CONTENTS

PREFACE v

PART ONE: FUNDAMENTALS

CHAPTER I. INTRODUCTION

1. Radiative Transfer Theory Defined 3
2. Problems of Radiative Transfer Theory 6
3. Local and Global Formulations of the Problems 7
4. Continuous and Discrete Formulations of the Problems 8
5. Outline and Motivation for Discrete-space Theory 11
6. Bibliographic Notes for Chapter I 16

CHAPTER II. GEOMETRICAL RADIOMETRY

7. Geometrical Radiometry in Radiative Transfer Theory 17
8. Radiant Flux 17
9. Geometrical Properties of Radiant Flux 21
10. Irradiance 24
11. Radiance 28
12. Radiance Invariants 30
13. Analytical Connections Among the Radiometric Concepts 38
14. Bibliographic Notes for Chapter II 41

CHAPTER III. RADIATIVE TRANSFER THEORY: CONTINUOUS FORMULATION

15. Introduction 42
16. Beam Transmittance Function 43
17. Volume Attenuation Function 45
18. Volume Scattering Function 49
19. Path Function and Emission Function 56
20. Volume Absorption Function; Definition of Continuous Optical Medium in Geophysical and Astrophysical Optics 60
21. The Equation of Transfer 63
22. The Natural Solution of the Equation of Transfer 69
23. The General Invariant Imbedding Relation 78
24. The Classical Principles of Invariance 85
25. Functional Relations for the Operator $\mathscr{S}$ on General Media 97
26. Bibliographic Notes for Chapter III 110

CHAPTER IV. THE INTERACTION PRINCIPLE

27. Introduction 112
28. The Interaction Principle 112
29. The Point-level Interpretation 115
30. The Surface-level Interpretation 119

31. The Space-level Interpretation 128
32. The Hierarchy of Interpretations 130
33. The Point-level Convention 131
34. Bibliographic Notes for Chapter IV 131

PART TWO: DISCRETE-SPACE THEORY

CHAPTER V. RADIATIVE TRANSFER THEORY: DISCRETE FORMULATION
35. Introduction 135
36. Special Discrete Spaces 135
37. General Discrete Spaces 142
38. Vector Formulation of the Local Interaction Principle 144
39. Functional Relations for the Radiance Vectors 146
40. Solutions of the Functional Relations 147
41. Scattering-order Decomposition of the Solutions 150
42. Bibliographic Notes for Chapter V 153

CHAPTER VI. INVARIANT IMBEDDING RELATION FOR DISCRETE SPACES
43. It Will Be Shown That 154
44. The Divisibility Property of the Local Interaction Principle 154
45. Can Be Used in Hierarchies of Discrete Spaces 156
46. To Derive the Invariant Imbedding Relation 158
47. And the Principles of Invariance 163
48. Et Cetera 166
49. Bibliographic Notes for Chapter VI 166

PART THREE: DISCRETE-SPACE APPLICATIONS

CHAPTER VII. RADIATIVE TRANSFER ON A LINEAR LATTICE
50. Introduction 171
51. The Linear Lattice 174
52. The Local Interaction Principle on a Linear Lattice 175
53. Hierarchies of Linear Lattices 175
54. Two-flow Equations on a Linear Lattice 177
55. The Principles of Invariance on a Linear Lattice 179
56. Equations Governing the R and T Factors 183
57. Remarks on the Polarity of the R and T Factors 187
58. Solution of the Two-flow Problem 189
59. The Plane-parallel Medium and Its Associated Linear Lattice 190
60. Bibliographic Notes for Chapter VII 193

CHAPTER VIII. RADIATIVE TRANSFER ON A CUBIC LATTICE
61. Introduction 194
62. The Extended Cubic Lattice 195
63. The Associated Quotient Space and Radiance Functions 197
64. Principles of Invariance 200

65. Equations Governing the R and T Operators for Multilayers 204
66. The R and T Operators for a Monolayer 209
67. Remarks on the Polarity of the R and T Operators 215
68. Solution of the Twenty-six-flow Problem 218
69. The Plane-parallel Medium and Its Associated Cubic Lattice 219
70. Computation Procedure 224
71. Unification of Planetary Radiative Transfer Problems 230
72. Bibliographic Notes for Chapter VIII 231

CHAPTER IX. PLANE-SOURCE GENERATED LIGHT FIELDS IN DISCRETE SPACES
73. Introduction 232
74. Formulation of Problem 233
75. The Ψ-operator 235
76. First Decomposition of the Ψ-operator 237
77. Complete Reflectance and Transmittance Relations 238
78. Second Decomposition of the Ψ-operator 240
79. Details of Solution 241
80. Summary of Plane-source Solution 246
81. Bibliographic Notes for Chapter IX 247

CHAPTER X. TWO METHODS OF POINT-SOURCE PROBLEMS IN DISCRETE SPACES
82. Introduction 248
83. Formulation and Formal Solution of the Problem 251
84. Introduction to the Iteration Method 253
85. A Time-dependent Interpretation of the Iteration Formula 254
86. Generalizations of the Iteration Method 259
87. Two Divergence Relations 261
88. Introduction to the Categorical Analysis Method 263
89. Geometry and Radiometry of Categories 264
90. Ψ-operators for the Categories 271
91. First Decomposition of Ψ-operators for Imbedded Categories 283
92. Invariant Imbedding Relation for Monoblocs 285
93. Principles of Invariance for Monoblocs 287
94. Representations of Light Field Using Complete Reflectance and Transmittance Operators on Monoblocs 289
95. Second Decomposition of Ψ-operator for Monoblocs 290
96. Representation of Complete Operators for Monoblocs 290
97. Representation of the Local Ψ-operator for Monoblocs 294
98. Representation of the Standard Operators for Monoblocs 297
99. The Categorical Analysis Concluded 300
100. Categorical Synthesis of the Solution 303
101. Bibliographic Notes for Chapter X 304

CHAPTER XI. A COMPUTER STUDY OF RADIATIVE TRANSFER ON A CUBIC LATTICE
102. Introduction 305
103. The Original Physical Setting 305
104. The Associated Discrete Space 307

105. Comparison of Measured and Computed Radiances 308
106. Some Computer Details 314
107. Bibliographic Notes for Chapter XI 315

PART FOUR: ADVANCED TOPICS

CHAPTER XII. THEORY OF POLARIZED LIGHT FIELDS IN DISCRETE SPACES
108. Introduction 319
109. Phenomenological Definition of Polarized Radiance 320
110. Connections Between Standard Stokes and Standard Observable Vectors 325
111. Rotation Matrices 328
112. Scattering and Attenuation Matrices for Polarized Radiance 331
113. Continuous Radiative Transfer Theory for the Polarized Context 335
114. Discrete Radiative Transfer for the Polarized Context 337
115. Bibliographic Notes for Chapter XII 341

CHAPTER XIII. MARKOV CHAINS AND RADIATIVE TRANSFER
116. Introduction 342
117. Markov Chains 342
118. From Local Interaction Principle to Markov Chains 348
119. From Markov Chains to the Local Interaction Principle 364
120. Classification of Material-radiative Markov Chains 373
121. Conclusion and Prospectus 387
122. Bibliographic Notes for Chapter XIII 387

CHAPTER XIV. CONNECTIONS WITH THE MAINLAND
123. Introduction 389
124. The Poynting Vector and the Radiance Function 391
125. From Electromagnetic Theory to the Interaction Principle 394
126. From the Interaction Principle to the Principles of Invariance and the Equation of Transfer 400
127. General Connections 404
128. Bibliographic Notes for Chapter XIV 409

CHAPTER XV. RADIATIVE TRANSFER THEORY: AXIOMATIC FORMULATION
129. Introduction 411
130. The Axioms and Their Motivations 413
131. Abstract Transfer Equations 416
132. Classical Transfer Equations 422
133. From the Axioms to the Interaction Principle 423
134. From the Axioms to the Invariant Imbedding Relation 424
135. From the Axioms to the Local Interaction Principle 427
136. Axiomatic Basis for the Theory of Polarized Radiance 429
137. Radiative Transfer and the Mueller Algebra 430
138. Summary and Prospectus 431
139. Bibliographic Notes for Chapter XV 433

CHAPTER XVI. SOME MATHEMATICAL PROBLEMS OF RADIATIVE TRANSFER THEORY
140. Introduction 434
141. Statement of the Problems 434
142. Discussion of the Problems 435
