS	154
A. The line spectra	154
B. The continuous spectrum of the central star	159
C. Model atmospheres	161
D. 'Zanstra' temperatures	166
D.1. The Zanstra hydrogen temperature	168
D.2. The Zanstra ionized helium temperature	171
D.3. Discussion of nebulae consisting of hydrogen and helium	173
D.4. Resultant temperatures and discussion	174
E. 'Stoy' temperatures	179
F. Temperatures derived from nebular ionization equilibrium	184
CHAPTER VIII: INFRARED AND MILLIMETER RADIATION	192
A. Infrared continuous emission	192
B. Interpretation as dust emission	197
C. Energy input to the dust	202
D. Consequences for the central star temperature determination	204
E. Broad and narrow infrared emission features	206
F. Molecular hydrogen	209
G. Carbon monoxide emission	212
CHAPTER IX: EVOLUTION OF THE CENTRAL STAR	215
A. Observational evidence	215
A.1. The H-R diagram	215
A.2. White dwarfs	221
B. Theoretical models	224
B.1. Review of the early evolution	224
B.2. Uncertainty in early evolution	228
B.3. Enrichment of helium, nitrogen and carbon	229
B.4. Evolution after nebular formation	231
C. Comparison of theory and observation	233
C.1. The H-R diagram and central star mass	233
C.2. The ages of the nebulae and the position of the star on the H-R diagram	234
C.3. Changes in chemical composition in the atmosphere	235

CHAPTER X: EVOLUTION FROM RED GIANT TO PLANETARY NEBULA	240
A. The cool giants	241
B. The Mira variables	242
B.1. Light curves, periods, absolute magnitudes and mass loss	242
B.2. Spatial distribution, kinematics and local space density of Miras	245
B.3. Mass loss	246
B.4. Mass of Mira variables and pulsation theory	248
C. The OH/IR masers	249
C.1. OH maser emission	249
C.2. Observed OH emission	252
C.3. Detection and kinematics of OH/IR maser sources	256
C.4. The birthrate of OH/IR stars	258
C.5. The missing link?	258
D. Protoplanetary nebulae and symbiotic stars	260
D.1. V 1016 Cygni and HM Sge	260
D.2. CRL 618	262
D.3. CW Leo	264
D.4. Far infrared radiation from protoplanetary nebulae	265
E. FG Sge and its nebula	267
F. Discussion of the evolution	270
CHAPTER XI: INFLUENCE OF PLANETARY NEBULAE ON THE INTERSTELLAR MEDIUM	274
A. The mass input	277
B. The dust input	279
C. Kinetic energy input	280
D. Element abundance changes	281
E. The far-ultraviolet radiation field	284
E.1. Absorption of radiation in the interstellar medium	285
E.2. Radiation of optically thin planetary nebulae and hot white dwarfs	285
E.3. Comparison with O stars	287
APPENDIX I: POSITIONS AND OTHER INFORMATION OF THE BRIGHTEST PLANETARY NEBULAE AND THEIR CENTRAL STARS	294
APPENDIX II: INFRARED CONTINUUM FLUX FROM PLANETARY NEBULAE	302
SUBJECT INDEX	304
AUTHOR INDEX	313
INDEX OF INDIVIDUAL OBJECTS	319
