

CONTENTS

Contributors	xiii
--------------------	------

Part I. Introduction

Stellar Evolution: A Survey with Analytic Models.....	3
<i>Robert F. Stein</i>	

Part II. Physics of Stellar Interiors

Nuclear Energy Generation in Stars, and Some Aspects of Nucleosynthesis... ..	83
<i>Hubert Reeves</i>	
Radiative Absorption and Opacity Calculations.....	123
<i>Arthur N. Cox</i>	
Energy Transport by Turbulent Convection.....	143
<i>Edward A. Spiegel</i>	
Neutrinos in Astrophysics	175
<i>Hong-Yee Chiu</i>	

Part III. Stellar Evolution

A. Pre-Main-Sequence Contraction

On Contracting Stars	193
<i>Chushiro Hayashi</i>	
The Contraction Phase of Solar Evolution.....	203
<i>D. Ezer and A. G. W. Cameron</i>	
Schematic Pre-Main-Sequence Evolution	209
<i>K. von Sengbusch and S. Temesváry</i>	
Role of Magnetic Activity During Stellar Formation.....	215
<i>E. Schatzman</i>	

B. Hydrogen-Burning

Calculations of Main-Sequence Stellar Models	221
<i>Anders Reiz and Jørgen O. Petersen</i>	
Evolution of Stars Near One Solar Mass	231
<i>P. Demarque</i>	
The Early Evolution of Stars Between One and Three Solar Masses.....	237
<i>I. Iben, Jr.</i>	
On the Problem of Detecting Solar Neutrinos.....	241
<i>John N. Bahcall and Raymond Davis, Jr.</i>	
Solar Models and Neutrino Fluxes	245
<i>R. L. Sears</i>	

C. Advanced Stages of Evolution

Advanced Stages of Stellar Evolution	253
<i>Chushiro Hayashi</i>	
The Evolution of a Star of Seven Solar Masses.....	263
<i>E. Hofmeister, R. Kippenhahn, and A. Weigert</i>	
Pre-Supernova Evolution (Neutrino Stars).....	279
<i>Hong-Yee Chiu</i>	
Mechanism of Type II Supernova Explosions	291
<i>Stirling A. Colgate and Richard H. White</i>	
Cooling of White Dwarfs.....	303
<i>M. P. Savedoff</i>	
Formation of Helium in the Galaxy.....	307
<i>J. W. Truran, C. J. Hansen, and A. G. W. Cameron</i>	

D. Stellar Evolution with Varying G

Stellar Evolution with Varying G	319
<i>R. H. Dicke</i>	

Part IV. Stellar Variability

Simplified Models for Cepheid Instability.....	333
<i>Norman Baker</i>	
Excitation and Growth of Radial Pulsations.....	347
<i>J. P. Cox</i>	
Stellar Variability	359
<i>R. F. Christy</i>	

Part V. Stellar Mass Loss

T Tauri Mass Ejection.....	373
<i>L. V. Kuhi</i>	
Mass Loss from Red Giants.....	377
<i>Armin J. Deutsch</i>	
Mass Loss in the Planetary Nebula Stage.....	381
<i>D. E. Osterbrock</i>	

Part VI. Observations Concerning Stellar Evolution

Age Determination for Main-Sequence B, A, and F Stars.....	391
<i>B. Strömgren</i>	
Photometry of B Stars	395
<i>D. L. Crawford</i>	
The Analysis of Field Horizontal-Branch and RR Lyrae Stars.....	399
<i>J. B. Oke, J. L. Greenstein, and J. Gunn</i>	
Ultraviolet Excesses in T Tauri Stars.....	405
<i>M. Walker</i>	

Lithium in Main-Sequence Stars.....	411
<i>G. H. Herbig</i>	
Recent Abundance Determinations.....	417
<i>H. L. Helfer</i>	
Transport of <i>s</i> -Process Elements to the Surfaces of Stars.....	419
<i>Vern L. Peterson and Marshal H. Wrubel</i>	
CH Stars and Neutron-Addition Processes.....	425
<i>G. Wallerstein and J. L. Greenstein</i>	
Abundance Differences Among Population I Stars.....	431
<i>B. E. J. Pagel</i>	
Element Abundances in the Peculiar A Stars.....	437
<i>William P. Bidelman</i>	
Stellar Groups and the Mass–Luminosity Relation.....	439
<i>Olin J. Eggen</i>	
Composition Differences Between the Galaxy and the Magellanic Clouds....	445
<i>L. H. Aller</i>	
An Evolutionary-Significant Group of Eclipsing Variables	449
<i>Jorge Sahade</i>	
Part VII. Summary	
Summary	455
<i>G. Burbidge</i>	
Index	459
